Hi Guys,
I think (after several hours of work), I have a fairly good list of clubs by county, in the links section. Please look it over. If you are aware of any that I have missed, please let me know.

73,
Don, W9DEW

Topic: 4 Message: 4

Greetings!

I don't live in Indiana but I'm close enough. Urbana IL is a half hour away and I have operated portable from various Indiana locations. I've been eyeing the hill just outside of Danville, IN for hilltop microwave operations.

Hopefully this group grows and we can stay in touch!

73, Zack W9SZ

5. Indy Ham Radio Map -Repost

From: Don West
Topic: 5 Message: 5

(Sorry, the link didn't work because the period at the end became part of the link. This one should work OK. Don)

Indy Area Hams,
Just came across an interesting site that will let you post your location on a map of Indiana. I started a map for us at: http://www.frappr.com/indyhamradio .
Enter your name and call in the name box, your zip code in the zip code box, and something in the shoutout box. (You won't be posted if you don't put "something" in the shoutout box. My suggestion would be your interests.)
Of course it would never happen, but wouldn't it be interesting to see where all the Hams in the state are located?

73,
Don, W9DEW

6. VE Testing

Yahoo group: IndyHamRadio
Date: 2005-10-28 14:54:50 UTC
From: mike_n9mg
Topic: 6 Message: 6

The Kokomo Amateur Radio Club conducts VE testing on the fourth Sunday of every other month. Our schedule can be found at www.kokomohams.org or www.arrl.org. We have been testing hams and prospective hams from all over Indiana lately. There seems to be a shortage of test sites, and/or sessions lately. If you need to take a test, or know of anybody who does, you can contact me at n9mg@... . Because of the Christmas holiday, our next test session is scheduled for December 18, 2005.

73s,

Mike N9MG

What do you mean by "ATV"? Are you running radios on all terrain
vehicles? My friends and I are doing that with handheld radios and an
FT-817.

I think they are discussing Amateur Television (on the 540 portion of the spectrum). I don't know of anyone active in the area. It's bit a a stretch to think you might get back to the Indy area. There is usually activity on the ATV repeater located at Post and 70 on Sunday evenings. There was some activity in Lafayette but it has been several years since I have been active in that mode. Don Miller, W9NTP, Wyman Research, is the "big" gun around this area. Waldron, Indiana. His equipment is on the ISS

14. Gerald Ray Crow, NW4T SK

Yahoo group: IndyHamRadio
Date: 2005-11-08 04:43:03 UTC
From: Don West
Topic: 14 Message: 14

(This from Jim Mason, W4RCX, just accross the Ohio River.)

Gerald Ray Crow, NW4T, 67, of Utica, (Daviess County) Kentucky died Saturday, Nov. 5, 2005, from a fall from his tower at his home while working on an antenna in preparation for the ARRL November (CW) Sweepstakes.

Gerald had been a ham for over 40 years and loved to work CW. He participated in the 2005 Field Day under the call of KY4CW which finished in first place in the Great Lakes Division and fifth nationally in class 1A.

He was a long time member of the Owensboro Amateur Radio Club and an Elmer to anyone who needed help, especially learning CW or with an antenna project. He was retired from Maxell Corporation of America where he worked as an electrical engineer.

Survivors include his wife of 46 years, Sally Nalley Crow of Utica; a son, Robert Todd Crow of Beaver Dam; a sister, Susan Carol Frank of Versailles; four stepgrandchildren; three stepgreat-grandchildren; a brother, William Lee Crow of Hartford; a sister, Patricia "Patty" Jolene Burden of Hartford; and several nieces and nephews.

Services are at 2 p.m. Tuesday at Miller-Schapmire Funeral Home in Hartford, Kentucky. Visitation will be from 4 to 8 p.m. today (Monday) and after 9 a.m. Tuesday at the funeral home. His wife, Sally, has asked that expressions of sympathy take the form of donations to the Owensboro Amateur Radio Club, c/o Steve Morgan, 1124 W. 12th St., Owensboro, KY 42301.

73,
Jim Mason, W4RCX
OARC President

15. Volunteers Needed in Vanderburgh and Warrick Counties

Yahoo group: IndyHamRadio
Date: 2005-11-08 04:54:23 UTC
From: Don West
Topic: 15 Message: 15

(This news from David L. Pifer - N9YNF, Indiana Section Emergency Coordinator)

Volunteers Needed in Vanderburgh and Warrick Counties

As many of you know, early Sunday morning November 6, a Tornado swept through the Vanderburgh and Warrick Counties in South-Western Indiana. Our hopes and prayers for all affected there.

Amateur radio has been involved with various aspects of the response from the beginning. Presently the Salvation Army is planning to dispatch 5 to 6 portable kitchens in the area for the care and feeding of clean up workers and those affected by this event. These kitchens will be distributed across a 30 mile area and will need Amateur Radio support for their activities. The kitchens will be operational from 7am until 7pm local time starting Tuesday November 8 for several days.

Staffing will be in shifts and based upon your availability. If you are near the area and available to assist with this operation, contact Bob Pointer N9XAW at 812-431-5054. Your assistance is needed.

Yahoo group: IndyHamRadio
Date: 2005-11-09 13:57:04 UTC
From: Don West
Topic: 18 Message: 18

(This in from Nick - N9NQW)

There will be a Hamfest meeting on December 3rd at 10:00 am at the Miami County EMA office. This meeting is a joint venture of the Greentown Hamfest Committee.

On the agenda will be the following:

This purpose of this meeting is to get the following clubs involved with the hamfest and make it a Central Indiana hamfest.

The following clubs have been contacted:
Logansport Amateur RadioClub
Wabash County Amateur Radio Club
Plymouth Amateur Radio Club
Tipton County Ham Club
Lafayette Amateur Radio Club
Grant County Amateur Radio Club

We need as many members of the above mentioned clubs to attend this meeting would especially like to see the Officers of each club attend).

We will send out more information as the time gets near. Along with directions to the Miami County EMA office.

Hope to see you there.

31. Fun Stuff

Yahoo group: IndyHamRadio
Date: 2005-11-19 02:04:14 UTC
From: Don West
Topic: 31 Message: 31

IndyHamRadio Members,

I just a quick note about some fun things to do.

** Post your photo or your club's photos in the Photo section. Thanks to the Hendricks County HCARS for their pictures! Photos of you or your station or other pictures of interest to Indiana Hams are welcome.

** I was not sure what to expect in terms of growth for this group, but since it was started twenty days ago, it has grown to forty-six members. (Someone tell me if that is bad or good.) If you like what is going on, you can help the growth by going to the INVITE section and sending invitations to those you think may be interested or you can put a link to this group on your web page from the PROMOTE option.

** There is a map site exclusively for this group at: http://www.frappr.com/indyhamradio where you can show your location to the rest of the members. Enter your name and call in the name box, your zip code in the zip code box, and something in the shoutout box. (You won't be posted if you don't put "something" in the shoutout box. My suggestion would be your Ham interests, but that is up to you.)

** Meetings or discussion groups - If you would like to discuss a topic of interest with other hams, you can post a time to meet in the "Chat" area and have a keyboard to keyboard discussion.

** As always, your comments, suggestions and feedback are welcome and encouraged.

73,

Don, W9DEW

32. Indiana Radio Club Council announces 2005 Outstanding Amateur of the Year

Yahoo group: IndyHamRadio
Date: 2005-11-20 21:34:14 UTC
From: Don West
Topic: 32 Message: 32

For Immediate Release 11-19-05

2005 IRCC OUTSTANDING AMATEUR OF THE YEAR

Jim Edwards, KA9DIF

Itâ☐☐s with great pleasure the Indiana Radio Club Council presents the
2005 OUTSTANDING AMATEUR OF THE YEAR award to Jim Edwards, KA9DIF.

Jim has been active in amateur radio for over two decades. He
continues to lend his expertise as a volunteer examiner to the Wabash
Valley Amateur Radio Association.

Jim is the director of the Ryves Hall Youth Center, a facility for
underprivileged children, here in Terre Haute. Since becoming director
in 1982, Jim has been a positive role model to countless children in
the Terre Haute area. Amateur Radio is an important part of the his
life and that of his family. Three members of his family are licensed
as well.

Our outstanding amateur of the year is always ready at a momentâ☐☐s
notice to aid local Amateur Radio projects. Earlier this year, on
short notice, he stepped in and offered his facility for the local ham
radio Tailgate swap meet..

Over the years, Jim Edwards has demonstrated a dedication and passion
for bringing Amateur Radio to underprivileged kids. Under his
direction, his school has developed a thriving Amateur Radio program.

With the help of a few others, his school has expanded it's curriculum
beyond the classroom by holding regularly scheduled Technician
classes. Those extracurricular classes have lead to Amateur Radio
licenses for many under privileged youths and some of their parents as
well.
His ability to discover and take advantage of various grants and
donations has provided funds to build a complete Amateur Radio station
at his educational facility covering 2 meters, 70 centimeters and HF.
Jim has also organized a school Amateur Radio Club, with the call sign
KC9EKW (every kid wins).

With such a distinguished background itâ☐☐s easy to see why not only the
kids win, but his community and amateur radio as well.

Six nominees from around the state were also honored. They include
Kevin Berlen-K9HX, Clay City, Ernest Clark KB9SKI, Greenwood, Ed
Conder N9IZN, Camby, Peter Crasher W9DRB, Chrisney, Robert Griggs

W9MKA, New Castle and Carl Zager KB9RVB, Bloomington.

I would like to thank everyone for allowing me to be part of this group. I have been a licensed ham for some time now but have not been active for several years. My plans are to get reacquainted with radio by studying for the Extra class license and looking into ARES and other groups. My wife is currently studying for her Technician license. Together, she and I plan on assisting in local events this summer.

Although I am set up for two meters, I have not been active on that band except for an occasional skywarn sign in. I primarily hang out on 20 meters.

Please keep the group posted on upcoming events and possibly favorite ham, storm and disaster related "bookmarks."

Thanks again,

Greg
N9VKZ

35. When are the IRA and ICE lunch gathering happening???

Yahoo group: IndyHamRadio
Date: 2005-11-27 15:13:49 UTC
From: n9nwo
Topic: 35 Message: 35

There have been regular lunches and breakfast meetings in the Indy area. There is a group in the IRA (.70) that has a regular lunch every week and a breakfast once a month. I think that N9FEB sort of ramrods this activity.

The ICE folks also have a regular lunch gathering.

Could someone post when these lunches, and especially the breakfast, are going to happen?

Is W9ICE still active on VHF? I've missed them in the last couple VHF contests.

Re: KC9FZP Dennis D Smith, Versailles IN. 47042

Fr: W8NSV

It is with great sorrow that I send this message to you.

Friday, 25 Nov, 2005. 11:00 AM, KC9FZP past away peacefully
in his home.

He passed away holding his baby girl in his arms and the
hand of his wife Marla. He was suffering lung cancer and
thought it was in re-session. But it reappeared and took
his life Friday Morning.

Dennis was a young man, whom enjoyed motorcycles,
and racing car's. His passion was of course in Amateur
radio, and had just moved to his new Home with his wife and
child. KC9FZP...Always gave his call over the air as KC9FZP
and would explain..."You know, like "Frank Zappa."

I enjoyed talking to him and had many a great conversation.
Although,
I never had the pleasure to meet him, KG4NMH and myself
had spoken many times with him. I don't think there was
anyone he didn't know, or didn't like? Dennis will be missed
by many. He lived in South Eastern Indiana, and was will
known by the Ripley County Indiana Amateur Radio Club as his
wife Marla, is also an amateur.

I have no further information to add, but I'm sure if you
want to contact the Ripley Co Amateur radio club, they will
be more than happy to offer further details.

CQ, CQ, KC9FZP, This is the final call on 147.285MHz,
Our hearts and prayers go out to your family.
You will be missed my friend. 73's Dennis. W8NSV.

W9ICE has repeaters on 146.970, 442.650 (has the most activity) and
53.110

Here is Mike's (N9FEB) web site, IndyHams.org,
http://www.indyhams.org/
It is a great source of information.

I was referring to their weak signal SSB/CW activity in the VHF contests. I always worked them every contest up till the last couple. Haven't heard them recently in the contests. I was wondering what bands they have now if they're still doing the contests. I am active on all bands from 50 through 10368 MHz CW/SSB with 24 GHz on the way.

I'll be active in the January ARRL VHF Sweepstakes.

I operated in the 10 GHz contest second weekend from Whiting Beach on the shore of Lake Michigan. There are some other neat Indiana locations in that area to operate from including Ogden Dunes and Beverly Shores. I can post some photos of my September 2005 operation in the group photo section if anyone is interested.

I held my first GPS Lunch Hunt today. 15 GPS-ers showed up! It was fun and we had good food.

I had sent out coordinates to a location, to where each had to go and call on a simplex freq to get the final coordinates.

We shared lots of stories and had a good time.

I look forward to hosting the second Lunch Hunt in a couple of months.

Interested? Send me an email ... N9FEB@... ... to get on the email list.

Mike

There are some problems with the database. Avon is shown on the map as Glenwood, IN. Both my old and current callsigns are shown as current. Some callsigns for other hams only show the old callsign, not the current callsign. Some callsigns are in the database twice.

I am about to become a new PSK31 user and was wondering what the thoughts are regarding using an old TS-820 with a SignaLink SL1+?

I'm going to purchase: http://www.tigertronics.com/
1. SL1+4R (4 indicates four pin round mic)
2. A special sale includes the "Slassy" optional cable accessory kit.

Questions:
1. Has anyone had any experience with this set up?
2. Are there any cable requirements that I over looked?
3. Is there anything else I need to purchase? I have the sound card with 1/8" input jack.
4. Will this also work with my Yaesu VX6R?

Sorry for the rookie questions, I am trying to get back into radio.

Thanks,

Greg

I have only used the soundcard modes with my TS-440S and TS-850S. I think this Tigertronics box shold do fine with thenTS-820, though.

> 2. Are there any cable requirements that I over looked?

No, it appears you only need the 4-pin DIN connector and cables to connect to the soundcard on your computer.

> 3. Is there anything else I need to purchase? I have the sound card
> with 1/8" input jack.

Not for the TS-820.

> 4. Will this also work with my Yaesu VX6R?
>

I have never seen a VX6R, but looking at what's available on the web, it appears it uses a special 1/8" 4-conductor connector for the external mic/speaker. You'd need a cable with this special plug on it. If you have that, it should work with that radio, too. But you wouldn't be using PSK, MFSK, Hellschreiber, etc. with an FM radio. You'd be using packet.

I have used the RASCAL from BuxComm for many years and have a number of friends that use them too. They work great, and they are inexpensive. I use it for all variants of PSK, packet, hellscriber, SSTV, RTTY, APRS and EchoLink.

You can get a fully assembled RASCAL with a custom cable for you TS-820 for $36! A second custom cable that just plugs in for your VX6R is only an additional $20. So, for less than the Tigertronics you can get the unit and two custom cables.

I contacted BuxComm and it seems like this little RASCAL will do the job for me...especially for the price. I am clear on what to get for the TS820, however, they did not have any cable to accomodate the VX6R microphone adapter. I would think this would be a simple shielded cable with one 1/8" female and one 1/8" male connector. Does anyone have any suggestions?

Thanks and don't overwork yourself in the snow, especially first thing in the morning.

Greg

you can search QRZ by zip code as well.. http://www.qrz.com/

Don West <Don-West@...> wrote: Hi Dave,
There is a site at the University of Arkansas, Little Rock Campus
Amateur Radio Club, that has a very effective zip code (and other)
search engine. http://callsign.ualr.edu/index.shtml
Give it a try.

From: David Spoelstra
Topic: 52 Message: 57

The VX6R uses a single 4 conductor minature plug that has microphone audio, earphone audio, PTT, and ground. I'm guessing that the BuxComm "YX" cable would work, but I can't tell for sure since the Yaesu manual doesn't have a pinout for the 4 conductor plug.

If you have the optional Yaesu "CT-91 microphone adapter" then it looks like you would use the BuxComm "VX" cable.

Subject: [IndyHamRadio] Re: PSK31

I contacted BuxComm and it seems like this little RASCAL will do the job for me...especially for the price. I am clear on what to get for the TS820, however, they did not have any cable to accomodate the VX6R microphone adapter. I would think this would be a simple shielded cable with one 1/8" female and one 1/8" male connector. Does anyone have any suggestions?

Thanks and don't overwork yourself in the snow, especially first thing in the morning.

Greg

Many people call these tornado sirens, but nevertheless, in Marion County, they need physically checked.

I am asking for everyones assistance on Fridays, at 11am for volunteers to report on sirens functionality to the 146.700 net, that runs at 11am on Fridays.

At IndyHams.org, you will find maps and spreadsheets of all the siren locations (137) and I am asking for anyone to report on the sirens. The spreadsheet shows, in orange, which ones really need checking first.

Please help make the county safer by reporting.

Thanks,
Mike Palmer, N9FEB

Interesting note on your sirens...we too members of the Whitley County Amateur Radio Club (WCARC) have been checking sirens on a regular based schedule for a number of years now.

Generally twice per month on a Monday unless storms or other potential problems exist at the time.

One thing that was noted over the years is those rotating sirens in my opinion only are not as reliable as the old fixed units. The reason I believe this to be so is they are both mechanical and electrical. Mechanical things can fail too.

We basically check the following:

1. The physical integrity of the siren site for damages to any of the structure, receiver box & antenna etc.

2. If the siren sounds off?

3. Does it rotate?

4. Does it stop?

We have experienced numerous failures in all areas. Some damages were not necessarily vandalism but a result of accidents or other unrelated construction projects.

The net control for this session usually checks a siren too but collects all of our reports and forwards them to the proper authorities.

Tippecanoe Amateur Radio Association (TARA) also assist the
Tippecanoe Emergency Management Agency (TEMA) with siren tests.
Siren tests are done of the 1st Saturday of each month at 11 am.

We, like you, are concerned with does the siren sound, rotate and
turn off. Thus each observer have to be able to see the siren in
order to note rotation.

I like Mike's web site (http://www.IndyHams.org) as it has so much
information. That he has each siren site noted is very helpful. I
wish that we had such public information here in Lafayette.

65. Starke County Amateur Radio Club

Yahoo group: IndyHamRadio
Date: 2005-12-11 20:52:00 UTC
From: John Poindexter
Topic: 65 Message: 65

SCARC meets at 7:00 p.m. on the third Thursday of each month at the American Legion Post in North Judson, Indiana. The Legion is located north of the Brantwood Restaurant off highway 10.

Amateur Radio is growing in Starke County. Our last class (last year) graduated 10 new hams and this year's class has 8 students, with one already passing the tech and general written tests.

Even though there are more than fifty hams in the county, only about a dozen or so participate in activites. That is why we are trying to build the ham population.

SCARC 2 meter net meets on Saturday at 8:00 pm Indiana time. Frequency is 145.410 with a 131.8 pl tone.

The club web site is under the club's call sign. www.w9joz.org

Check it out as there are several pages of interesting reading. To include: newsletters, special event pages, meeting minutes, etc.

Topic: 59 Message: 66

I have heard the siren test in the past and have monitored the net but was not able to respond fast enough. I will help in the future. However, I question how many sirens can be checked during one test(four times a month).

Would it be more beneficial to have a test at 11am and another at 11:15? Since the siren locations are within close proximity, double coverage may be achieved. That way a full function test on every siren may be completed safely at least once every month.

I thank ARES and all of the participants for running the "siren" test. I hope to plan accordingly and assist in the future.

Most PSK31 etc. is done with radios in the SSB position. You could do it with FM on VHF but that kind of defeats the purpose of these modes (narrow bandwidth).

All sorts of software can be downloaded from the links at:

http://www.westmountainradio.com/links.htm

Try Digipan; it's one of my favorites and allows copying of as many as 20 PSK transmissions at once!

On HF, most PSK operation is about 70 kHz up from the bottom of the band (i.e. 3570, 7070, 14070, etc). Most Hellschreiber is around 60 kHz up from the bottom. Most MFSK16 is mixed in with the RTTY from 70 to 85 kHz or so up from the bottom of the band.

The easiest radio I've seen so far for these "soundcard modes" has been the Kenwood TS-440S. It has two RCA jacks on the rear for transmit and receive audio you can simply connect to your soundcard with two cables that have RCA plugs on one end and an 1/8" plug or an adapter on the other end. And it's one of the few radio that can handle 100% duty cycles on transmit for extended times without overheating.

I hope this helps!

I rcvd and hooked up the RASCAL using the DigiPan softare and it works
pretty good. It is alot more sensative then WinPsk 2.13. There is
alot of communication on 14.070. I'm still working on getting this
rascal to transmit. When I transmit my radio "relay" keeps turning on
and off. Could this be a ground loop? Any suggestions like ...read

the manual.

In addition, I heard theres a PSK31 contest this weekend.

Thanks for the help.

I doubt it. Probably pilot error. What rig are you using? What do you
have hooked to what?

>In addition, I heard theres a PSK31 contest this weekend.

Yes, one of my alltime favorites! The PSK31 Death Match!
http://www.mdxa1.org/deathmatch.html If you get into contesting, then
you'll definitely want to make sure you stop by one of the HDXCC meetings in
Indy. www.hdxcc.org Our next meeting is January 12th.

If you want to run a PSK31 contest, then I suggest using N1MM www.n1mm.com
or WinWarbler at the very least.

Please see if the rascal is connected properly:
Rascal is connected to the soundcard mic (green) and speaker out (black).
Rascal is connected to PC serial port
Dual cable connects from rascal to Transciever (TS820) four pin mic AND phones zack.
Question: Is the serial port cable needed?

NOTE: The only time I hear the "relay," which sounds more like a auto blinker, is when I operate VOX.

Dave I will keep the meeting in mind. I believe I heard the last meeting being talked about on 2 meters.

Thanks for the help!

77. Ham radio STUFF from estate

Yahoo group: IndyHamRadio
Date: 2005-12-30 13:46:03 UTC
From: Mary Tinder
Topic: 77 Message: 77

Folks, I posted once before but lost replies. We have a large quantity of ham radio equipment, ocilliscopes, testing equip, electronics, old heathkit stuff, electronic parts,wire, electric cabinets, connectors. Someone could take this stuff and use or take the time to post on ebay and resell?

This came from a house in Fortville and the operator was Marshall Cole. There are still some antennas at the house that are available.

We'd like to find someone who might appreciate this equipment and supplies. There is a lot of stuff and hopefully one person will take it all. Too much to keep unless you have a large barn like Marshall did to accumulate all this.

You may contact me privately at mtinder@... or 317 697-4200.
We have since moved everything to our shop off 56th st and Keystone area.
Mary Tinder

Whoops!!
The Hoosier DX and Contesting Club has changed it's meeting site and I failed to update the calendar.

They are now meeting atDookz Sports Grill which is near 96th and Keystone. The actual address is 3855 E 96th ST and it's on the South side of 96th.

The new place is smoke free and allows kids. We have a room that you can actually shut the doors and it has a projector screen.

Here's a link to the new info on our site:
http://www.hdxcc.org/meetings/maps.html

Sorry for any inconvenience,
Don, W9DEW

85. 146.610 Scott County Emergency Management net

Yahoo group: IndyHamRadio
Date: 2006-01-10 02:49:19 UTC
From: Don West
Topic: 85 Message: 85

(This invitation is from Dan K9ZF <n9rla@...>)

I would like to invite everyone in the southern Indiana area to join the
Scott County Emergency Management weekly net. The net meets every
Tuesday at 7:00pm local time on the 146.610 repeater.

We started the net a couple of months ago to try to build activity in
the area and organize volunteers for Scott County Emergency
Management.
It started slow, but has really built up to a nice group over the last
several weeks. Last week we had 19 check ins, and this week we are
trying to break 20!

The repeater has excellent range. We commonly get check ins from
Seymour to New Albany, and Madison to Salem. And I'm sure we could do
better. I'm acting net control this month, so stop in and say hi!!

Tuesdays
7:00pm [00:00z]
146.610- repeater
103.5 hz tone required.

73
Dan

88. 2006 Mini Marathon; Sat May 6th

Yahoo group: IndyHamRadio
Date: 2006-01-16 22:29:30 UTC
From: n9feb
Topic: 88 Message: 88

This year, I will be coordinating the use of nearly 100 amateur radio operators in this years' Mini Marathon on Saturday, May 6th. As of right now, I have 41 signed up, leaving 59 to get.

If you volunteered last year, and want that same position this year, let me know now, or I will assign as needed.

All maps and signup logs are available for view at IndyHams.org

Please visit this site and help with this event.

We will be using 5 Net Control operators on 5 different frequencies.

Thanks for your support!

Mike Palmer, N9FEB
Marion County ARES EC

92. Central Indiana Severe Weather Symposium

Yahoo group: IndyHamRadio
Date: 2006-01-20 01:15:23 UTC
From: Don West
Topic: 92 Message: 92

Hello Weather Spotters -

This email is your official invite to the Central Indiana Severe Weather Symposium. The Symposium will be held from 8:00 AM - 4:00 PM on Saturday March 18th 2006, and will be held at Creekside Middle School in Carmel IN.

This is a great event for all spotters and any weather enthusiast. It is open to the general public, including students, weather spotters or anyone wanting to learn more about sever weather. An 11X14 poster is attached to this email, and feel free to print out and post this information.

Many speakers will be participating in this day long spotter talk, including

Rich Thompson, Lead Forecaster from the Storm Prediction Center
Jon Davies, Severe Weather Researcher from Wichita KS
Dr. Jeff Trapp, Purdue University
Dr. David Arnold, Ball State University Storm Chase Team Leader
Madison County and Indiana Department of Homeland Security
Ken Brewer, WISH TV Meteorologist
To Register for this event, visit
http://www.crh.noaa.gov/images/ind/symposium.pdf

Registration fees for the event include lunch:

$20.00 - Registration postmarked by February 18
$25.00 - Registration after February 18 or at the door
$15.00 - Students
$10.00 - Students that present during poster session.

More information can be found at www.weather.gov/ind

Thanks and hope to see you there!

(There is a copy of the flyer for this program in the "files" section of this group.)

The Tri-State Amateur Radio Society in Evansville will be hosting an
Amateur Radio Class for those wishing to earn their first Amateur
Radio License. If you know of anyone interested, please ask them to
contact Bob Pointer, N9XAW, at n9xaw@....

Classes will be held on Saturdays beginning March 11th at 9:00 AM.

Classes will be held at the Evansville Red Cross, 29 S. Stockwell.

Registration is required.

For more information email:
Bob Pointer, N9XAW - n9xaw@...

General and Extra Class Elmers will be available for those studying
to upgrade their license.

98. Brad Hensley, AB9JD missing since Jan. 12

Yahoo group: IndyHamRadio
Date: 2006-01-25 04:41:42 UTC
From: Don West
Topic: 98 Message: 98

-------> From WISH TV NEWS <--------

Police Looking for Missing Plainfield Man
Jan 23, 2006, 06:55 AM EST

According to FBI statistics, men are more likely than women to be reported missing. Plainfield Police are working such a case. A 29-year-old man has been missing for 10 days. Now, they're asking for the public's help.

"I feel someone has to know something. You can't just disappear," Kristin Hensley, wife of the missing man, said.

But it appears that 29-year-old Brad Hensley has vanished.

"Just praying that God's going to bring him home," Kristin said.

Flyers are scattered throughout Hendricks County and southeastern Marion County asking for help finding the Plainfield man. Brad's neighbor was the last person to see him drive along 267 on his way to work. That was January 12th. No one has seen him since.

He worked on the east side of Indianapolis near 30th and Post. Brad and his wife Kristin usually called each other several times during the day but on the morning of January 12th a call came that she wasn't expecting.

"He was supposed to be at work at seven and they called at 7:30 and said he never showed up," Kristin said.

"We're kind of baffled right now what had taken place. What were the steps that had taken place on his way to work, since he never made it there on Thursday morning," Sgt. Jill Lees with the Plainfield Police Department told News 8.

Friends and family began calling Brad's two cell phones. "Nothing's been missing from the house. He hasn't used his cell phones or his bank card. He doesn't have a credit card," Kristin said.

His red Jeep Wrangler is also missing. Kristin says it has a black top and a Red Cross sticker in the wind shield.

Police call the case puzzling. "Typically in those cases they might show up, might just miss a phone call, but there's been no communication whatsoever. His phone has not been used or anything that might you know lead to the fact that he's out there and has just not communicated with his family," Sgt. Lees said.

Family members want the word out to the public and to Brad. "Just to please call me. Let me know that he's ok and that I love him," Kristin said.

The 2005 Jeep has a license plate number of 20516-V. Anyone with any information is urged to call the Plainfield Police department at 839-8700.

------> From: Michael R. Palmer, N9FEB <------

Please help look for Brad Hensley, AB9JD.
Brad was a Red Cross DRG member, assisted in many Hendricks County events as well as Marion County events, including the mini-marathon.
I drove I-70 from SR-267 to I-465, going onto I-465 around to I-70 to Post Road today. No sign of any vehicle going off-road.
KC9HMO is looking around the 30th / Post area for the 2005 Red Jeep Wrangler.
If anyone sees this vehicle, contact Plainfield Police.

National Weather Service Indianapolis NEWS
FOR IMMEDIATE RELEASE
January 30, 2006

Contact: Dave Tucek, NWS, (317) 856-0368
Dave Warren, Director, HCEMA, (317) 745-9229

Severe weather storm spotter training scheduled for February 18th

What is Indiana's severe weather season going to be like this year? "It doesn't matter," said Dave Tucek, Warning Coordination Meteorologist from the National Weather Service in Indianapolis. "What does matter is that everyone is prepared and responds whenever severe weather occurs."

The National Weather Service, working with the Hendricks County Department of Emergency Management and the Hendricks County Amateur Radio Society, will conduct severe weather storm spotter training from 1 p.m. to 3 p.m. Saturday, February 18. The training will be held at the Hendricks County Government center at 355 S. Washington Street in downtown Danville.

Tucek will describe cloud and wind patterns associated with severe weather, how to interpret weather radar data, and how to remain safe during severe weather. The training session is free and is open to the general public.

"Awareness and preparedness are keys to weather safety," said Dave Warren, Director of Emergency Management for Hendricks County. "And volunteers monitoring the sky and reporting severe weather helps increases everyone's safety," said Warren.

The National Weather Service is also co-hosting the Central Indiana Severe Weather Symposium from 8 a.m. to 4 p.m. Saturday March 18 in Carmel, Indiana. More information may be found at http://www.weather.gov/ind.

107. Urgent -- HDXCC Meeting Date Change

Yahoo group: IndyHamRadio
Date: 2006-02-06 22:02:54 UTC
From: Don West
Topic: 107 Message: 107

(From David Spoelstra) The February meeting has been moved to the 16th! Someone else came along and guaranteed $300, so we got bumped.

The owner was very accommodating and tried to come up with several ideas for putting us in other areas, but because Mike is going to do a presentation, I decided it was best to move to the following Thursday so we could have the closed room with the projector.

The owner (Debbie Taylor) was very apologetic and said that she had never had to bump anyone before, but they guaranteed the $300.

She even went so far to say that if we show that we consistently spend over $300, she would not require a guarantee and permanently give us the room.
BTW, we spent over $300 the last meeting. So, we need to keep having good turnouts and we'll have the room permanently.

-David

109. Another Ham Radio Class this spring

Yahoo group: IndyHamRadio
Date: 2006-02-08 04:46:00 UTC
From: clark_ernest
Topic: 109 Message: 109

The annual Technician license class taught on the south side will
begin on March 7 in Franklin.

Instructor: Ernest Clark, KB9SKI

Location: basement conference room at the Johnson County Emergency
Operations Center, 1111 Hospital Road, Franklin

Times: Tuesday, March 7, 7:00-8:00 with optional hands-on stuff after
8PM, and following Tuesday nights through the end of April

Textbook: Now You're Talking, 5th Edition. $20, or $15 if you
contact Ernest soon enough to use his instructor discount.

Other costs: The class is taught for FREE. The license exam costs up
to $14 whenever you decide to take it, and of course radio gear costs
whenever you decide to buy it. Getting started for $100 overall is
doable.

For more details: write the instructor at hamclass@...,
or go to www.midstatehams.org

Subject: Indiana BPL legislation alert

Mr. Sellers,

I want to alert you to BPL legislation that may be added to the telecommunications deregulation bill, Senate Bill 245 in the Indiana House of Representatives. In a committee hearing held yesterday, an amendment to SB 245 was proposed that would promote BPL in Indiana by allowing electric utilities to pass on a large amount of the BPL construction costs to their electricity customers.

I objected to the amendment based on interference issues and the cross-subsidy of BPL by electric ratepayers.

The chair of the Technology committee agreed to remove the BPL provision, but reserved the right to propose it as an amendment before the entire house on the 2nd reading of the bill. You may want to alert hams to this possibility so they can contact their representatives. I expect the bill to be on second reading on Thursday, February 16th.

Matt Pierce
State Representative
District 61
N9VKU

115. Henry County Weather Spotter Training March 11th

Yahoo group: IndyHamRadio
Date: 2006-02-14 00:48:01 UTC
From: Don West
Topic: 115 Message: 115

The Henry County Amateur Radio Emergency Service in cooperation with the National Weather Service (NWS) and the Henry County Emergency Management Agency is sponsoring the SKYWARN Storm Spotter Training Class. SKYWARN training is open to anyone that has an interest in weather and has a desire to help in this public service effort. The training will be held March 11th, 2006, at the Henry County Justice Center, Emergency Operations Center, which is located at 1215 Race St., New Castle, Indiana at 9:00 A.M. SKYWARN is a partnership between the National Weather Service and the community, designed to help reduce the threat from severe weather. The key element of this partnership is a network of volunteer non-NWS personnel ("storm spotters") who relay reports of severe weather to the NWS. Even with today's new technology at our disposal, only one instrument can detect severe weather phenomena directly with absolute certainty, the human eye. A large network of spotters can be a great benefit to the NWS warning program. The basis for, and/or verification of, many severe weather warnings, issued by the NWS, may be directly attributed to SKYWARN storm spotters. Their reports are considered highly credible by NWS personnel, and are regarded highly. They assist the NWS in performing its top mission, which is to prepare and distribute warnings and forecasts of impending severe weather. SKYWARN Storm Spotters help to provide the citizens of their community with potentially life-saving information. In the training class, information will be presented on many aspects of severe weather including the various types of thunderstorms, tornadoes, hail, lightning, flooding, and Storm Spotter safety precautions. Also, the spotters will be trained on what information to report back to the NWS. For More Information Contact: Henry County Amateur Radio Emergency Services 107 South 12th Street, C/O Henry County EMA, New Castle, In, 47362 Cell Phone: (765)524-9541 Email: rgriggs@...

123. Indiana QSO Party May 6th & 7th

Yahoo group: IndyHamRadio
Date: 2006-02-28 01:34:42 UTC
From: Don West
Topic: 123 Message: 123

The Indiana QSO party will be held 1600 Z Saturday 6 May to 0400 Z Sunday 7 May... overlaps with NEQP and MARAC and a few other QSO parties

As usual, the rules are posted at www.hdxcc.org/inqp

This is EARLY notice so you can mark your calendar and get all the yard work done and appease the XYL.

If you're a bit adventurous, you can try mobiling through Indiana. We don't have as many counties as Illinois, so you wouldn't have to drive far to put on a fair percentage of them. I'd really like to add some new calls to the mobile/portable map this year.

Thanks

Mel KJ9C
INQP Mobile Coordinator

127. Severe Weather Preparedness Week in Indiana

Yahoo group: IndyHamRadio
Date: 2006-03-02 22:36:38 UTC
From: Don West
Topic: 127 Message: 127

(Credit to the Johnson County Mid-State Amateur Radio Club Website for this information.)

From Tug Sutton, County EMA Director

Governor Daniels has proclaimed the week of March 5-11 as Severe Weather reparedness Week. In conjunction with this proclamation, and in cooperation with the National Weather Service, IDHS, Indiana Department of Education, and the Indiana State Police, March 8, 2006 has been selected as the date for the Statewide Tornado Exercise. Should severe weather be a threat on March 8, the test will be held on March 9. The County Commissioners have also proclaimed March 5-11 as Severe Weather Preparedness Week in Johnson County.

There will be 2 drills initiated this year by the NWS. The first will be initiated sometime between 10:00 AM and 10:30 AM, primarily for the benefit of school participation, and the majority of the work force, who are located at their place of employment at that time. The second initiation will occur between 7:00 PM and 7:30 PM, and will allow families the opportunity to practice their own personal plans within their home.

Both drills will be initiated by a "Test-Tornado Warning" announcement. However, there will also be a "Test-Tornado Watch" issued in advance of the "Test-Tornado Warning" announcement. DO NOT INITIATE THE DRILL UNTIL THE TEST-TORNADO WARNING IS ISSUED.

Marion County ARES EC

136. FW: Severe Weather Awareness Week Reminder

Yahoo group: IndyHamRadio
Date: 2006-03-08 14:28:14 UTC
From: Don West
Topic: 136 Message: 136

----- Original Message -----
From: "David Pifer - N9YNF" <n9ynf@...>
To: <inham@...>
Sent: Tuesday, March 07, 2006 11:03 PM
Subject: [InHam] Severe Weather Awareness Week Reminder

Governor Mitch Daniels has proclaimed March 5 -11, 2006 as Severe Weather Preparedness Week in Indiana. A statewide test of communications systems and preparedness drills will be held on Wednesday, March 8th between 10:00 AM and 10:30 AM EST and again between 7:00 PM and 7:30 PM EST.

The National Weather Service will be working in conjunction with the Indiana Department of Homeland Security, Indiana State Police, Indiana Department of Education, Indiana Department of Transportation, American Red Cross, broadcast media and amateur radio operators.

The goals of Severe Weather Preparedness Week are to educate about the hazards of severe thunderstorms and tornadoes, to help everyone be prepared when severe weather strikes, and to have an understanding of severe weather terms and tornado safety rules. Daily statements will be issued on news wires and NOAA Weather Radio All-Hazards during the week. Your local National Weather Service office will be available for interviews or questions.

Two Drills will be conducted on Wednesday, March 8th, with each drill consisting of a Test Watch issued by the Storm Prediction Center
and disseminated by local National Weather Service offices serving Indiana, and then Test Warnings issued by National Weather Service offices serving Indiana.

The first test watch will be issued around 10:00 A.M. EST, with test warnings then issued before 10:30 A.M. EST. The second drill will duplicate the first drill, with a test watch issued around 7:00 P.M. EST
and then warnings following before 7:30 P.M. EST.

The test watch and test warnings will be distributed through the National Warning System (NAWAS), the NOAA Weather Wire Service, news wire services, and broadcast live on NOAA Weather Radio All Hazards (NWR) using the Tone Alert and Emergency Alert System (EAS). Cable television, broadcast television stations, and radio stations should either simulcast the test messages from NWR or EAS, or have the test messages read by radio and television

broadcasters.Please note, for EAS, NWS offices will use the RWT (Required Weekly Test) or RMT (Required Monthly Test) codes to transmit the test watches and warnings, not the TOR code. To ensure receipt, make sure your EAS equipment can accept both the RMT and RWT codes from the NWS.

If weather postpones the tests, the make-up drill day is Thursday, March 9th.

If you have any problems with the drill (e.g. you did not hear the tone
alert or the broadcast), contact your local National Weather Service office immediately.

137. HF activity? Re: [IndyHamRadio] FW: Severe Weather Awareness Week Reminder

Yahoo group: IndyHamRadio
Date: 2006-03-08 14:39:17 UTC
From: Greg O
Topic: 136 Message: 137

Hi David,

Is there going to be any HF activity during this test?

Thanks,

Greg Oberc

Sent: Tuesday, March 07, 2006 11:03 PM
Subject: [InHam] Severe Weather Awareness Week Reminder

Governor Mitch Daniels has proclaimed March 5 -11, 2006 as Severe
Weather Preparedness Week in Indiana. A statewide test of
communications systems and preparedness drills will be held on
Wednesday, March 8th between 10:00 AM and 10:30 AM EST and
again between 7:00 PM and 7:30 PM EST.

The National Weather Service will be working in conjunction with the
Indiana Department of Homeland Security, Indiana State Police,
Indiana Department of Education, Indiana Department of
Transportation, American Red Cross, broadcast media and amateur
radio operators.

The goals of Severe Weather Preparedness Week are to educate
about the hazards of severe thunderstorms and tornadoes, to help
everyone be prepared when severe weather strikes, and to have an
understanding of severe weather terms and tornado safety rules.
Daily statements will be issued on news wires and NOAA Weather
Radio All-Hazards during the week. Your local National Weather
Service office will be available for interviews or questions.

Two Drills will be conducted on Wednesday, March 8th, with each
drill consisting of a Test Watch issued by the Storm Prediction
Center
and disseminated by local National Weather Service offices serving
Indiana, and then Test Warnings issued by National Weather Service
offices serving Indiana.

The first test watch will be issued around 10:00 A.M. EST, with test
warnings then issued before 10:30 A.M. EST. The second drill will
duplicate the first drill, with a test watch issued around 7:00 P.M.
EST

and then warnings following before 7:30 P.M. EST.

The test watch and test warnings will be distributed through the National Warning System (NAWAS), the NOAA Weather Wire Service, news wire services, and broadcast live on NOAA Weather Radio All Hazards (NWR) using the Tone Alert and Emergency Alert System (EAS). Cable television, broadcast television stations, and radio stations should either simulcast the test messages from NWR or EAS, or have the test messages read by radio and television broadcasters.Please note, for EAS, NWS offices will use the RWT (Required Weekly Test) or RMT (Required Monthly Test) codes to transmit the test watches and warnings, not the TOR code. To ensure receipt, make sure your EAS equipment can accept both the RMT and RWT codes from the NWS.

If weather postpones the tests, the make-up drill day is Thursday, March 9th.

If you have any problems with the drill (e.g. you did not hear the tone
alert or the broadcast), contact your local National Weather Service office immediately.

138. For Sale: GAP Challenger DX-VIII Vertical Antenna

Yahoo group: IndyHamRadio
Date: 2006-03-09 17:59:35 UTC
From: Don West
Topic: 138 Message: 138

Indiana Hams,
I have a GAP Challenger DX-VIII Vertical Antenna that is excess to my present needs. This is a great antenna if you have a small lot and cannot get wires in the air. It will work on 130 KHz of the 80 meter band. You can change what part of the band by changing a capacitor; I have three that go with it for various parts of the band.
It also works on all of 40, 20, 15, 12, 10, 6 & 2 meter bands with less than 2:1 SWR. It requires only 3 - 25 foot radials that can be buried or on the surface of the ground. Some guys are recommended, but not required.
SPECIFICATIONS

Bands
80m 40m 20m 15m 12m 10m 6m 2m
Bandwidth -- Under 2:1
Entire band on 40m 20m 15m 12m 10m 6m 2m
80m over 130 KHz; 10m over 1MHz
Height -- 31.5 ft.
Weight -- 18 lbs.
Radiation Efficiency: Exceed conventional verticals by up to 600%
Mount: Ground or elevated. A ground mount is supplied.
Counterpoise: 3 at 25 ft.
Ground Area Required: Fits in 10 ft. by 12 ft. area.

See: http://www.gapantenna.com/challenger.html for more info.

Present price new is $300. I am asking $125 to members of the IndyHamRadio and HDXCC Groups. I will be asking $150 on eHam and QRZ in a week or so.
Pick up in Greenwood (Southside of Indy) or I can meet you at a reasonable distance.
Satisfaction guaranteed.
Contact: Don, W9DEW at w9dew@... or cell 317-490-6987.

73,
Don

156. VE Testing at Kokomo

Yahoo group: IndyHamRadio
Date: 2006-03-22 13:13:35 UTC
From: mike_n9mg
Topic: 156 Message: 156

The notice that there will be VE testing in Kokomo on March 26 is incorrect. If you read the text, you will see that testing take place during the even numbered months. March is the 3rd month. The next test session will be held at the Northcentral Indiana Hamfest. to be held at the Miami County fairground located two miles North of Peru, IN. The date is April 2, 2006. There will be no testing on the fourth Sunday in April.

From: Jack Parker
Topic: 162 Message: 162

April 3, 2006

IRCC Technical Excellence Nomination announcement

Spring is here and it's time for all Indiana amateur radio clubs and organizations to consider one of their own as a nominee for the 2006 IRCC Technical Excellence Award.

For the past five years the Indiana Radio Club Council has selected one Hoosier Amateur Radio Operator to receive this prestigious award during the July Indianapolis Hamfest at Camp Sertoma.

To qualify send a detailed explanation of how this person uses their technical abilities to help their club, community or other amateur radio operators. This award is for the unsung heros that continue to give of their time, talents and technical expertise to make a difference in amateur radio. Please be as detailed as possible when writing the candidates qualifications.

Entries will be judged on technical ability, hours of contribution, individual or organization served and extent of contribution (s). Include an e-mail address for both the honoree and submitting author so we may notify all individuals.

Deadline for entries is Midnight Friday June 9, 2006.

E-mail your entry to: w8ish@... or jparker@...

The Technical Excellence Award will be presented July 8th at the Indianapolis Hamfest.

Our committee looks forward to hearing from you.

Jack Parker W8ISH

IRCC Vice-Chairman

172. ARES IS 100 & IS 700

Yahoo group: IndyHamRadio
Date: 2006-04-20 01:48:09 UTC
From: Don West
Topic: 172 Message: 172

Forward From: Henry Mackey

FYI. For the benefit of ARES/RACES and other interested parties, including amateur radio operators, IS 100 & IS 700 will be given by the Whitley County EMA Director Cathy Broxton-Ball this coming Saturday April 22 The IS 100 will take place at 9:00 AM and IS 700 will follow shortly thereafter. Some of our ARES membership have completed each of these requirements, and we are hopeful that others will be compliant by the end of this session on Saturday.

We are currently working on getting packet established in the county once again. The EMA Director is helping us to acquire laptops, radios, and necessary equipment for remote stations in the field. The
packet station in the EOC is fully operational and is currently operating on 144.950 MHz under the callsign KB9KWX. This is the callsign of the Whitley County ARC, and is officially at this time designated as the club packet station.

The Director would like for us to hold some sort of exercise on a regular basis. While discussing this in private with individual members they have let me know that they feel they are giving enough of their time to volunteer work now. They feel thehobby is turning into another job and is taking up more of their free time than they care to give. So I am skeptical about this coming about. Dave/WB9UNL is still holding the weekly ARES net on Wednesday evenings at 7:15 PM
CDST which is good.

73 de Henry/N9HM

173. Indiana QSO Party, 5/6/2006, 12:00 am

Reminder from the Calendar of IndyHamRadio
http://groups.yahoo.com/group/IndyHamRadio/cal

Indiana QSO Party
Saturday May 6, 2006
12:00 am - 12:00 pm
(This event does not repeat.)
(The next reminder for this event will be sent in 6 days, 23 hours, 53 minutes.)

Notes:
The Indiana QSO party will be held 1600 Z Saturday 6 May to 0400 Z
Sunday 7 May... overlaps with NEQP and MARAC and a few other QSO
parties

As usual, the rules are posted at www.hdxcc.org/inqp

This is EARLY notice so you can mark your calendar and get all the
yard work done and appease the XYL.

If you're a bit adventurous, you can try mobiling through Indiana. We
don't have as many counties as Illinois, so you wouldn't have to drive
far to put on a fair percentage of them. I'd really like to add some
new calls to the mobile/portable map this year.

Thanks

Mel KJ9C

177. Hello, new guy here.

Yahoo group: IndyHamRadio
Date: 2006-04-28 23:43:14 UTC
From: Ken Bandy
Topic: 177 Message: 177

Hello all, I just heard about this group a few days ago, and decided to join up. I am located on the far west side of Indianapolis, northwest of the airport. I have been a ham only since August of 2004. My son (who was 12 at the time) and I were both licensed the same day! I had been interested in electronics and radio since I was his age, but just never did anything about it until a ham friend of mine got him interested in it. Since then, I have been making up for lost time. I upgraded to General class in April of 2005, and then up to Extra this April. By the way, I did both of my upgrades with the help of the classes given at the Hendricks County Senior Center, coordinated by Jay, KK9L.

I enjoy "chasing DX" on SSB and digital modes. Done a lot of PSK31, now experimenting with Olivia and Feld-Hell modes.

My shack is a fairly modest one, my primary HF rig is a Yaesu FT-897D, running into a Windom antenna hanging at 35 to 45 feet.

I am currently a member of the Indy Radio Club, and the IDHS Ham Team. If there are other hams on the west side of Indy, or in Hendricks county, let me know, and maybe we can get together for coffee.

73,
Ken

178. 10' satellite dish available

Yahoo group: IndyHamRadio
Date: 2006-04-28 23:56:31 UTC
From: Ken Bandy
Topic: 178 Message: 178

Hello, I have a 10' mesh satellite dish available to a good home for free! All you have to do is come and get it! This dish is in good shape, as can be seen in the pictures at http://ph.groups.yahoo.com/group/IndyHamRadio/photos/browse/e713 It is less than 10 years old, complete with C and Ku band feedhorns and actuator arm. With some modification, it could be used for EME or AMSAT applications, or it can be used as intended, for TV reception. It was in steady use until about 3 or 4 years ago, when cable became available in our neighborhood.

I would really like to get rid of this dish, because it is located where I plan on putting a tower up for an HF beam!

If you're interested, give me a call at (317)446-3312.

73,
Ken

From: IndyHamRadio@yahoogroups.com
Topic: 173 Message: 179

Reminder from the Calendar of IndyHamRadio
http://groups.yahoo.com/group/IndyHamRadio/cal

Indiana QSO Party
Saturday May 6, 2006
12:00 am - 12:00 pm
(This event does not repeat.)

Notes:
The Indiana QSO party will be held 1600 Z Saturday 6 May to 0400 Z
Sunday 7 May... overlaps with NEQP and MARAC and a few other QSO
parties

As usual, the rules are posted at www.hdxcc.org/inqp

This is EARLY notice so you can mark your calendar and get all the
yard work done and appease the XYL.

If you're a bit adventurous, you can try mobiling through Indiana. We
don't have as many counties as Illinois, so you wouldn't have to drive
far to put on a fair percentage of them. I'd really like to add some
new calls to the mobile/portable map this year.

Thanks

Mel KJ9C

183. New propagation Yahoo Group

Yahoo group: IndyHamRadio
Date: 2006-05-01 23:41:03 UTC
From: Ken Bandy
Topic: 183 Message: 183

I just heard about a new Yahoo Group about radiowave propagation.
The blurb announcing it follows:

>This eGroup will be the home of my radiowave propagation outlooks,
>a place to discuss LF/MF/HF radiowave propagation theory and
>observations, as well as a repository of propagation related
>website links.
>
>While the primary emphasis of this eGroup will be on LF/MF and HF
>radiowave propagation, any propagation mode from DC to daylight is
>permitted.
>
>Questions and requests for assistance concerning radiowave
>propagation for new and old hams alike is allowed and encouraged.
>
>--... ...--,
>Thomas F. Giella, KN4LF
>Lakeland, FL, USA
>Grid Square EL97AW
>kn4lf@...

I know I am trying to learn more about factors affecting
propagation, and this sounds like it might help.

73,
Ken

Hi Ken, Since you worked with Jay i assume you know about HCARS..

www.hcars.org

Ken Bandy <kc9glq@...> wrote:
Hello all, I just heard about this group a few days ago, and decided to join up. I am located on the far west side of Indianapolis, northwest of the airport. I have been a ham only since August of 2004. My son (who was 12 at the time) and I were both licensed the same day! I had been interested in electronics and radio since I was his age, but just never did anything about it until a ham friend of mine got him interested in it. Since then, I have been making up for lost time. I upgraded to General class in April of 2005, and then up to Extra this April. By the way, I did both of my upgrades with the help of the classes given at the Hendricks County Senior Center, coordinated by Jay, KK9L.

I enjoy "chasing DX" on SSB and digital modes. Done a lot of PSK31, now experimenting with Olivia and Feld-Hell modes.

My shack is a fairly modest one, my primary HF rig is a Yaesu FT-897D, running into a Windom antenna hanging at 35 to 45 feet.

I am currently a member of the Indy Radio Club, and the IDHS Ham Team. If there are other hams on the west side of Indy, or in Hendricks county, let me know, and maybe we can get together for coffee.

73,
Ken

Technical Excellence Nomination announcement

Last call for Technical Excellence Award nominations.

Time for all Indiana amateur radio clubs and organizations to consider one of their own as a nominee for the 2006 IRCC Technical Excellence Award.

For the past five years the Indiana Radio Club Council has selected one Hoosier Amateur Radio Operator to receive this prestigious award during the July 8th Indianapolis Hamfest at Camp Sertoma.

To qualify send a detailed explanation of how this person uses their technical abilities to help their club, community or other amateur radio operators. This award is for the unsung heros that continue to give of their time, talents and technical expertise to make a difference in amateur radio. Please be as detailed as possible when writing the candidates qualifications.

Entries will be judged on technical ability, hours of contribution, individual or organization served and extent of contribution (s). Include an e-mail address for both the honoree and submitting author so we may notify all individuals.

Deadline for entries is Midnight Friday June 9, 2006.

E-mail your entry to: w8ish@... or jparker@...

The Technical Excellence Award will be presented July 8th at the Indianapolis Hamfest.

Our committee looks forward to hearing from you.

Jack Parker W8ISH

IRCC Vice-Chairman

204. Radio Operators Needed for the HOOSIER 200 Relay

Yahoo group: IndyHamRadio
Date: 2006-06-01 02:39:10 UTC
From: Chris Lantaff
Topic: 204 Message: 204

Radio Operators Needed for the HOOSIER 200 Relay July 15 & 16
This event is a great opportunity to practice critical emergency service skills and showcase amateur radio.

ARES, RACES and Ham Radio clubs from Evansville to Bloomington are coordinating efforts for Net control using linked VHF and UHF repeater systems covering the entire route of the race. The race covers Vanderburgh, Warrick, Dubois, Orange, Lawrence and Monroe County with NCS starting in Evansville and later rotating to Springs Valley and finally Lake Monroe in Bloomington as the race progresses.

We have a dire need for operators along the entire route and critically in Dubois and Orange counties.

If your Club or Group would like to assist with a section or individual operators wanting to assist at one of the 36 exchange points contact:

Brian Esche WB9QVR, Warrick Co RACES Officer wb9qvr @ arrl . net
Carl Zager KB9RVB, Monroe County EMA RO and ARES EC kb9rvb @ arrl . net

For Hoosier 200 race info, route maps etc. www.hoosier200.com

Dear Friend of the Tri-State Amateur Radio Society:

Attached is the complimentary June 2006 issue of Sparks.

The .pdf file can be read with Adobe Acrobat Reader. For a FREE download, see: http://www.adobe.com/products/acrobat/readstep.html.

Our next meeting will be at the usual time and place (Thursday June 8th at the Red Cross at 7 PM.) Adam Groupe - KB9SXK, from the Evansville-Vanderburgh County EMA is scheduled to give a presentation on terrorism.

Don't forget Field Day - June 24th & 25th.

I hope to see you at both these events!!

209. Indiana Army MARS

Yahoo group: IndyHamRadio
Date: 2006-06-07 16:42:59 UTC
From: n9nwo
Topic: 209 Message: 209

If there are those among you who might want to be a bit more "hardcore", please think about joining Army MARS. We are looking for those radio operators who are willing to be a part of a highly disciplined net structure, who are willing to learn new technologies like ALE, PACTOR (WINLINK2000) and have a willingness to serve. We are especially looking for Hams who are serving members of the National Guard or military reserves.

Please contract the Indiana State MARS Director (Army), Troy Harrison (AAA5IN, kc9e@...), if you are interested.

N9NWO/AAV5ZO

210. "Sparks" June Newsletter

Date: 2006-06-08 18:45:31 UTC
From: Don West
Topic: 210 Message: 210

Indiana Hams,

A copy of the Sparks Newsletter, a nicely written newsletter, from the Tri-State Amateur Radio Society (Evansville) has been posted in the "Files" section of this news group in ".pdf" format (use Adobe Acrobate Reader availible free at:
http://www.adobe.com/products/acrobat/readstep2.html
<http://www.adobe.com/products/acrobat/readstep2.html>)

If your club or group has a newsletter, please share it with the group. You can do this by uploading it to the "Files" section of this group and sending an announcement or you can send it to me, and I will be happy to post it for you.

73,

Don, W9DEW

215. Virus Alert ("New Graphics Site")

Yahoo group: IndyHamRadio
Date: 2006-06-13 15:22:09 UTC
From: n9nwo
Topic: 215 Message: 215

We have a a number of messages sent to a MARS group (MARS Digital)
that contains a virus/worm. Please read the following message

From the Alpha Phi Omega group

I'm going to confirm Teresa's post. There is a new worm which targets
Yahoo! e-mail users.

http://news.zdnet.com/2100-1009_22-6082934.html

In the future, please include confirming details with any warnings
(links to valid AV sites or informational sites, like ZDNet or CNET)
so we can verify the details more quickly and be sure it's not a hoax.
This one was real, true.

Fuzzy

218. Logging software

Yahoo group: IndyHamRadio
Date: 2006-06-20 01:33:32 UTC
From: Ben Cotton
Topic: 218 Message: 218

Greetings everyone!

I sat down recently to write a simple logging program for the Purdue Amateur Radio Club. When I was done, I thought it might be nice to share it with the world. Thus, I give you yblog ("y-b-log"). The software is dirt simple, almost obscenely so. It doesn't have any bells and whistles, but maybe that's what makes it okay. Its written in PERL and only available in source code, but if for some reason you want a binary file, it might be arranged. Right now, I've only got a Unix version, but a Windows counterpart is in the works.

I'd appreciate any feedback you'd have to offer. The software, and some poorly written documentation are located at http://www.funnelfiasco.com/sales/yblog/

73,
Ben

219. Check out Hoosier Hams

Yahoo group: IndyHamRadio
Date: 2006-06-20 18:37:40 UTC
From: Don West
Topic: 219 Message: 219

Hey Hoosier Hams!

Here are a couple of sites that you may find interesting.

IndyHamRadio has a sister site on Frappr,
www.frappr.com/indyhamradio . Frappr (yes, there is no e in it.) is
a sight where you can post your location and a little information
about your self. You may find it interesting to see where some of
the rest of the IndyHamRadio members are located. Please post your
information there, if you feel comfortable doing so.

Also, there is a callsign server operated by the University of
Arkansas at Little Rock Amateur Radio Club. The link is:
http://callsign.ualr.edu/index.shtml .
It is a little different than most callsign servers in that you
can look up hams by several ways other than their callsign, such as
last name, city, partial callsign and zip code. Whenever I have
moved, I have found it amazing how many hams there are in my zip
code that I have never met. Find the ham closest to you and go
say "Hello Ham!" :)

I hope you find this information useful. Have a great Feild
Day this weekend!

73,
Don, W9DEW
IndyHamRadio Moderator

220. Field Day Sites

Yahoo group: IndyHamRadio
Date: 2006-06-21 15:11:40 UTC

From: Robert LaGrange
Topic: 220 Message: 221

Hi Greg,

Johnson County

The Mid-State Amateur Radio Club
will have Field Day at the Greenwood Health and Safety
Fair at Craig Park in Greenwood this Saturday starting
at noon. They will be using the Johnson County
Emergency Communication Van. There will be fire works
at the park that evening along with various booths and
different things to eat etc.

Talk-in will be on the WA9RDF 146.835/146.235 MHz
repeater (pl 151.4).

Come on down and visit and/or operate.

73,

Bob LaGrange N9SIU

Subject: Please get this out to as many hams as possible for this July 18th event

Please forward this email to as many area hams as you can.

Bi-Plane spotters are needed to track this memorial flight.

Especially important is the take-off time in Ft. Wayne.

Note phone number at the end of this email if ham radio frequencies aren't an option for contacting Bloomington.

How would you like to be a part of the "ground tracking crew" for an Air Parade?

On Tuesday, July 18th, around 20 vintage bi-planes will be leaving Ft. Wayne's Smith Field (north side of town) and flying to Bloomington.

Russ, N9DHX and others, are putting together a "ground crew" that can track them along their journey.

Since they don't fly at MACH speed, they will easy to track. These planes will fly at about 800 - 1,000 feet AGL at somewhere between 75 and 100 knots.

Anyway, I am assisting him on this endeavor. Attached is a map of the flight path. Basically, leaving Ft. Wayne at 9am (approx) and heading west on US30 to SR9. Turning south, they will follow SR9 all the way to Shelbyville, then turn west and pick up SR44. They will follow SR44 to Martinsville and turn south following SR37 to Bloomington. We need reports of when the planes leave Ft. Wayne, as it could happen as early as 8am . seeing how weather is a huge factor in this event. Then, we need reports of sightings along the entire route reported on the repeater system outlined below.

I figure the half-way point to be about Alexandria.

Russ needs any spotting information given to him on the W9WIN Linked Repeater System. For us "northerners", that means using the 444.325 (136.5PL) repeater in Indianapolis. If you are further north of Indy and cannot hit this repeater, use the 146.700 machine and ask someone for a relay. I will spread the word for any listening locals to pick up this

traffic and pass it on.

All this is weather permitting ... since these are vintage (old) planes ... some as old as 1920 and others around 1940's.

This should be a spectacular sight. The pilots will be observing the ground looking for patches of people waving at them. Should you want to get a gathering together along the flight path, get them to "dip their wings" at you by waving and doing whatever it takes and radio it in on the 444.325 (136.5PL) repeater.

This tracking will be used as an 'early warning system' for Russ and those awaiting at the Bloomington Kister Field (now Monroe County) airport.

You can learn more about all of this by going to www.americanbarnstormerstour.com and clicking on the Indiana Air Parade icon.

For more information from Russ, N9DHX, contact him at theryles@... or by calling him at

Russ Ryle 812-876-6808

Thanks for helping as this "Parade" come flying by!

239. Outstanding Amateur

Yahoo group: IndyHamRadio
Date: 2006-07-26 21:16:17 UTC
From: Jack Parker
Topic: 239 Message: 239

IRCC OUTSTANDING AMATEUR OF THE YEAR 2006

The Indiana Radio Club Council is now taking applications for the 2006 Outstanding Amateur of the Year award.

Each year one Hoosier Amateur Radio operator is selected to receive the award for outstanding service and dedication to Amateur Radio. The award will be presented during the Ft. Wayne Hamfest in November.

Nominees will be judged on:

Years in Amateur Radio, years in a service role, active in public service and active as a mentor to new hams. Also considered is participation as a ham radio instructor, volunteer examiner and whether this person actively recruits new hams, especially young people.

This is a basic criteria and your application should not be limited to just these areas. The more information the better.

Please include your nominees email address or telephone number.

Nominations are due by midnight September 23, 2006.

E-mail your nomination to: w8ish@...

Jack Parker, W8ISH

IRCC Vice Chairman

From: Brian Murrey
Topic: 240 Message: 240

Fellow QRPers,

I have been asked to help with a QRP Forum at the Hoosier Hills Hamfest (49th Year) on Sunday October 8th, at the Lawrence County Fairgrounds in Bedford Indiana (the home of Bedford limestone).

We're doing a QRP/Homebrew Show and Tell session that will last about an hour, here is your chance to bring your kits, projects, ugly stuff, etc out in the light of public. You will entertain and astound your peers.

Please let me know if you plan on attending, and if you can bring a project to show and tell.

Hello to Don and all the rest,

I am new to the group today, the name is Jim, KD9KY. I have been in the Indy area for about 30 years, now living on the North side near 106th and Ditch.

No tower at this house yet so my activities right now are pretty much limited to 2m/70cm. I usually listen to 442.65 when mobile.

Jim,

Welcome!

You don't need a tower. I have an attic dipole cut to a 1/2 wave on 40m, I have earned WAS three times since 1999 with this setup and my QRP rigs.

It's great to have you in the group Jim, maybe we can meet at the Bedford Hamfest or something. I live just south of Greenwood.

248. Operating Event

Yahoo group: IndyHamRadio
Date: 2006-08-05 02:52:00 UTC
From: Brian Murrey
Topic: 248 Message: 248

I would like to plan a overnighter ham radio operating event for October sometime.

Here's what I am thinking....

Maybe camping at Johnson County Park on a Friday night in October, after the Bedford hamfest of course. Get a bunch of ops together to put up a few makeshift antennas, and play radio.

Johnson County Park is near Camp Atterbury and Edinburgh Indiana. Grocery store is close by. Campground has modern facilities and can accomodate RV's, campers, and tents. Sites have water and electric.

http://www.johnsoncountypark.com/johnsonpark.htm

Who's up for it?

73 de KB9BVN

Jerry,
I found this review from W4VD on eHam.net.

"I found one of these oldies about 3 years ago on eBay for around 100-125 bucks, I forget the exact price, but after opening it up and giving it a cleaning and a greasing, it's been turning my A4S very effortlessly and regularly ever since. I don't have the specs on this rotor, but I think it's around the CD45 range, maybe a tad more. I plan on adding a 3 or 5 element 6 meter yagi in the future, and I am positive it will be up to the task.

Well built unit, with the price of rotors, should you see a deal on one, jump on it."

Would you say this is a fair assessment of your rotor?

Thanks,
Don, W9DEW

Hi Jerry,
I failed to mention that W4VD rated the rotor 5 of 5. Can you
tell me more about the beam?

Thanks again,
Don, W9DEW

Hi Brian,

Sounds like fun to me! Heck, I might even get Sheila to go, hi,
hi, hi, hi. I need to air out my tent anyway. If someone needs a tent,
I have a spare I can bring.

73,

Don, W9DEW

And Sheila, N9TTT (Not very likely!!) [:D]

Don,

Excellent....so far we have W9ILF, W9DEW, and KB9BVN

Camping is $8 a night for tents and $15 a night for Campers.

I can only do one night, so do you guys want a Friday or a Saturday night?

Hi Don, yes the rotator needs a good cleaning as the direction indicator is erratic. Inside as I recall is a big slider resistor. It works othewise great....

HI Don, the beam is a 3 element tribander, very ruggedly built. Its been up in the air here about 25 years and still works great Jerry. I believe the boom is about 18 feet.
Jerry...

258. Hello all

Yahoo group: IndyHamRadio
Date: 2006-08-06 13:15:18 UTC
From: Tom Erwin
Topic: 258 Message: 258

Hello All,

I was thinking it was about time for me to introduce myself to the group. My call is WD9GON and my wife and I have found our selves back in the Indy area again after a few years. My interests in ham radio has been running around the QRP world with alittle PSK on 20 meters. I am still in the recovering mode of our move as I am still putting up antennas. When I lived near Lexington,Ky. Bob Cooper AF4OI and I started the KYQRP group and had a ball with it for a number of years.

We went to the Broad Ripple hamfest yesterday and had a great time. Sold a few items and seemed to have acquired a few new ones. I also had the pleasure of meeting a person who I have not seen in years. I would be interested in operating QRP in the field at some time and meeting others in the area who would like to do the same. When I get the time I will also have my webpage up and running again. (WWW.WD9GON.COM) Really nothing on it as of now but I will be rebuilding it hopefully before too long.

73's

Tom

Tom,

Several of us are planning a overnight outing.

Friday October 13th, Johnson County Park, just south of Franklin Indiana.

The plan is to bring some gear, put up some antennas, and operate the evening/late evening/morning away...if we want to. This is not a QRP exclusive outing, nor is it a CW exclusive outing. I will be running QRP CW but that doesn't mean everyone else has to.

Even if you come with a hamstick on the trunk of your car and you play radio from your lawn chair and the trunk mount, it'll be a load of fun. I am bringing my fishing pole vertical (10m-40m) and my KX1. If we have electricity at the campsite I will also bring my power supplly and run like that...otherwise I'll use a protable battery I have.

If any of you is thinking about coming, please let me know.

Bedford Hamfest is Sunday October 8th, W9ILF will be there on Saturday afternoon and will camp at the site that night. There will be a QRP Forum on Sunday during the hamfest.

If you're planning on coming to Johnson County Park on Oct 13th, let me know.

QRP Gang,

Sounds like Fun. Count me in. The only thing that might keep me away is that my wife and I are planning a vacation in October and the final dates are not set yet. May be a problem, may not be a problem. I will make every effort to attend. I guess I need to find my qrp antennas and equipment after our move and get them ready. Any camp fire cooking going to happen?

Tom,

Since this is a Friday night kind of thing, I would hope so. Even if we just build a campfire and cook hot dogs.

So far we have:

Me KB9BVN
Ivin W9ILF
Don W9DEW - maybe
Tom WD9GON - maybe

My son Andy N9AWM will probably comes as well and he may bring my grandson too...not sure yet.

Bring a tent, a chair, some food, some drink and some radio stuff....I don't need much of a reason to go camping. It tends to get a bit cool on Mid October nights...be prepared.

Somewhere around here I have pictures of my scout troop camping on October 9th...with 7 inches of snow on the ground....hardlyever happens...but this IS Indiana.

266. Tailgate Hamfest north of Anderson this Saturday

Yahoo group: IndyHamRadio
Date: 2006-08-10 14:32:17 UTC
From: Mike Brown
Topic: 266 Message: 266

The Madison County ARC and the Chief Anderson Radio Club is having it's annual tailgate, no cost hamfest/flea market. It will be held this Saturday, the 12th, and the location is at Lectro Communications parking lot on St. Rd 9, just a few miles north of Anderson. I think most folks are going to arrive around 7am from what I've heard, but I may not make it until 8am. It is a very easy place to find, as there are 2 towers, probably in the 500ft range on the property, which sets on the west side of State Rd. 9. No commercial vendors will be there, but like all hamfest, it's great to get out and see your friends you might not see otherwise.

Talk-in will be on 145.39 and probably 444.675 also. Sorry for the short notice. If you have any questions, contact Mike, K9MI at (765) 622-7782 Email: k9mi@...

Thank you.

The young experimenter in the photo is my grandson. My daughter was up from Texas 3-4 weeks ago for a visit. Jimmy is very "radio active". We built a crystal radio to prove to him that all radios don't need a battery. I also took him to a hamfest on the East side of Indy. He had a ball. We will see where this goes in time. Who knows, might just be talking to him on CW in a few years from now.

The HB keys are ones that I built when I was on a kick to have a 100% homebrew station to make a few contacts with. They use a "Tick-1" chip and really have held up over time. Easy to build and fun to tell other CW operators that the key is homebrewed also. Not too many paper clip keys around that I know of.

I am going to make a manual key out of circuit board material soon to go along with a one watt cw 30meter xcvr I build some time ago. (Before the move) If anyone would like alittle more detailed view of them let me know and I will try to take some better pictures. They are really easy to make and the tick chips are cheap.

269. QRP 1 watter

Yahoo group: IndyHamRadio
Date: 2006-08-13 16:46:44 UTC
From: Tom Erwin
Topic: 269 Message: 269

I posted a picture of a 1 watt 30 meter rig that I plan on taking to the camp and oprate this Fall if I get the time to go. I picked it up at a hamfest a few years ago (Vectronics)and wanted to make a few contacts with it. I also put a back up key on the board just in case keyer battery failed.
Now on to the battery supply and antenna for for it.

Tom it should work great!

I am bringing my Small Wonder lab SW+40 and 20 I built
this year. I will also be about 1 - 1.5 watts. I'll
have a doublet antenna using a fishing pole mast and a
12V 5amp battery for power. I recently caught the
seat of my car on fire working qrp/hamstick. It is a
good story I'll save for the campfire.

Guys

I am stoked about the camp out.

I will be bringing my SW20+ and my KX1.

I have a couple fishing poles too so we can make impromptu antennas

Sometimes those are the most fun.

Any ham that wants to attend is welcome, this is NOT a QRP or CW only outing.

In a couple of weeks we can start talking about FOOD!

From: Tom Erwin
Topic: 272 Message: 272

I have been looking around and found my fishing pole that I never got around to making into an antenna. I'm thinking about some type of 40-30 meter inverted vee or I guess I could finish the vertical antenna it was suppose to be. What types of antennas are you guys going to set up?

Hi Mike,
You would have to call them to be sure, but..... I believe that there is testing at the Red Cross every month, but the testing group alternates between the ARRL VEC and the Western Carolinas ARS VEC. Rick Reneau, RRENEAU@..., can give you the definitive answer, but I think if you look at the calendar, that is what you will see. Hope that helps.

288. HAMS Needed for Greenwood Event

Yahoo group: IndyHamRadio
Date: 2006-08-23 15:54:22 UTC
From: Robert LaGrange
Topic: 288 Message: 288

The Greenwood HS Marching Band Invitational is coming
up and I need about 15 more HAMS to help with parking
and public safety. It will be held Saturday September
23rd at Greenwood HS. We need HAMS there from 2:00
PM to about 11:00 PM. The largest volume of people
come from 5:00 PM to 8:00 PM, there can never be too
many HAMS that can help with this event. Food and
drinks will be furnished for those helping. Please
contact Bob N9SIU at n9siu@... for more details.
Your help will be greatly appreciated by all that
attend this event. Any time you can help with this
event is greatly appreciated.
Last year we had over 5,800 over the day including the
bands.

Many thanks and 73,

Bob N9SIU

Reminder from the Calendar of IndyHamRadio
http://groups.yahoo.com/group/IndyHamRadio/cal

VE Testing - Kokomo
Sunday August 27, 2006
1:00 pm - 2:00 pm
(This event repeats on the last Sunday of every other month.)
Location: Emergency Management Office
Street: 120 E. Mulberry Street
City State Zip: Kokomo, IN

Notes:
Amateur Radio testing is held on the fourth (4th) SUNDAY of every EVEN numbered month. Holidays and other events may alter this, check the web site for the latest information. The test sessions will begin at 1:00 pm. No applicants will be accepted after 2:00 PM local time. The cost of the exams is $15.00. Updates to the schedule can be found at:
http://www.kokomohams.org/

For more information, contact Mike Gardner N9MG, e-mail at n9mg@....

Topic: 292 Message: 292

The 20-Meter J-Pole

Recently, I decided that I was getting bored with my sloping longwire antenna. It worked fine, to be sure, but there were some serious holes in the coverage outside of the major lobes. I decided that I wanted to put up a vertical antenna, but the thought of burying a ton of radials in my backyard left me cold. A vertical dipole seemed to be called for, but I didn't have enough supports to run the coax perpendicular to the dipole for any appreciable length.

After some thought, I hit upon the idea of making a 20 Meter J-Pole. I've been a fan of J-Poles for years, having built them out of copper pipe for use on 2 Meters. Obviously, I wasn't going to be able to use copper pipe on 20. I settled on a design that used insulated 12 gauge stranded wire. After modeling it several different ways on EZNEC, I was prepared to mount the antenna with the matching section runs parallel to the ground a few feet up, whit the radiating 1/2 wave section vertical. That allows for a lower support, and only lowers the gain slightly. It also 'de-circularizes' the pattern, but only by about 1 dB.

I modeled the antenna with a 1-foot gap for the matching section. When I went to build it, I found that the scrap Lexan I planned on using as spacers wasn't long enough, so I re-modeled it with a 6-inch gap. The change had little effect according to EZNEC. I made the spacers by cutting the lexan into 7 inch by 3 1/2 inch rectangles, then drilling four holes, one near each of the corners. I made 5 spacers this way. I had planned on making 6, but one of them broke a corner while I was drilling it.

I took my measuring tape and staked a 16.5-foot distance on the ground. I wrapped the wire around it four times, then cut it about a foot past the stake to allow for the 6 inch gap and to allow for some extra at the top of the antenna for the insulator. I then staked the antenna down in the final shape. I cut and stripped the wire at the bottom, then started sliding the spacers up the matching section. The wire is stiff enough that they don't move once locked in place (the wire is threaded up through one hole, then down through the other on both sides of the spacer). If I ever need to use open wire line for a different antenna project, this is how I am going to make it. I put a small knot in the wire at the top of the matching section to keep it from sliding out of the spacer.

Feeding the antenna is dirt simple: An SO-236 chassis connector soldered on the bottom, with the center conductor going to the longer wire and the ground going to the matching section. I was concerned that I might need to have some kind of elevated feed, like I have done in the past with copper J-Poles on 2 Meters, but modeling suggested that it wasn't necessary. That was borne out in practice. I now think that the elevated feed seen in "Plumber's Delight"

J-Poles is just a more convenient way to feed them, given their construction.

I first tried to get the antenna up into the tree I was going to use for support using a wrench tied to a rope, swinging it around my head. After several tries, all of them either failing to get enough height or missing the tree entirely, I gave up and gave my friend Jack KE7NL a call. He brought his slingshot/fishing reel antenna raisin' contraption, and a good deal more experience, with him. After a few tries, we were able to get the antenna high enough so that all but the very top of the antenna is vertical. Since the length of the antenna is about 50 feet, that is no small accomplishment. The bottom of the antenna is about 1 foot off the ground. I am indebted to Jack for his assistance and advice.

The antenna seems to work quite well on 20 Meters. The VSWR is between 1.5 to 2 for the entire 20-Meter band, and I have received good reports in the few short days it has been up. Contacts have been made from my Upstate NY QTH to FL, SC, WI, and OH on 20 Meters. Using a tuner, it will load up on 80, 40, 15, and 10 Meters. I have made a couple of contacts on 40 Meters with it, however I could tell that the antenna wasn't performing well. Since the 1/2 Wave section on 20 meters is 1/4 wavelength on 40 Meters, I am thinking about burying some 40 Meter radials underneath the antenna and possibly using a clip lead to connect them to the matching section of the antenna while I am on 40 Meters to see if that will help. On 15 and 10 Meters, modeling suggests that most of the radiation will go up, instead of towards the horizon. In any case, this is a much better 20 Meter vertical than you can buy, and since I already had all of the materials at home, it cost me all of zero dollars to put up.

One of the most interesting new ideas in antennas comes from EH Antennas

http://www.eh-antenna.com/

It seems that Ted Hart W5QJR has taken the math concepts of Russian math wiz and come up with some interesting ideas and resoults.

The resulting antennas are tiny by measure to any standard hertz antennas to date and if they work even half as well as they are claimed to work, it might change what many of us use today.

Talking with Ivin, we are going to try building a few ourselves but with my basic understanding of things, it may be a bit more slow going than othes.

If the idea seems interesting, check out the link, and the info including the ham radio section, perhaps we can make this a group project involving more of us .

I am not saying this to be mean, but there are a lot of hams that have little understanding of antenna theory that will be fooled by a lot of hocus pocus written in a scientific way. In my humble opinion, EH antennas are Snake Oil. Don't waste your time or money. There is no magic when it comes to antennas.

This has been floating around for several years now.

Jim,

Good luck and you guys have fun with that design. I'd be interested in how it works out.

I had been doing some reading on the antenna myself.

http://www.eham.net/articles/5002

and

http://www.eham.net/articles/3586

and

http://patft.uspto.gov/netahtml/srchnum.htm

The design is interesting, and they did go to the trouble and expense of getting a US patent on the thing. I have never built one, although I have been very curious. If you dig around on QRZ and eHam you'll find about 50% of the guys say it works, and 50% of the guys say it's total malarky.

So if I were you, I'd build a couple of them for different bands and try to have a QSO with it. Will it radiate as effectively as a a set of stacked beams up 120 feet? My hypothesis would be "no it won't" but I am basing that on nothing more than sheer size. Can't really tell until it is tried.

Share the hard data with me? Then I don't have to guess anymore. Heck, bring one to camp on the 13 of October!

E-H Antennas appear to have a lot of happyu customers, most of them living in convenant restricted housing developments.

73 de KB9BVN

Most experiments are failures...but every now and then something really exciting happens.

One other thing....

Antenna measurements done strictly by the book, as in electronic analysis involving large quantities of math and charts and graphs are all fine and dandy...but I prefer my methods.

1. Is the thing in the air?
2. Can I connect it to my transmitter?
3. Can I get an impedence match (with or without tuning network)
4. Did I have a QSO?

The most important step to me is #4. If #4 is positive, then I declare the experiment a success and we name the thing "The Antenna".

But then again, I'm a guy using a attic dipole and less than 5w....I have WAS in 1999, and 2002 and I have 51 DXCC entitites in the logbook. Yes, it's an antenna.

My most fun lately with an antenna that "won't work" was working Argentina on 20m....from my car...with a Anttron Hamwhip antenna and my Elecraft KX1 at about 2w on my home from Terre Haute...while my wife drove. Some say it was luck...I say it was skill!! That guy in Argentina KNEW what he was doing. HI HI HI

A friend of mine built one for 20 meters and was less than impressed by its performance. But then again, another friend who is into ULF built one for the 7 Hz (that isn't a typo) range and was very impressed. His construction was rather large but far smaller than a dipole at that frequency. He's detecting Schumann resonances with it.

So I don't know what to say. I want to build one for 160 meters and at least give it a try this winter and form my own conclusions.

Hey guys,

I read with much interest the comments of Walts, and he is not the first one I have heard say that this is a snake oil deal, also that there is no magic to antennas, however I do realize that it was through pure math that we discovered planets that no one knew of untill the math told us to look for.

I suspect that like a jpole antenna, the trick is to be spot on with the measurments when making the antenna. I have made many Jpole antennas and I know a slight miss calculation on the placment of the feed points can render one a major hitter or a dud, perhaps it is the same with the EH stuff. I do know the FCC looked at the AM broadcast version and did not think it snake oil....

Also is it a good antenna ? well perhaps next to a KT 34A on a 75 foot tower it may stink, however for the tons of hams who are not able to have an antenna farm this may be a boost. I know that using my indoor slinkys was about the worst antenna I could think of and yet it did get me WAS after a time.

I believe the cost of making one should be under about 20 bucks and so Walt I think I will waste the cash just to see if it can get out at all. If it does, it shoud be a nice addition to any field trips we take, the 20 meter would fit into a pack and is less than 1/2 pound, with no radials, it seems worth the risk

Now, what if Ivin and I goof up and get all the numbers right and it does work, that would be worth the effort, not just for us but also for a few hams I know who are not allowed to have any antennas at all.

We are hams, expermenting and blowing stuff up is part of the hobby, if I did not care to take chances with this stuff, I think I could trade all this trash in for an 11 meter rig and just learn to say good buddy and never think again.

The thing looks easy enough and cheap enough to build...if you don't plan on using sheet copper...copper has SKYROCKETED in cost. I wonder if sheet aluminum would work? Might be harder to solder too though.

Sound like a good way to spend the afternoon. I think a couple of the guys are getting together this weekend to experiment with the design, I look forward to seeing the results of such experimentation.

Jim,

We're on the same frequency here. As I have told Ivin time and time again...my motto is "Learn by Burn" - some amazing amounts of knowledge can be transferred in the course of a meltdown.

I have a cartoon, my favorite cartoon...there is a bench tech sitting at the bench with a device all opened up in front of him...his head is smoking and his face is all smudged....he's holding a screwdriver over the device he s working on...the caption reads.."Hmmmm, it's never done THAT before"

Cracks me up.

BE safe in your ham radio adventures, and never pee on a electric fence.

AFAIK you can use any conductive metal for the cylinders. The one I mentioned for detecting Schumann resonances at 7 Hz was made with two 40-gallon galvanized metal trash cans.

I think one of my favorites is a cartoon by PA0CX that graced the cover of Ham Radio magazine once. It shows a guy with a little tiny radio opened up on a table and the schematic which appears to be about 4 X 4 feet in size. It dwarfs the radio. He's standing there with a sad look on his face ...

Hi Brian,

Well, simply put, the space between the earth and the ionosphere creates a giant waveguide. It has resonant frequencies, like a giant resonant cavity. Large electromagnetic disturbances such as lightning create signals in this cavity. It has several resonant frequencies; some are around 7.8, 14, 20, 26 Hz.

There's some info here:

http://en.wikipedia.org/wiki/Schumann_resonance

If you do a Google search, you'll come up with a lot more.

Ok...I got that.

So what does knowing when we have Schumann resonances tell us?

Is it a storm predictor?

There are always signals present on the Schumann frequencies. They seem to vary in signal strength based on various events. One of those is geomagnetic storm activity. Another is earthquake activity:

http://www.copernicus.org/EGU/annales/24/567.htm

On one discussion group I am a member of, some people monitor these frequencies constantly. They have indications that the changes in Schumann signals can be both precursors and aftermath indicators of an earthquake.

Sometimes people observe anomalies in the signals that are unexplainable.

308. Indy Ham Radio Group Update

Yahoo group: IndyHamRadio
Date: 2006-08-29 20:52:36 UTC
From: Don West
Topic: 308 Message: 308

Hello Indy Ham Radio Members!

Just a quick update on the status of the group. Since the group started, October 26th last year, we have grown to ninety-six members. During that time:

* I have had only two spammers try to join the group. (Yippee!)

* We have only lost two members, both due to moving.

* We have not experienced even one episode of flaming, rudeness or discourtesy by any member. (Thank you ALL very much for that!)

* Barring some unforeseen catastrophe, the group should easily pass the 100-member mark before its first anniversary.

* Despite claims to the contrary, you have shown that there is much to do in Ham Radio in Indiana. Nevertheless, several members have said, "they thought, they were the only ham in Indiana!"

With every new member, the group gains another source of information of interest to Hoosier Hams, and an opportunity to connect with other Hams.

If you have not found the group useful during your membership, please let me know what we can do to make it better and more meaningful to your Ham radio experience.

If, on the other hand, you have found the group useful, please use the "invite" option on the left of the main page to invite a ham that is in a position to pass along information or (better yet) a ham that may be having trouble finding other hams to answer questions, help with antennas, go to hamfests or just "shoot the breeze" with.

Thanks for a great first 10 months & 73,

Don, W9DEW

IndyHamRadio Moderator

Jim:
Let me know how it works out. If you want to take the time to experiment with it, you may gain some data that will be useful to us all. I just did not want to see Amateurs investing time and money thinking that this theory was established fact. In your case, you know that it's credibility is controversial and you are aware that your investment is a fact finding mission. So you are approaching it for the right reasons.

Hey guys,

I read with much interest the comments of Walts, and he is not the first one I have heard say that this is a snake oil deal, also that there is no magic to antennas, however I do realize that it was through pure math that we discovered planets that no one knew of untill the math told us to look for.

I suspect that like a jpole antenna, the trick is to be spot on with the measurments when making the antenna. I have made many Jpole antennas and I know a slight miss calculation on the placment of the feed points can render one a major hitter or a dud, perhaps it is the same with the EH stuff. I do know the FCC looked at the AM broadcast version and did not think it snake oil....

Also is it a good antenna ? well perhaps next to a KT 34A on a 75 foot tower it may stink, however for the tons of hams who are not able to have an antenna farm this may be a boost. I know that using my indoor slinkys was about the worst antenna I could think of and yet it did get me WAS after a time.

I believe the cost of making one should be under about 20 bucks and so Walt I think I will waste the cash just to see if it can get out at all. If it does, it shoud be a nice addition to any field trips we take, the 20 meter would fit into a pack and is less than 1/2 pound, with no radials, it seems worth the risk

Now, what if Ivin and I goof up and get all the numbers right and it does work, that would be worth the effort, not just for us but also for a few hams I know who are not allowed to have any antennas at all.

We are hams, expermenting and blowing stuff up is part of the hobby,
if I did not care to take chances with this stuff, I think I could
trade all this trash in for an 11 meter rig and just learn to say good
buddy and never think again.

Yes, that's great! We have a superb group of individuals here.

I actually live in Urbana, IL but it's so close to Indiana that I had to join this group ... not to mention I have many relatives in Indiana and I make excursions over for portable operation from time to time.

Two weeks ago I was Roving along the southern edge of Lake Michigan (Indiana Dunes area) for the first weekend of the 10-GHz-and-Up contest.

I have only one objection. With a name like Indy Hams, many assume that it is only for Indianapolis area hams. Maybe the group should have been named Hoosier Hams! (of course then we would alienate all of us Purdue grads)

Hi Greg,
I agree with your objection. In fact, the group started as being for only Central Indiana, but there seemed to be interest from outside this area (and where is the boundary of Central Indiana anyway?). Bad decision on my part.
I am reluctant to change the name at this point, not knowing what kind of complications might result. I do not know if there is a way to have two name lead to the same group, but I doubt that. Just as an aside, we have at least one member from each from Illinois, Minnesota, Nevada and the United Kingdom, all of which have ties to Indiana. (Who would have guessed that?)
Maybe we will have a "renaming contest" sometime, hi, hi.

73,
Don

FOR ALL CONCERNED:
Sounds great on the Indy Ham Radio Members.
In fact I will try to remember to put a little
ditty in our next club newsletter advising of
this group.

I too am glad to hear there are essentially no
problems to deal with on here.

We all have a varied interest in ham radio for
sure. From just basic observance I do not know
or recognize very many calls in the group.

My primary activity is the Indiana Traffic Net (ITN)
that meets twice daily 0830 AM & 4:30 PM on 3910 khz.
That group consists of nearly 50 hams for most of the
sessions.

I used to be active with the Indiana CW nets too a
few years ago. I am not into DX but have worked some
over the years.

I really liked packet when it was going strong and
miss that activity although my set up still exists
here for VHF.

When we go camping I always try to bring my HF rig
and a wire antenna. And we have camped from southern
Indiana to the Manistee National Forest near Mesick
Michigan. That also includes a few areas of the
Hoosier National Forest too along with various Indiana
parks.

Been reading about some of the upcoming events but we
may not make the scene out in the boonies.

Enjoy ham radio everyone.

With every new member, the group gains another source of information of interest to Hoosier Hams, and an opportunity to connect with other Hams.

If you have not found the group useful during your membership, please let me know what we can do to make it better and more meaningful to your Ham radio experience.

If, on the other hand, you have found the group useful, please use the "invite" option on the left of the main page to invite a ham that is in a position to pass along information or (better yet) a ham that may be having trouble finding other hams to answer questions, help with antennas, go to hamfests or just "shoot the breeze" with.

Thanks for a great first 10 months & 73,

Don, W9DEW

IndyHamRadio Moderator

Don West <Don-West@...> wrote:
Hello Indy Ham Radio Members!
Just a quick update on the status of the group. Since the group started, October 26th last year, we have grown to ninety-six members. During that time:
* I have had only two spammers try to join the group. (Yippee!)
* We have only lost two members, both due to moving.
* We have not experienced even one episode of flaming, rudeness or discourtesy by any member. (Thank you ALL very much for that!)
* Barring some unforeseen catastrophe, the group should easily pass the 100-member mark before its first anniversary.
* Despite claims to the contrary, you have shown that there is much to do in Ham Radio in Indiana. Nevertheless, several members have said, "they thought, they were the only ham in Indiana!"
With every new member, the group gains another source of information of interest to Hoosier Hams, and an opportunity to connect with other Hams.

Good afternoon Don,

Thanks for doing such a fine job with IndyHam Radio
and I think our boundries are limitless. This Yahoo
group is one of the best ways to get information out
to hams in an easy and quick manner.

Keep up the good work!!!

73,

Bob L. N9SIU

However, this is not a trail-blazing exercise.

There has been an Internet mailing list, aka "reflector", for Indiana hams on QTH.net for years. I was one of the moderators for that list in the late 1990's, but turned over the reins do Dan Evans K9ZF when I moved to Kentucky in 2000 (I've since moved back to Indiana). The InHam list doesn't get much activity, but it's there and it's a resource. For more information, see http://mailman.qth.net/mailman/listinfo/inham.

One of my great frustrations with the Internet is the proliferation of gathering spots and forums for information sharing all about the same subject. Back in the dark ages (mid 1980's, MS-DOS running on 80286 processors), you had Compuserve, FIDOnet, Usenet, and a couple of other online forums for ham radio. But, look at today--mailing lists, newsgroups, and online forums abound. It's hard to keep it all straight and even harder to keep up with it all (Ik know, I subscribe to about 40 radio-related Yahoo groups alone).

Knock yourself out, Don. Manage and promote this group as you see fit. But keep in mind that your resource pool is diluted (not polluted <grin>). You'll likely never catch the hearts and minds of every ham in Indiana.

Bob,

I do recall you from some time ago but not sure about my being active with the reflector or others. Not even sure about the major domo that W9FS used to make reference to either.

I can speak for a number of local hams in my opinion in regards to some of the trails and topics from the past. We sometimes lag a bit behind in some of the technology and modes out there. Then about the time we catch on and try to get involved there is already a myriad of other data streams in operation and folks abandon the old it seems.

I have essentially done nothing with irlp or echo link yet let alone PSK. Think my old KAM unit recently gave out too and I was on PACTOR & PACKET plus still enjoying some RTTY. Hopefully my ancient laptop and KPC-3 still work for VHF. With some more hands on coaching we hope to just use a couple cables, software program, and our HF rigs to get back on digital modes again.

For my part being out here in the boonies and still lucky if we can connect more than 20 kbps at times it is a rather slow process on the Internet. I am still just a basic computer user and ham radio operator. Even that keeps me very busy along with the home front.

Anyway we are still having fun with what we can do and enjoy playing radio.

And yes I can agree there are so many links out there it is difficult to keep up with all of them. I try to keep active and in touch with those who were in the Army Security Agency (ASA) years ago. We are now finding each other again and having various reunions from places we served all over the world.

Then there are so many links or web pages that want $$$ to support their efforts. I tend to say if I paid a couple dollars a month to all the web sites in that category my bill would probably be in 4 figures each month! OK maybe a little exaggeration here but it is a point.

Anyway, we enjoy getting on here and thank those who put forth the efforts to do something.

Don / KA9QWC

Lack of exposure, I imagine. Not many people know it exists. At one time, I thought about putting together a flyer about InHam and distributing it to hamfests in the state, but I moved to Kentucky before I followed through with that idea.

Brian, you and I are veterans of the old days. I met you via a FidoNet group for
local hams before I got my license. I learned a lot from that group.

Bob

I thought your name was familiar. I used to be the moderator for the Ham Radio echomail group. I took it over when Jim Grubbs (now a SK) got done with it.

Ahhh...the good old days. I used to be a co-sysop on an BBS called The Byteline in Indianapolis back in 1981. It ran on a TRS80 Model 4 and used the TBBS software. In 1984 I put my own BBS online (The Southside BBS) and I ran PCBoard on a IBM clone...it had a 20MB hard disk...WHOOOOWOOOOOO.

Sometime around 1987 or maybe 1986 Chuck Ober, Al Thompson, myself started the Central Indiana Fido Net and we were Net 231 in Region 1. By then I was running QuickBBS (A TBBS clone of sorts) and Chuck and the Byteline was the original Net Control. When Chuck moved away, I was the new NC and did it for several more years. I think I took my BBS down for the last time in 1996.

Byteline was the second BBS in Indianapolis to have a CD ROM drive and high speed modem. (US Robotics Courier 9600). I think Net 231 had about 40 BBS members at one point. I know we spun off two or three other networks in Indiana.

I used to publish the Fidonet Ham/Packer Digest.

Is Fidonet still alive? When I bailed out, the WWW was kicking in hard and Fidonet nodes were starting to disappear.

Hi Brian,

I got a kick out of your earlier post. I used to use the "Southside BBS" --- man, with all of that high speed technology --- what maybe 300 baud with the Commodore 64, and perhaps a blazing 1200 with my first 286! Yeah, and when I ran the packet BBS (shut down 9 years ago), it had a 40 MEG hard drive for the entire BBS and a second 40 MEG hard drive with the entire SAM callbook on it! Now I'm not sure if you can even get a current operating system on 4 GIGS!!

Sometimes I miss the ole 525 repeater --- and yes, WA8VZY does still live in the area --- although, he isn't active in amateur radio anymore. He and I cross paths every once in a while.

329. Outstanding Ham of the Year

Yahoo group: IndyHamRadio
Date: 2006-08-31 20:21:06 UTC
From: Brian - KB9BVN
Topic: 329 Message: 329

REMINDER:

IRCC OUTSTANDING AMATEUR OF THE YEAR 2006

The Indiana Radio Club Council is still taking applications for the 2006 Outstanding Amateur of the Year award.

Each year one Hoosier Amateur Radio operator is selected to receive the award for outstanding service and dedication to Amateur Radio. The award will be presented during the Ft. Wayne Hamfest in November.

Nominees will be judged on:

Years in Amateur Radio, years in a service role, active in public service and active as a mentor to new hams.

Also considered is participation as a ham radio instructor, volunteer examiner and whether this person actively recruits new hams, especially young people.

This is a basic criteria and your application should not be limited to just these areas. The more information the better.

Please include your nominees email address or telephone number so they too can be notified of their nomination.

Nominations are due by midnight September 23, 2006.

E-mail your nomination to: w8ish@...

Jack Parker, W8ISH

IRCC Vice Chairman

I haven't been in touch with Al or Linda in several years. They ran a BBS called "The Motherboard" and they were also running QBBS.

All the QuickBBS guys used Binkleyterm for the frontend...that was all DOS based stuff and the binkley.bat file was a scary looking thing...it forced me to learn a lot mor about batch files than I ever wanted to know.

Ok...back to ham radio...hehehe

I am mainly into QRP HF CW stuff these days...been QRP since about 1998. I certainly enjoy building these little rigs and seeing who I can communicate with. I do find that I like building more than operating...but I like both a lot.

I have a 2m rig in the garage for severe weather. It's a FT2600 at 50w to a copper pipe J-Pole...when Johnson County gets bad weather, and I am home, I sometimes act as liason to the big boys in Indy. Pretty exciting stuff sometimes. I'm a scout leader and I have been able to get at least two of the boys to dig in and get licensed....two in twenty years...hahahaha....but hey, its better than nothing.

Well this thread is conjuring up some memories. Several years ago I operated a BBS on the North side called Arc Light. I'm guessing that was early to mid 90s. That was running Wildcat software and I was hooked up with RIME (anybody remember that one?) and Fido.

I remember sparring with Linda frequently via Fido, she was pretty heavily into the militia and black helicopter conspiracy thing.

Eventually Arc Light turned into Internet Indiana.

And the 5.25 system was big when I re-entered ham radio after a many-year hiatus. When I got active again on VHF/UHF a few years ago I was surprised that it was no more.

All,

This is my first post....this thread made me think of the BBS that I used to frequent that was called "THe Grouch." It was based out of the East Side by a retired telephone company employee.....he turned it off about 5 or 6 years ago. It was like the Arc Light in the way that it also used Wildcat software. Ah, the old days.

Alex, AA9XY

jstjohnz <jim@...> wrote:
Well this thread is conjuring up some memories. Several years ago I
operated a BBS on the North side called Arc Light. I'm guessing that
was early to mid 90s. That was running Wildcat software and I was
hooked up with RIME (anybody remember that one?) and Fido.

I remember sparring with Linda frequently via Fido, she was pretty
heavily into the militia and black helicopter conspiracy thing.

Eventually Arc Light turned into Internet Indiana.

And the 5.25 system was big when I re-entered ham radio after a
many-year hiatus. When I got active again on VHF/UHF a few years ago
I was surprised that it was no more.

342. EDITORIAL: FCC needs to tighten license application process

Yahoo group: IndyHamRadio
Date: 2006-09-04 14:28:39 UTC
From: Bob Burns K4RXR
Topic: 341 Message: 342

The following is an editorial published in a recent on-line edition of Mobile Radio Technology. It may be a little off topic, but since it does mention a commercial radio dealer located in Indiana, I thought some of the members of this list might have an interest. Also, I'll warn you, this editorial points out a negative aspect of this dealer and may only tell one side of the story.

The root issue of Mr. Bischoff's editorial is that the FCC may need to start doing background checks on license applicants. If the FCC adopted such a policy, it could trickle down to amateur radio. Something to think about.

Bob...

==========

FCC needs to tighten license application process
By Glenn Bischoff
September 1, 2006

I have a friend who is a teaching assistant in a suburban Chicago junior high school. Before she could assume her duties, she was subjected to a criminal background check and was fingerprinted. She took no umbrage at these requirements and suffered no indignity, because she recognized -- as any right-thinking person would -- that children must be protected at all costs from nefarious souls who would do them grave harm if only given a sliver of opportunity. She also didn't have anything to hide.

Apparently, the same can't be said for an Indiana two-way radio dealer and its former owner, who are the subject of an FCC investigation (see story at http://mrtmag.com/news/fcc_crs_doty_083106/). The FCC alleges that the dealer, Commercial Radio Service (CRS) in Terre Haute, Ind., failed to divulge on at least seven licensing applications that one of its controlling shareholders, Timothy Doty, is a convicted felon. Revealing the convictions could have prevented CRS and Doty from receiving their licenses or having them renewed, as the FCC considers the character of the applicants when reviewing all license applications.

In reading the seven-page Order to Show Cause -- which compels CRS and Doty to explain themselves -- issued by the FCC this week, I was struck by a paragraph on page 4, which indicates that "the FCC relies heavily on the honesty of its applicants in a regulatory system that is largely self-policing."

To be sure, there was a time in America when people went to sleep at night without locking their doors, when they could leave their car keys in the ignition and when they could walk through city parks late at night without fear of attack. Those days are long gone. We now live in an era where job applicants routinely lie on their resumes, high-school academic teams are exposed as cheaters and corporations bilk shareholders of billions of dollars (recall Enron and WorldCom). Sadly, "it's not whether you win or lose -- it's how you play the game," has morphed into "the ends always justify the means." Unfortunately, "self-policing" is a well-intentioned yet archaic concept that has little or no relevance in modern society.

The president of an RF consultancy in Terre Haute that blew the whistle on CRS told me that public-safety agencies in town rely on the system owned and operated by CRS. I don't know about you, but I would no more want the public-safety communications system in my town run by a convicted felon than I would the children in my town taught by one. I also wouldn't want to be running a business that relied on a radio system operated by a convicted felon. Clearly, CRS and Doty must be allowed to answer the FCC's inquiry, and should not be tried in the court of public opinion. But if the allegations are true, CRS should be stripped of its licenses.

However, that's not the point of this column. Rather, given that school districts across the country are able to routinely subject tens of thousands of their employees to criminal background checks, is it not reasonable to think the FCC could -- and should -- do the same for private and commercial land mobile radio license applicants? I believe it is reasonable -- yes it would be expensive, but licensing fees could be raised to cover the costs -- and that the FCC should get to it.

E-mail me at gbischoff@....

<getting my flamesuit on>

I disagree with Bischoff. A federal criminal background check is not needed for amateur radio applicants. First of all the law is not very clear regarding felons being issued FCC amateur licenses, it is somewhat subjective. The CRS licenses are commercial, and I feel those probably do need a background check of all principle owners but not all the employees. Let the employer pick up the expense of backgrounding his employees.

Now, CRS has been providing acceptable service to the Terre Haute area, apparently for a number of years...and now it is not suitable. EMR Consulting probably wants the business....but who knows when the contract expires? EMR goes to the feds and opens complaints.

I agree that Doty needs to have his commercial license revoked and he should be fined for lieing on his renewal applications. I agree that CRS need to suffer some kind of forfeiture as well.

In the meantime the people of Terre Haute and Vigo country are at risk. If the FCC doesn't cancel the operating licenses of CRS then EMR will just have to bid the work when it comes up the next time.

Sounds like sour grapes, a bad service provider, and I'd like to know more about Doty's arrest in 2001 for possession of a controlled substance...what was it?

I also feel the same as Brian about background checks. There is to much government in our lives as it is.

The FCC has never been able to control the CB bands, and when you make it impossible for people to get a ham license do to some minor infraction of the law, you will only be expanding the ranks of CB groups.

The only reason I even bother getting a license is because I can. Should the government ever tell me I cannot , then it will be pirate radio for me....

And I don't think Bischoff is suggesting that. His comments seem to only apply to land mobile licenses. My concern is that if the FCC heads down that path with one service, will they apply the same standards to other services, like amateur radio?

I agree with Bischoff. I think that we need criminal background checks for both Part 90 land mobile radio licenses and amateur licenses. If we had that, we'd see much less lid-like behavior, and Riley Hollingsworth would have a lot less to report on the ARRL web page.

My $.02,

Alex AA9XY

Alex,

Interesting. We'll just have to agree to disagree. Lid removal is one of those things that just never gets perfected. How many lids do you know that are felons? I don't know any lids around here so my number is zero. Such as it may be.

Just out of curiosity, how many FCC letters go to amateurs that are convicted felons anyway? I don't think the number is all the big. Here's a good question....how many lid/felons on 14.313 SSB ? NOW that's a good question. Heheheh.

73 de KB9BVN

Spartan Sprint starts at 9PM EST tonight....grab your QRP and key and join in on the fun.

It looks like I have to disagree with Alex, too. Most of the jerks on the air probably aren't felons. I'd even venture so far as to say that many felons could probably be just as good an operator as anyone on this list. I'm generally a fan of the "if it ain't broke, don't fix it" philosophy. It has been my experience that the Amateur service has been very effective at self-policing, and I imagine the other services are too - otherwise the FCC would have already stepped in. I'm all for letting someone get a license until they prove that they don't deserve it.

Just my guess - all that lid-like behavior is from people who have no criminal backgrounds. The percentage is probably far smaller than anything significant.

Brian:
My apologies. It is now obvious that I failed to grasp the concept and took a wrong turn at Albuquerque. I have a high regard for Riley and thought this was a vicious insult. Now I know what flying pigs are. I apologize for my misunderstanding.

Walt,

What comment? Riley Hollingsworth K4ZDH is Flying Pig #666. He supports QRP operations, and I have worked him several times inthe last few years. He's even come to our Four Days in May event at Dayton a couple of times to be with the Flying Pigs.

http://www.fpqrp.com

Walt...I think maybe you misunderstood my comment. The Flying Pigs QRP Club International are a worldwide group of amateurs interested in homebrewing rigs, antennas, and ham shack items as well as operating QRP. Go to the website and under the heading "Pig Stuff" click on "Bacon Bits"...the BB is our newsletter and they are free. Help yourself to a few copies and see how much fun we have.

I am Flying Pig #57, there are about 1500 of us out there now. You're more than welcome to join us, we have a lot of fun.

I meant no disresepct to Riley Hollingsworth, and I mean no disresepct to you Walt. I hope you can join us at Johnson County Park on October 13th for a night of camping, radio, and fun.

Alex,

Nope. I have been a member of MARC in the past, but I have never been the repeater guy. I manage to make about one meeting a year it seems. They get up too early on a Saturday morning for me. Those guys have a pretty good club down there in Franklin.

I do work as NWS liason for the Johnson County Severe Weather Net sometimes....but not all the time. Usually Luke is the net control for the severe weather nets.

I help Rick Reneau KB9NDF with the WCARS testing at the Red Cross once in a great while, but the only time I am on 2 meters is when I am at home during a storm.

Topic: 341 Message: 359

Brian,

Yes, I agree that MARC gets up too early on Saturday morning for me. I spoke in front of their club about antique radios once about 3 or 4 years ago. Their president (I think he's still the president) Jerry Schantz is a nice guy. I grew up in Whiteland, and took my first amateur radio class and Novice and Tech Plus license exams there in Franklin in 1994. KA9OOH taught my novice class. MARC is a good club, indeed.

I think Rick Reneau and Bill Goodall were running the testing when I got my Extra in 1998 over there at the Red Cross on 10th street. What is WCARS?...I've never heard of that organization....is that the Red Cross club?

I need to get back on the air....I've been off ever since a freak February rainstorm killed my old Kenwood TS-820S.....that'll teach me to leave my gear hooked to the antenna in the winter. I think I checked into one weather net this spring, and that's the extent of my amateur activity lately....pretty sad.

Anyway, thanks for the answer.

360. Southside Radio

Yahoo group: IndyHamRadio
Date: 2006-09-05 14:17:46 UTC
From: Brian - KB9BVN
Topic: 360 Message: 360

Alex,

WCARS is a VEC like the ARRL is a VEC. I am a VE for both groups. At Red Cross they have ARRL do the exams every two weeks and the WCARS guys do it the alternating every two weeks.

KA9OOH and N9FOZ were two of my ham radio teachers at the Red Cross in 1988 when I got licensed. Dave's (KA9OOH) wife was my Algebra teacher when I was a freshman at Perry Meridian in 1974. I was involved with the Red Cross radio club from 1988 to about 1990 and then got too busy with Boy Scouts and life to do much radio until 1998.

I am currently a QRP operator. I love to build little CW rigs and put them on the air with sometimes less than adequate antennas and make a few contacts. With the solar cycle in the dumper right now, QRP DX has been very much a challenge.

I'm the editor (although I am taking a break for a few months) of the Flying Pigs QRP Club International newsletter "The Bacon Bits Quarterly"...commonly referred to as the BBQ.

You can check them out at http://www.fpqrp.com

73

Do you have a working HF rig now? If not, I might be able to come up with a loaner CW QRP rig. Let me know.

Brian,

Thanks for the information.....I remember the Red Cross using a VEC (using their forms, etc) called the Western Carolina VEC, but hadn't heard of WCARS....maybe they are one in the same.

It would be interesting to find out how many hams have sprung from Dave, KA9OOH's, mentoring. I bet it's in the hundreds.

THanks for the offer of an HF rig.....I have an old Swan 350 that works, but has no xtal calibrator......it makes me nervous not knowing the exact frequency that I'm on. I am working on a vintage station that will incorporate a Heathkit DX100B and a Collins 51J3. The Heathkit's been restored for about a year - done by W9BZ - Roger. I have to dig into the Collins and make it healthy again. I also need to send my Ten Tec digital Triton IV back to Ten Tec for a PTO rebuild....I really love that little rig...it's been out of action for a couple of years now. I'd do the rebuild myself, but just don't have the time, or the accurate signal generator, to do it. Maybe I'll fire up the old Swan this weekend and get on the air. I've gotten really good signal reports from it......350 watts input'll do that. It needs the cobwebs burned out of the finals. I'd get the Kenwood fixed, but I don't know anyone around here that works on anything anymore....Curran went out of business and that was the end of ham radio service as I knew it. Does anyone on the list do repairs on ancient Kenwoods?

THanks,

Alex

364. MARC Update

Yahoo group: IndyHamRadio
Date: 2006-09-05 15:50:46 UTC
From: Brian - KB9BVN
Topic: 364 Message: 364

The next meeting of the Mid-State Amateur Radio Club is our annual picnic on Saturday, September 16, 2006. Elections will be held along with a very brief meeting.

The picnic/meeting will be held at Union Christian Church, 1267 East County Road 300 South, Franklin, IN. We will meet at about 10:30 am with lunch ready at noon. Elections and meeting will take place after lunch.

Please bring family and friends and any sort of covered dish or dessert (or both if you want). Provided will be soft drinks, hamburgers, hot dogs, buns and condiments.

Talk in will be on the 146.835 repeater (151.4PL).

VEC Testing, Saturday, September 16, 2006

VEC testing will be held at the Johnson County Emergency Operations Center beginning at 9 am.
Stop in, take your test, and then come to the picnic!

<<Agnus Dei, qui tollis peccata mundi, dona nobis pacem.>>

It's a TS-820S

After the static spike, it sounds like its on the wrong sideband, and the frequency display is reading several megahertz off, depending on the band. I think the kilohertz reading on the display is correct, however.

Alex Whitaker <ehscott@...> wrote: Brian,

Thanks for the information.....I remember the Red Cross using a VEC (using their forms, etc) called the Western Carolina VEC, but hadn't heard of WCARS....maybe they are one in the same.

It would be interesting to find out how many hams have sprung from Dave, KA9OOH's, mentoring. I bet it's in the hundreds.

THanks for the offer of an HF rig.....I have an old Swan 350 that works, but has no xtal calibrator......it makes me nervous not knowing the exact frequency that I'm on. I am working on a vintage station that will incorporate a Heathkit DX100B and a Collins 51J3. The Heathkit's been restored for about a year - done by W9BZ - Roger. I have to dig into the Collins and make it healthy again. I also need to send my Ten Tec digital Triton IV back to Ten Tec for a PTO rebuild....I really love that little rig...it's been out of action for a couple of years now. I'd do the rebuild myself, but just don't have the time, or the accurate signal generator, to do it. Maybe I'll fire up the old Swan this weekend and get on the air. I've gotten really good signal reports from it......350 watts input'll do that. It needs the cobwebs burned out of the finals. I'd get the Kenwood fixed, but I don't know anyone around here that works on anything anymore....Curran went out of business and that was the end of ham radio service as I knew it. Does anyone on the list do repairs on ancient Kenwoods?

THanks,

Alex

Alex,

WCARS is a VEC like the ARRL is a VEC. I am a VE for both groups. At Red Cross they have ARRL do the exams every two weeks and the WCARS guys do it the alternating every two weeks.

KA9OOH and N9FOZ were two of my ham radio teachers at the Red Cross in 1988 when I got licensed. Dave's (KA9OOH) wife was my Algebra teacher when I was a freshman at Perry Meridian in 1974. I was involved with the Red Cross radio club from 1988 to about 1990 and then got too busy with Boy Scouts and life to do much radio until 1998.

I am currently a QRP operator. I love to build little CW rigs and put them on the air with sometimes less than adequate antennas and make a few contacts. With the solar cycle in the dumper right now, QRP DX has been very much a challenge.

I'm the editor (although I am taking a break for a few months) of the Flying Pigs QRP Club International newsletter "The Bacon Bits Quarterly"...commonly referred to as the BBQ.

You can check them out at http://www.fpqrp.com

73

Do you have a working HF rig now? If not, I might be able to come up with a loaner CW QRP rig. Let me know.

Brian,

Yes, I agree that MARC gets up too early on Saturday morning for me. I spoke in front of their club about antique radios once about 3 or 4 years ago. Their president (I think he's still the president) Jerry Schantz is a nice guy. I grew up in Whiteland, and took my first amateur radio class and Novice and Tech Plus license exams there in Franklin in 1994. KA9OOH taught my novice class. MARC is a good club, indeed.

I think Rick Reneau and Bill Goodall were running the testing when I got my Extra in 1998 over there at the Red Cross on 10th street. What is WCARS?...I've never heard of that organization....is that the Red Cross club?

I need to get back on the air....I've been off ever since a freak February rainstorm killed my old Kenwood TS-820S.....that'll teach me to leave my gear hooked to the antenna in the winter. I think I checked into one weather net this spring, and that's the extent of my amateur activity lately....pretty sad.

Anyway, thanks for the answer.

Brian - KB9BVN <kb9bvn@...> wrote:
Alex,

Nope. I have been a member of MARC in the past, but I have never been the repeater guy. I manage to make about one meeting a year it seems. They get up too early on a Saturday morning for me. <grin> Those guys have a pretty good club down there in Franklin.

I do work as NWS liason for the Johnson County Severe Weather Net sometimes....but not all the time. Usually Luke is the net control for the severe weather nets.

I help Rick Reneau KB9NDF with the WCARS testing at the Red Cross once in a great while, but the only time I am on 2 meters is when I am at home during a storm.

You know, I think it does have a master reset button somewhere. However, it doesn't have a CPU.....tuning is PTO hooked up with a PLL circuit. I'll try to locate the reset button and press it. I hadn't thought of that....hopefully my memory is correct about there being a reset button on it.

From: n9wb
Topic: 366 Message: 368

The TS-820s does not have a master reset button. There is a Yahoo group called TS-520_820_530_830. We deal with these all of the time. You may want to join that group.

If you give up on it and want to sell it for parts, let me know. But we may be able to help you fix it.

First step is to see if the 9v regulator is working properly.

A little off topic, but one of the members of a railroad historical Yahoo group that I read uses the following as his signature line:

"Lindbergh made it across the Atlantic without a radio, but we can't seem to make it through a check-out line without a cell phone." -- Garrison Keillor

Ironic, isn't it.

A TS-520 Yahoo group! I am looking into that today.
My TS-520 works just fine except for a couple panel
lights that are burned out and the VFO sticks ever so
slightly. I hope to learn tons more through the
TS-520 group. Thanks for mentioning it Walt. There
must be a Yahoo group for everything!

Brian KB9BVN has converted me to a QRP nut, but I
fired up my TS-520 a few times over the weekend and
had a ball. It's a fun old rig.

From: n9wb
Topic: 374 Message: 374

Is anybody here familiar with the Kenwood TS-830? There has been some discussion about a legend that the ones with the gold label are somehow different than the ones with the silver label. After much research, I have the answer. I am forwarding it to you from the TS-520_820_530_830 group.

Subject: [TS-520_820_530_830] The Gold TS-830 exposed and The Heil "Goldline" Name

RE TS-830 Gold Edition, the facts.

The Kenwood Gold TS 830 uses special beta components that will outlast standard 830s and incorporates a electron accelerator in the screen grid circuit that has several advantages.

It was coveted by DX'ers because their signals would arrive at the DX station slightly ahead of the others giving a decided advantage in pile ups.

Unfortunately, the ARRL threatened to pull all of Kenwood's advertising from QSTs if they did not cease manufacture immediately. They considered this cheating in the contests and DX operations.

Kenwood complied and the Gold Kenwood was short lived. These rigs are rare because DX'ers who have them seldom sell them or let it be known that they own them for fear of government reprisal.

When they do end up on e-bay it is rumored that the government runs the biding up and snatches them up never to be seen again.

Bob Heil later coined the name Gold Line for one of his microphone lines and it is rumored that he incorporated a speech accelerator diaphragm comprised of accelloranium, an irradiated form of gold in some of his Gold Line elements, but Bob is very hush hush about this.

And Bob is seldom hush hush.

Glad to hear about data for the old Kenwood series. I have a TS-820S, TS-520 with digital unit for a number of years.

Am wondering if anyone would be interested in a couple of HF rigs from a widow? She has a Kenwood TS-520 and a ICOM-737A. I am not up on current fair prices for those rigs but if anyone is genuinely interested we could work on more details.

My xyl has a Kenwood TS-440 and the digital display went crazy a while back, still not sure if it is the battery or ?

Don /

n9wb <n9wb@...> wrote:
The TS-820s does not have a master reset button. There is a Yahoo group called TS-520_820_530_830. We deal with these all of the time. You may want to join that group.

If you give up on it and want to sell it for parts, let me know. But we may be able to help you fix it.

First step is to see if the 9v regulator is working properly.

You know, I think it does have a master reset button somewhere. However, it doesn't have a CPU.....tuning is PTO hooked up with a PLL circuit. I'll try to locate the reset button and press it. I hadn't thought of that....hopefully my memory is correct about there being a reset button on it.

Dick,

I hope you can get some good advice on the SB-220 that is free. But
if not there are some folks around who repair those for a price. I sent
my SB-200 up to Michigan a few years ago and they guy did a decent
job.

Anyway hope you get it going.

Don, or anyone, what's the difference between an Icom IC-737 and an IC-737A? I looked at the ARRL product reviews, but I don't think they reviewed two different versions. Does the "A" just mean its for the U.S. market? I know Icom has used that model designation on other products.

Bob,

Good question but I have no idea for the present time unless
it has something to do with the built in auto-tuner.

Far as I know the guy seldom used the HF rig, he started out
and checked into some groups then just dropped back to VHF.

I did not look inside the box for the Kenwood 520 but the boxes
from what was noted were real clean like it was on a dealer
shelf.

I have 3 ICOM HF rigs now or would be trying to get the 737A.

And I am with radio gear about like vehicles...that is to say do
not exactly favor one brand over another for the most part.

385. Re: [IndyHamRadio] EDITORIAL: FCC needs to tighten license application process

Yahoo group: IndyHamRadio
Date: 2006-09-09 09:38:29 UTC
From: Bob Burns K4RXR
Topic: 341 Message: 385

Here's more to the story from this week's Newsline broadcast about the Terre Haute radio service company that is running afoul of FCC rules. As it turns out, there is an amateur radio connection:

An Indiana ham who failed to tell the FCC that he has a pair of felony convictions now faces a show cause hearing before an Administrative Law Judge. One that will determine whether or not Timothy M. Doty, WB9MDC, of West Terre Haute, and Commercial Radio Service, Inc. hold the requisite requirements to remain Commission licensees.

In a release made public on Auguust 30th, the FCC says that Doty has held a business interest in Commercial Radio Service since 1991 and is the holder of record for a number of commercial FCC licenses used by the company. Doty also holds a General Radiotelephone Operator License, as well as an Amateur Radio License. And in designating all of these licenses for hearing, the FCC contends that Doty failed to disclose two felony convictions that occurred after the initial grant of at least some of these licenses. One conviction took place in May of 1991 involving the manufacture and possession of unauthorized satellite TV signal descrambling devices. The other in November 2001 for possession of a controlled substance.

The FCC says that subsequent to the first of Doty's felony convictions, Commercial Radio Service filed at least two license applications with the Commission in which the company answered "No" to the question inquiring whether the applicant or any party directly or indirectly controlling the applicant had ever been convicted of a felony in state or federal court. Doty at that time held a 50% interest in Commercial Radio Service, Inc.

The Show Cause hearing will be used to determine if Doty and the company will be permitted to retain any FCC licenses at all. The proceeding will also determine whether forfeitures should be imposed against Commercial Radio Service for willfully and repeatedly violating Commission rules relating to truthful and accurate statements to the Commission and for failing to timely amend pending Commission applications to disclose Mr. Doty's convictions.

I spoke with someone last night that is involved with this case. This Doty guy is only the tip of the iceberg.

Check out these articles from the Terre Haute Tribune Star..

http://tinyurl.com/jprc8

http://tinyurl.com/k5meu

http://tinyurl.com/jkelh

http://tinyurl.com/ew8hk

Former Vigo County Emergency Management Director Richard Setliff claims he removed the question, "Have you ever been convicted of a felony?" from the application in the hiring process for his successor.

His chosen successor was to be convicted felon Deputy director Donald D. VanHorn....except for once Setliff didn't get his way.

Now this story is a real head scratcher.....VanHorn, a convicted felon, and a Deputy Director of the Emergency Management Agency, gets a nice reward....29 days of vacation pay. The Vigo county Board of Commisisoners decided to pay VanHorn 29 days of vacation pay because they have a crappy record keeping system. VanHorn "retired" from the EMA on August 25th, after numerous porno tapes, assault weapons, ammo canisters, and other non EMA items were discovered in his offices. The decision to pay VanHorn was based on the statements of three EMA employees...The three employees' statements were made by former EMA director Dick Setliff and former part-time employees Robert Arnett and Otis W. Williams Sr. GOOD GRIEF.

What the hell is going on in Terre Haute??

http://tinyurl.com/kjbqf

So, when the FCC shuts down CRS, and revokes their commercial licenses...what will Terre Haute be using for freqs?

Could Vigo County hams be called into action to help with this temporary communications problem?

FYI, the September meeting of HCARS is a tour of
the NWS Indianapolis office. Because of the
limited facilities, this tour is by advance
reservation only. There will be no HCARS meeting
this month at the Government Center.

The October meeting will come off as scheduled,
however it will be at the Hendricks County Senior
Citizens Center in Danville as a result of the
Government Center being closed that day for
observance of the Columbus Day holiday.

Bob Burns, Vice President
Hendricks County ARS

Windom Antenna Comments:
Today I decided to put my antenna back up from the August storms. Oh, what to put up. After surfing the web, digging into my handbooks, I find I am back to my proven performance antenna called the Windom. I have used the single wire fed (true) Windom antenna for over 50 years now on 80, 40, and 20 meters for WAS, WAC and DXCC. It is such a simple antenna to build and use. One does not need those 4:1 or 9:1 baluns, just need the basic antenna and a roller inductor or L match. In fact if you are using a glowbug type rig you will not need those either. But with our 50 ohm solid state wonders we now used, best to take a few minutes and tune it. Many of our modern rigs now contain an automatic L tuner and they can provide an excellent match on all but the WARC bands.

The only true Windom is the single wire fed design. The others are off-center fed dipoles, or off-center fed folded dipoles. The true Windom is a resonant antenna.

The antenna came about in 1927 - 1929 as a project to measure the current distribution in a dipole type antenna.

There are so many myths about this antenna both true and false I will not go into them. However, the Windom is a resonant antenna and it is not a balanced antenna. To work properly you do need a decent ground but still it can be an inperfect one. You do not need radials or even a good conducting surface for the antenna. However, the performance is enhanced if you put down a least one good electrical type ground rod (6 to 8 ft in length). The Windom is a higher impedance antenna (typically about 400 ohms) so you may have considerable error in the ground connection and still have a very low loss antenna.

You ask "Have you used other antenna?" Yes, lots of them - Zepps, dipoles, extended zepps, bazooka, verticals, trap antenna of various types, beams, Vees, short dipoles, etc. I have ran everything from a 2 KW PEP linear to under 100 millwatt qrp transmitter.

The Windom will equal all but a multi-element wire antenna, loop or beam. It is simple to build, simple to tune, simple to install and cheap. However, it is a resonant antenna and one cut for 3.5 MHz will not perform as well on 4.0 MHZ as one cut for 4.0 MHz. It likes even harmonics. Yes, in some cases the feed line will radiate. Do we really care if the feed line radiates for some combinations of frequency and antenna or feed line length? I think not, what we want is a high efficient antenna for the frequency we have cut it and the Windom meets that requirement. It s a forgiving antenna, in that the tap position can vary, the length can vary somewhat and it's feed line can

vary and the antenna still be an excellent performer.

To build one for 40 meters you need 100 ft of wire, a couple of insulators and either a variable inductor or L match. The L of the L match will be 3 uH to 14 uH and the variable C 50 pf to 150 pf. Take the 100 ft of wire folded it into thirds. Cut off one-third and use that as the feed line, The two-thirds will be the main dipole. Fold the main dipole into sixths and fed it one sixth off center. See did not even need a rule to put it up in the wilderness.

I have used them within 8 ft of ground but higher is better, typically at least 20 to 30 ft work well.

Don't waste time with costly baluns, but put the L match at the entrance of your shack (house, etc.) use an RF meter if you have one from a hamfest they always go cheap, or use a nuber #47 lamp. I usually short out the lamp with a short piece of wire 3 or 4 inches long. Tune the L match for maximum brightness of the #47.

Have fun, like I say it is easy to build, easy to install, Cheap and they do work. Pattern is almost the same as if you had used a center fed dipole. Any wire will work, I prefer 16 ga to 12 ga single house wiring. Yes it will stretch. I usually hang it between a couple of trees for a few days before cutting it to length. And before we started shipping all our copper to China it use to be cheap. Still often available in couple hundred feet rolls at some hamfest.

Oh yes, do not forget to use a ground rod or bury 10 to 20 ft of wire for a ground system, I prefer the electrical ground rod. I have used water pipe, copper tubing, and copper clad copper rod and they all work very well.

Have fun, these antenna do work both in the field and for the home qth.

One does not need those 4:1 or 9:1 baluns, just need the basic antenna and a roller inductor or L match. In fact if you are using a glowbug type rig you will not need those either. But with our 50 ohm solid state wonders we now used, best to take a few minutes and tune it. Many of our modern rigs now contain an automatic L tuner and they can provide an excellent match on all but the WARC bands.

The only true Windom is the single wire fed design. The others are off-center fed dipoles, or off-center fed folded dipoles. The true Windom is a resonant antenna.

The antenna came about in 1927 - 1929 as a project to measure the current distribution in a dipole type antenna.

There are so many myths about this antenna both true and false I will not go into them. However, the Windom is a resonant antenna and it is not a balanced antenna. To work properly you do need a decent ground but still it can be an inperfect one. You do not need radials or even a good conducting surface for the antenna. However, the performance is enhanced if you put down a least one good electrical type ground rod (6 to 8 ft in length). The Windom is a higher impedance antenna (typically about 400 ohms) so you may have considerable error in the ground connection and still have a very low loss antenna.

You ask "Have you used other antenna?" Yes, lots of them - Zepps, dipoles, extended zepps, bazooka, verticals, trap antenna of various types, beams, Vees, short dipoles, etc. I have ran everything from a 2 KW PEP linear to under 100 millwatt qrp transmitter.

The Windom will equal all but a multi-element wire antenna, loop or beam. It is simple to build, simple to tune, simple to install and cheap. However, it is a resonant antenna and one cut for 3.5 MHz will not perform as well on 4.0 MHZ as one cut for 4.0 MHz. It likes even harmonics. Yes, in some cases the feed line will radiate. Do we really care if the feed line radiates for some combinations of frequency and antenna or feed line length? I think not, what we want is a high efficient antenna for the frequency we have cut it and the Windom meets that requirement. It s a forgiving antenna, in that the tap position can vary, the length can vary somewhat and it's feed line can vary and the antenna still be an excellent performer.

To build one for 40 meters you need 100 ft of wire, a couple of insulators and either a variable inductor or L match. The L of the L match will be 3 uH to 14 uH and the variable C 50 pf to 150 pf. Take the 100 ft of wire folded it into thirds. Cut off one-third and use that as the feed line, The two-thirds will be the main dipole. Fold the main dipole into sixths and fed it one sixth off center. See did not even need a rule to put it up in the wilderness.

I have used them within 8 ft of ground but higher is better, typically at least 20 to 30 ft work well.

Don't waste time with costly baluns, but put the L match at the entrance of your shack (house, etc.) use an RF meter if you have one from a hamfest they always go cheap, or use a nuber #47 lamp. I usually short out the lamp with a short piece of wire 3 or 4 inches long. Tune the L match for maximum brightness of the #47.

Have fun, like I say it is easy to build, easy to install, Cheap and they do work. Pattern is almost the same as if you had used a center fed dipole. Any wire will work, I prefer 16 ga to 12 ga single house wiring. Yes it will stretch. I usually hang it between a couple of trees for a few days before cutting it to length. And before we started shipping all our copper to China it use to be cheap. Still often available in couple hundred feet rolls at some hamfest.

Oh yes, do not forget to use a ground rod or bury 10 to 20 ft of wire for a ground system, I prefer the electrical ground rod. I have used water pipe, copper tubing, and copper clad copper rod and they all work very well.

Have fun, these antenna do work both in the field and for the home qth.

I haven't had the chance to look at his guestbook but I know there are robots that go out and look for guestbooks in order to fill them with spam.

Our local contest club K9CU has a webpage at qsl.net which did include a guestbook. We started getting all of these postings to it from drug companies, gambling casinos, you name it. I removed them from the guestbook, usually shortly after they showed up (I am the site webmaster).

I turned it off for about 4 months hoping it would stop the spammers. I turned it on again and within HOURS four spam guestbook entries showed up. I just turned off the guestbook feature permanently. I asked if someone would e-mail me any entries they had for it. To this date no one has done that.

If you have a guest book, you have to stay on it CONSTANTLY to get rid of the garbage.

Brian & Zack,

In all probability I agree with the situation as to how it can happen with guestbooks and in particular with Stan's page. Further, with grandson also being a ham do not think it would be good for him to be exposed to those type of posts either.

Oh well, the write up on the windom antenna was my reason for going to view things. In fact I am thrashing about a bit to find someone to put on a program for antenna building, that is we would like to get a guest speaker to visit our club and do a program on building either a 2 meter or 440 beam antenna or both. Folks can often get tired of hearing the same old gums a flappin in my case so we would like to get some new voices to do a program.

When visiting the Indiana Section web page concerning guest speakers listed it seems like they are no longer active or do not want to drive up to Columbia City to put on a program. At least that is what I ran up against in the past.

So if we got any beam builders out there who would be willing to come up this way I am sure we would be able to handle the fuel situation. Do we have any takers???

Yes, we know there are plenty of books, web pages, videos etc., but it is more effective to have a guest speaker on the topic.

Anyway know this request may be a bit off topic but wanted to throw it out there for thoughts to see if we could a new voice directed at the club.

Thanks,

Don / KA9QWC
==========

407. Hoosier Hills Hamfest Update - QRP Forum!

Yahoo group: IndyHamRadio
Date: 2006-09-16 12:33:58 UTC
From: Brian - KB9BVN
Topic: 407 Message: 407

The 45th Annual Hoosier Hills Hamfest will be held on October 8th, at the Lawrence County Fairgrounds.

This is one you do not want to miss out on! There will be a special QRP Forum at 10AM, so bring your rigs, and any of your projects to "Show and Tell". This is a great way to meet other QRPers and share some stories and ideas.

Your forum hosts this year are Brian Murrey (KB9BVN) and Ivin Flint (W9ILF). There will be some prizes to pass out, thanks to the QRP Amateur Radio Club International.

Hamfest tickets are $8.00 and the gates open at 6AM. Children under 12 are admitted for free when they are with at least one paying member.

You can register for license testing at 11AM, and the testing will begin at Noon. Also there will be free Bingo beginning at Noon, and hourly prize giveaways start at 8AM and the huge grand prize drawing is at 2PM.

See http://www.hoosierhillshamfest.org for all the details. Southern Indiana is beautiful this time of year, plenty of camping in the area, so come down and spend the weekend!

410. RFTB Sprint!!

Yahoo group: IndyHamRadio
Date: 2006-09-18 00:43:53 UTC
From: Brian - KB9BVN
Topic: 410 Message: 410

This evening, the Flying Pigs Amateur Radio Club International will be holding its monthly Run For The Bacon. This is a friendly, two hour QRP CW Sprint, which is open to ALL radio amateurs, will last from 9:00 - 11:00PM EDT (0200-0400 UTC Monday).

You may work stations once per band on 160, 80, 40, 20, 15 or 10 Meters. Suggested starting frequencies are 1.812, 3.562, 7.044, 14.062, 21.062, and 28.062 MHz.

The exchange is RST, S/P/C (State, Province, Country) and Flying Pigs membership number. If you're not a member of the Flying Pigs, and would like to be; then please click on the "membership" hyperlink on http://www.fpqrp.com/. Otherwise, non-members can just use their output power figure.

You can report your score via the Autolog page which can be found at :

http://www.fpqrp.com/fpqrprun.html

or you can mail your logs to the address given on the Autolog page. The deadline for logs is September 25th at 2400 UTC.

As like last month, the top three scorers will win a certificate. Keep in mind that anyone who participates in 10 out of 12 RFTBs this year will earn a special Certificate of Merit at the end of the year. So please use the Autolog if you've participated; but were unfortunate enough to make any contacts. In this case, trying helps!

413. Brad Hensley, AB9JD Still Missing

Yahoo group: IndyHamRadio
Date: 2006-09-21 16:17:50 UTC
From: Don West
Topic: 413 Message: 413

Hoosier Hams,

There will be a 30th birthday celebration for Brad, AB9JD, at a vacant lot next to the Hubler Mazda dealership on US 40 in Plainfield (2260 E. Main St.) 1-3 PM, Saturday, 9/23, by his friends and family. Donations will be accepted at that time.

For those of you that my not be familiar with this case, this is the most recent public information about the case that I can find. From the Indianapolis Star, May 15, 2006.

"May 15, 2006
By Dan McFeely

The family of a missing Plainfield man has offered a $10,000 reward for information on his whereabouts.
There has been no new developments in the case of Brad Hensley, 29, who has been missing since Jan. 12, according to Sgt. Jill Lees of the Plainfield Police.
Hensley's wife, Kristin, said she woke her husband that morning for work, but once he left their home, he disappeared along with his car, two cell phones and a bank debit credit card that has not been used since.
Sgt. Lees said there is also a partial reward for information leading to the recovery of Hensley's car, which his wife is still making payments on. The car is a red 2005 Jeep Wrangler with a Red Cross sticker on the windshield and license plate 20516V.
Last weekend's Mothers Day observance was tough for the family, Lees said, because Hensley is an only child.
"The family is still suffering," she said.
Anyone with information on this case is urged to call Sgt. Lees at the Plainfield Police Department, (317) 839-8700."

Source: http://www.indystar.com/apps/pbcs.dll/arti...NEWS01/60515033
<http://www.indystar.com/apps/pbcs.dll/arti...NEWS01/60515033>

These further details are from MD-Times.com posted Feb. 3rd, 2006.

"Hensley drives a 2005 red soft top Jeep. It has a Red Cross Volunteer sticker on the left driver-side windshield. The license plate number is 20516V.

Hensley is approximately 5-feet-8-inches tall, weighs between 170 and 180 pounds. He is Caucasian. He has a medium build and light brown hair, which is kept short and shaved. He has blue eyes and a tattoo on his left bicep of a Confederate Flag with initials HBH. Hensley also has a tattoo on his left shoulder of a steer skull. He has a scar on his

stomach and a mole in the middle of his back. According to his wife, Hensley usually has a mustache and goatee.

Hensley was last seen wearing a maroon T-shirt with "Horton Trained" in gray lettering, blue jeans, a gray Old Navy fleece sweatshirt, tennis shoes, a gold wedding band, and a Timex watch with black nylon band. Hensley normally wears a baseball cap and sunglasses, but she is unclear about what cap he was wearing the day he disappeared. Hensley is a carpenter. He also is a Red Cross volunteer, certified in CPR and first aid. He has experience as a Ham Radio Operator. "

414. IN - ARRL Section News for August

Yahoo group: IndyHamRadio
Date: 2006-09-22 12:45:55 UTC
From: Brian - KB9BVN
Topic: 414 Message: 414

Indiana Section News for August 2006

Condolances to the Family and Friends of these amateurs who became a Silent Key during August: Daniel H. Kellum WD9FUW, Norman, IN, August 6; William E. Wolford AA9LT, Tipton, August 19; Marion Nash W9MA, Muncie, August 28. They will be missed.

With the lower gasoline prices, maybe you'll be traveling to a hamfest this fall. September 24 is the Greenfield Hamfest at the Hancock County Fairgrounds (http://w9atg.org/); October 7-8th, the Hoosier Hills Ham Club, Bedford, at the Lawrence County 4-H Fairgrounds (www.hoosierhillshamfest.org), and October 8th the Lake County ARC Hamfest at Crown Point (www.qsl.net/w9lj/). Of Course,...the Indiana State Convention (Fort Wayne Hamfest & Computer Expo) at the Allen County War Memorial Coliseum on November 18-19 (www.fortwaynehamfest.com). November 25 is the EARS & The Ham Station Evansville Hamfest at the Vanderburgh Co. 4-H Center Auditorium (http://w9ear.org/hamfest.htm)

The Fall Meeting of the Indiana Radio Club Council (IRCC) will be on October 14, in Indianapolis. The meeting location TBA. Please ask your club's representative to be there. Check the Indiana Section ARRL Website http://www.inarrl.org/ircc.html for details. There is still time to get your nomination in to the committee for Indiana's Outstanding Amateur of the Year award. The deadline is September 23. Please hurry.

The annual Indiana Section ARES Simulated Emergency Test (SET) will be Saturday October 7, 1000 Eastern Time (1400 UTC). SEC David Pifer N9YNF will be passing traffic to each jurisdiction in Indiana. The frequency used will be 3910 KHz. Please have someone in your area on the frequency to handle formal message traffic. If your EC is having a local SET at that time. your ARES group can fully "participate." If not, there still needs to be a station present on the frequency to handle messages into and out of your jurisdiction.

Even though there was little emergency activity during August, LaPorte County and the surrounding counties has an episode of high wind (106 mph) recorded at the Michigan City Coast Guard station. Many amateurs lent there skills and service during the power outages and downed wires during the period from Aug 23-24. Thank You!

4 Public Service events were reported during August, with 192.5 person-hours of activity reported. Total number of ARES operations reported was 118, with 850.55 person hours of service reported. 19 EC reports received by Dave Pifer N9YNF, Indiana SEC.

The following VHF/UHF Net Managers reported their net's activity during August: KC9BHJ, N9ZMY, KE9WI, WD9HTN, KB9UAG, KF9EX, WB9RVN, WB9NCE, WR9G, KA4HWX, W9AU, and KA9QWC. If your Net Manager's callsign does not appear in this list, then no report of your net's activity was sent to the Indiana Section VHF/UHF Net Manager, John Kinley KC9BHJ. Send monthly reports to: kc9bhj@....

August Section Net Activity:
NET FREQ DAILY TIMES (UTC) QNI QTC QTR SESS
ITN 3910KHz 1230/2030 239 137 1121 56

415. New poll for IndyHamRadio

Yahoo group: IndyHamRadio
Date: 2006-09-22 19:41:24 UTC
From: IndyHamRadio@yahoogroups.com
Topic: 415 Message: 415

Enter your vote today! A new poll has been created for the
IndyHamRadio group:

Greetings IndyHamRadio Member,
I seldom get much feedback from the membership about what you like or dislike or how to improve the group. Recently a member surfaced some concerns, and honesty, I do not know how everyone feels about them. We have this polling tool available and I am hoping that you will take the time to let me you opinions.
Question 1. How do you feel about the re-posting of information from other groups or reflectors, such as the Indiana ARRL Section News, or the INHAM reflector? Select all choices that apply. Your responses are anonymous. This poll will close Oct. 6th.
Thank you,
Don West, W9DEW
Moderator

o If I want to read stuff from other sources, I'll subscribe to it.
o It does not bother me. If I am not interested, I just delete it.
o Not an issue for me one way or the other.
o Some of these are of interest and I would not have heard about it otherwise, so, yea, they are OK.
o Other. Please post your thoughts or send them to me.

To vote, please visit the following web page:
http://groups.yahoo.com/group/IndyHamRadio/surveys?id=2061208

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

416. Poll Questions

Yahoo group: IndyHamRadio
Date: 2006-09-22 19:52:30 UTC
From: Don West
Topic: 416 Message: 416

Greetings IndyHamRadio Members,
I seldom receive much feedback from the membership one way or the other, so I have little confidence in the "sense of the group". A member recently surfaced some concerns and I honestly have little idea about the views of the membership.
Fortunately, there is a "polling" feature. I will be sending out a few (2-4) questions seeking your opinions. I know that we all have way to much to do, but I would consider it a personal favor, if you would take a couple of minutes to give me your feedback. Your vote is anonymous. I will be sharing the results with the group. The polls will close on Oct. 6th.

Thank you and 73,
Don West, W9DEW

421. Indy Hams Outing Reminder

Yahoo group: IndyHamRadio
Date: 2006-09-22 21:07:16 UTC
From: Brian - KB9BVN
Topic: 421 Message: 421

Patrons of IndyHams list,

Just a reminder that a few of us will be camping at Johnson County Park on Friday October 13th, we will be bringing rigs and homemade antennas, and stuff...sort of like a mini-field day.

If no one objects, I will volunteer to bring stuff to make foil pack dinners. What are foil pack dinners?

Some people call them hobo meals...

http://tinyurl.com/jn3wa

Typically they are a gob of ground meat, some sliced potatoes, sliced onions, sliced carrots, maybe some mushrooms, maybe some corn...all in a pile...then wrapped up in a foil pack. You set that on the hot campfire coals for 10 mins, flip it, wait 10 more mins and you have a awesome hot cooked dinner and no dirty dishes.

I use ground chicken, or beef, or pork, and I've even used salmon and I've made these with Bluegill.

Anyway, I am planning on being there with my fishing pole vertical and my KX1 and a couple of batteries...I am trying to get the north end of the campground reserved for us so we'll have some trees to throw wires in to.

If you are coming to camp, and if you want me to supply you with foil pack supplies, please let me know so I show up with enough food. If you want to bring your grub, that's OK too.

424. Hams in your area

Yahoo group: IndyHamRadio
Date: 2006-09-24 01:01:45 UTC
From: Jim Dooley
Topic: 424 Message: 424

I am not sure how many of you may already know of this but the vanity callsign site of N4MC has a nifty feature for locating any hans who may reside near you.

On the main page of his site, http://www.vanityhq.com/ in the lower left is an area labled N4MC's ham locator.

It can be used to show you a map of any area with pins to locate any listed hams living there.

A rather nice feature to learn who may live near with the same hobby.

Jim

427. 40M IS WORKING NOW

Yahoo group: IndyHamRadio
Date: 2006-09-25 01:10:45 UTC
From: Brian - KB9BVN
Topic: 427 Message: 427

I have been playing radio for about an hour. I have California, Nova Scotia, Ontario, CT and MA in the last 5 contacts...I'm running 4w to a attic dipole. My dipole is firing to the north and south so I am getting CA and MA/CT off the ends. The band must be in decent shape, my Ontario contact is 1100 miles away and he gave me a 599.

Anyway...heads up! Have fun!

429. FREE Morse Code Course

Yahoo group: IndyHamRadio
Date: 2006-09-26 16:22:59 UTC
From: Brian Murrey
Topic: 429 Message: 429

Fellow Hams,

I have been granted permission from Chuck Adams K7QO to distribute his wonderful Morse Code Course. The course is CD ROM based and is a collection of over 100 MP3 files and a great text goes along with it. You can go from Zero to 30 WPM within a few weeks if you follow the course.

The course is free, and this is what you need to do:

1. Send me a blank CD ROM, with a postage paid, self addressed stamped return mailer.

2. I will burn the code course to your CD and mail it back.

It's that simple.

My mailing address can be found on QRZ.COM - just look me up.

433. Hamfest Reminder

Yahoo group: IndyHamRadio
Date: 2006-10-03 03:42:01 UTC
From: Brian - KB9BVN
Topic: 433 Message: 433

The 45th Annual Hoosier Hills Hamfest will be held on October 8th, at the Lawrence County Fairgrounds.

This is one you do not want to miss out on! There will be a special QRP Forum at 10AM, so bring your rigs, and any of your projects to "Show and Tell". This is a great way to meet other QRPers and share some stories and ideas.

Your forum hosts this year are Brian Murrey (KB9BVN) and Ivin Flint (W9ILF). There will be some prizes to pass out, thanks to the QRP Amateur Radio Club International.

Hamfest tickets are $8.00 and the gates open at 6AM. Children under 12 are admitted for free when they are with at least one paying member.

You can register for license testing at 11AM, and the testing will begin at Noon. Also there will be free Bingo beginning at Noon, and hourly prize giveaways start at 8AM and the huge grand prize drawing is at 2PM.

See http://www.hoosierhillshamfest.org for all the details. Southern Indiana is beautiful this time of year, plenty of camping in the area, so come down and spend the weekend!

438. Crown Point In.Hamfest

Yahoo group: IndyHamRadio
Date: 2006-10-06 16:17:26 UTC
From: Don
Topic: 438 Message: 438

----------For the Hams up North around Crown Point ----------

Well it Has always been a Family tradition that My Children always knew Dad was going to The LCARC Crown Point Hamfest before anything else, On Fathers Day And as My Grandchildren (14) Plus 1 Great gets older I would take one of them, then go down to the Lake and Fish for a Few hours, I have always found some great deals at good prices, I think in going to Hamfest for over 3o yrs the Smaller ones are sometimes Best because most of the hams are local and Know each other and They try and sell working Equipment , Not like the big Hamfest Dayton , Where some feel they will never Hear or see You again

---------- a Date Change for the LCARC----------
Hamfest which will not Be on Fathers Day this year, But on 0ct 8 , and They hope to return to the Fathers Day date next year . If anyone gets a Chance Please Attend and Support our Local fellow Hams and get to Meet and Talk to Each other. Also let them know about our Little 224.740 repeater Covering all of Lake County and Beyond and Everyone is Welcome

PS This is a Small Hamfest and as everyone knows in the last Few yrs with E-Bay and the WWW , Hamfest have been changing to smaller and more like Flea Markets including the Fleas Ha Ha

443. Poll Results

Yahoo group: IndyHamRadio
Date: 2006-10-08 13:50:37 UTC
From: Don West
Topic: 443 Message: 443

IndyHamRadio Members,
The results of the three polls are in and I would like to share them with you, along with my own "subjective" interpretation of them.

POLL QUESTION: Question #1. How do you feel about the forwarding of information from other groups or reflectors, such as the ARRL Indiana Section News or from InHam reflector? Check all that apply.

CHOICES AND RESULTS
- If I want to read stuff from other sources, I'll subscribe to it., 3 votes, 17.65%
- It does not bother me. If I am not interested, I just delete it., 4 votes, 23.53%
- Not an issue for me one way or the other., 1 votes, 5.88%
- Some of these are of interest and I would not have heard about it otherwise, so, yea, they are OK., 9 votes, 52.94%
- Other. Please post your thoughts or send them to me., 0 votes, 0.00%

INTERPRETATION: While this is an issue to some members, clearly most members either like to receive these notices or do not dis-like it.

POLL QUESTION: Question #2. How do you feel about discussions on the group that are open to all, but the topic is not related to Indiana events or activities? Select the answer that comes closest to your opinion.

CHOICES AND RESULTS
- It is fine with me. Sometimes the topics are interesting to me., 7 votes, 58.33%
- It is OK, on an occasional basis. , 0 votes, 0.00%
- I do not care one way or the other. It is not an important issue for me., 2 votes, 16.67%
- I would prefer that members that want to have an "off topic" discussion, do it directly with each other., 3 votes, 25.00%
- My opinion is not listed., 0 votes, 0.00%

INTERPRETATION: Clearly this is an issue for some 25% of the membership. Nevertheless, 75% either like or are not concerned about it. I would simply ask members to continue to be respectful (as everyone has in the past) of the wishes of rest of the members. If a topic gets too far from Ham Radio in Indiana or too narrow (discussing filiment life in Russian made 3-500z tubes, for instance) consider carring on the conversation directly with those interested.

POLL QUESTION: Question #3. How do you feel about "reminders" sent from the calendar? Select the choice that comes closest to your opinion.

CHOICES AND RESULTS
- They are OK. Without them, I would miss events., 12 votes, 92.31%
- I would rather just check the calendar myself., 0 votes, 0.00%
- I do not care one way or the other. It is not an imporant issue for me., 1 votes, 7.69%

INTERPRETATION: Looks like this is a "non-issue."

Thanks to everyone that took the time to share their opinion in this un-scientific poll. While the voting is a small percentage of the membership, it is my assumption that those that care about these issues are likely the ones that voted.

Best Regards to all,

Don, W9DEW

447. Campout Update

Yahoo group: IndyHamRadio
Date: 2006-10-09 19:11:28 UTC
From: Brian Murrey
Topic: 447 Message: 447

Kids,

The WX is looking a bit exciting for Friday night. I am planning on leaving my office by 3PM and heading to the park...ought to get me there with my stuff by about 5PM...I have a red 2004 Taurus with a hamstick on the truck...easy to find me.

If you are coming to camp...bring raingear and rubber boots. It might get wet AND cold. I will be bringing a 10 by 10 EZ-UP shelter thingie that we can drag a picnic table under and we can work from there. My plan is to just use my KX1 with a hamstick on my car. I have hamstick for 10-15-20-30-40 meters, I can bring them all if you guys want to try some of the higher bands...I was figuring 30m and 40m would be best for me.

I will bring a coleman stove, and a coleman lantern as well. Everyone ought to plan on their own food. I am bringing the store primarily as a way to make coffee and or hot chocolate. I lost my dutch oven, if someone wants to bring one and some charcoal, let me know and I will grab the goods to bake a apple crunch cobbler. I've been cooking cobblers for over 25 years now, so I finally have it figured out...they're good and good for you. <grin>

The WX may be bad, it'll put a damper on the event but I'm OK with rain and snow...I just hate wind when its raining and snowing.

Gang,

Have Dutch oven, will travel. I've cooked lots of things in my Dutch oven but not apple crunch cobbler. I would like to learn how. BTW, are open fires allowed at the park? Do we have an area or location in the park yet? I myself have never been to this place and might need talked in on two meters before it's over. My antenna will tune 10-40 meters and was planning to operate CW QRP on 40 and/or 30 meters. Not crazy about the WX being an issue but I will plan for rain and hope for better.

Tom,

How many quarts is your dutch oven? I need ot know how much cobbler stuff to buy. Bring charcoal please.

Yes, we can have a campfire. The campsites have fire rings. I have no firewood, I'll see what I can come up with. Anyone got any firewood they want to donate?

What kind of antenna are you going to put up?

The campgrounds are in the middle of the park, I was thinking we want to camp on the north edge of the area, it's about the only place with tall trees in the event we want to toss up a wire or two.

Here's a link to the park website:

http://www.johnsoncountypark.com/johnsonpark.htm

I think the camping is like $8 or $10 for the night...can't remember.

Hey Brian and campout gang,

I had planned on attending this (first of many, I hope) event. However, it clashes with my annual astronomy event in Pennyrile State Forest in Kentucky. Hopefully, I'll be able to attend the next one!

I am also hoping that the weather man is incorrect, and it doesn't turn into a "FYBO" campout!!! (FYBO = Freeze your butt off)

Have fun everyone!

PS --- Brian, Eric Rogers says "Hello"!! (Another "blast from the past" for you!)

Hey Mike,

I hope you guys have better WX down there than we're supposed to get. It'll be hard to play with the telescopes if it rains/snows. Eric's name sounds familiar, is he another one of my old BBS users? Boy, those were the days eh?

I suppose we'll do this camp out thing again, Ivin is trying to talk me into BACKPACKING into the Hoosier for some remote hillside radio stuff...I haven't had my backpack on in almost 10 years. I wonder if I could hire someone to carry my stuff, like they did on Skull Island when they were hunting for King Kong.

I can camp in the cold, I can camp in the wet....but I hate doing both at the same time.

Hi again Brian
>>> I hope you guys have better WX down there than we're supposed to get.
It'll be hard to play with the telescopes if it rains/snows.
Yes it is! It's a week long event, so hopefully the weather won't be bad
the entire time. Besides, cold is usually associated with clear skies, so
perhaps I'll get to play with a few new toys while down there. Besides, I
have managed to acquire an RV (2006 Fleetwood Mallard) --- it sure beats the
tent, and the furnace works GREAT!!!

>>> Eric's name sounds familiar, is he another one of my old BBS users? Boy,
those were the days eh?
Actually, he wrote some BBS software several years ago. Your name popped
into memory and he says that you sounded awfully familiar to him.

>>> I can camp in the cold, I can camp in the wet....but I hate doing both
at the same time.
Ha, a couple a hundred years ago --- in basic training, I promised myself
that I would never do that again --- and I never have!!!

JOTA has been a staple of radio and Boy Scouting for decades. I was wondering if any of you will be helping with JOTA this year? The 49th annual JOTA is October 21st and 22nd.

See web for more details: http://www.scout.org/wse/jota.shtml

I have another duty that weekend, as I am the grill master for our local Knights of Columbus Open House weekend. If you're in the Greenwood area on Saturday the 21st after 4PM...stop by for a free cookout and hayrides. see http://www.kofcgreenwood.org for details on that.

Here is a link to the official JOTA circular, including freqs and times, etc etc.

If you are running a JOTA station, please let me know when and where and I can try to send some boys your way.

Ok, thanks Don. I usually use qth.com, but I have a couple of heavy items that I'd rather sell locally. And of course the tower.

Yaesu FT 1000 MP Mark V Field hf transceiver 160-10 meters, only 1 year old, it has the Inrad roofing filter mod, and a Inrad 500 hz filter in the third IF now also. Have Manual, original box, looks and works like new, $1400.

MFJ 962D Roller Inductor 1.5 Kw antenna tuner, $125

Ameritron AL-811 amplifier, 160-10 meters, around 500 watts out, excellent shape. With manual and original box, not quite 2 years old, $450.

Heil Goldline mic, with wide and HC5 elements. Desk stand, cable. $125.

Heil FS-2 Foot Switch, $25.

Yaesu FT 2800 2 meter rig, 65 watts out on high power, never mobile, $125.

275 feet of coax, double shield, a bit larger then RG8, it has no markings on it anywhere. Checked for continuity Probably worth a lot more to the right person, $50.

67 feet of Rohn 25G, has the flat top section. $200. Mike, K9MI (765) 622-7782 Anderson (Madison County)

Thanks.... 73, Mike k9mi@...

Brian,

My Dutch oven has a big 10 on the bottom. 10 quart? Not sure but it measures 12 inches across and is 4.5 inches deep. I have one of the fishing poles that extend to about 20 ft and was thinking about using that as at least one support. (Maybe the center) I also have my BLT tuner and a wire antenna that tunes 10-40 meters with it. Nothing to hard to put up.

Tom,

How many quarts is your dutch oven? I need ot know how much cobbler stuff to buy. Bring charcoal please.

Yes, we can have a campfire. The campsites have fire rings. I have no firewood, I'll see what I can come up with. Anyone got any firewood they want to donate?

What kind of antenna are you going to put up?

The campgrounds are in the middle of the park, I was thinking we want to camp on the north edge of the area, it's about the only place with tall trees in the event we want to toss up a wire or two.

Here's a link to the park website:

http://www.johnsoncountypark.com/johnsonpark.htm

I think the camping is like $8 or $10 for the night...can't remember.

Gang,

Have Dutch oven, will travel. I've cooked lots of things in my Dutch oven but not apple crunch cobbler. I would like to learn how. BTW, are open fires allowed at the park? Do we have an area or location in the park yet? I myself have never been to this place and might need talked in on two meters before it's over. My antenna will tune 10-40 meters and was

planning to operate CW QRP on 40 and/or 30 meters. Not crazy about the WX being an issue but I will plan for rain and hope for better.

Subject: [IndyHamRadio] Campout Update

Kids,

The WX is looking a bit exciting for Friday night. I am planning on leaving my office by 3PM and heading to the park...ought to get me there with my stuff by about 5PM...I have a red 2004 Taurus with a hamstick on the truck...easy to find me.

If you are coming to camp...bring raingear and rubber boots. It might get wet AND cold. I will be bringing a 10 by 10 EZ-UP shelter thingie that we can drag a picnic table under and we can work from there. My plan is to just use my KX1 with a hamstick on my car. I have hamstick for 10-15-20-30-40 meters, I can bring them all if you guys want to try some of the higher bands...I was figuring 30m and 40m would be best for me.

I will bring a coleman stove, and a coleman lantern as well. Everyone ought to plan on their own food. I am bringing the store primarily as a way to make coffee and or hot chocolate. I lost my dutch oven, if someone wants to bring one and some charcoal, let me know and I will grab the goods to bake a apple crunch cobbler. I've been cooking cobblers for over 25 years now, so I finally have it figured out...they're good and good for you. <grin>

The WX may be bad, it'll put a damper on the event but I'm OK with rain and snow...I just hate wind when its raining and snowing.

Subject: Emergency Communications Training

A two-week training class in Amateur Radio Emergency Communications will be held November 11 and 18 in the Emerald room at the new Central Library in Newburgh (at the southwest corner of Hwy. 66 (Lloyd Expressway) and Bell Road). The class will run from 9:30 AM until 12:30 PM both days. This course will be presented by me (but don't let that stop you from attending ! :)). The course will cover procedures, equipment and techniques involved in EmComm. This course is essentially the same as what I've presented in the past; however, if you've already been through the class you're welcome to attend again as we would enjoy having your input. This session is very interactive as I learn from your comments and 'war stories' as well. If you are interested in attending the class please contact me via e-mail or phone at 812-455-9797. There is no charge for the class. If you know of anyone who might be interested in attending please feel free to pass this note on to them.

Thanks! I look forward to seeing everyone on Nov. 11!

Hi Mike,
Yep! Sale of ham gear if fine as long as they are not "commercial" sales (that is, you are running a business).

73,
Don, W9DEW
Moderator
Ok, thanks Don. I usually use qth.com, but I have a couple of heavy items that I'd rather sell locally. And of course the tower.

Yaesu FT 1000 MP Mark V Field hf transceiver 160-10 meters, only 1 year old, it has the Inrad roofing filter mod, and a Inrad 500 hz filter in the third IF now also. Have Manual, original box, looks and works like new, $1400.

MFJ 962D Roller Inductor 1.5 Kw antenna tuner, $125

Ameritron AL-811 amplifier, 160-10 meters, around 500 watts out, excellent shape. With manual and original box, not quite 2 years old, $450.

Heil Goldline mic, with wide and HC5 elements. Desk stand, cable. $125.

Heil FS-2 Foot Switch, $25.

Yaesu FT 2800 2 meter rig, 65 watts out on high power, never mobile, $125.

275 feet of coax, double shield, a bit larger then RG8, it has no markings on it anywhere. Checked for continuity Probably worth a lot more to the right person, $50.

67 feet of Rohn 25G, has the flat top section. $200. Mike, K9MI (765) 622-7782 Anderson (Madison County)

Thanks.... 73, Mike k9mi@...

467. Campout - Update

Yahoo group: IndyHamRadio
Date: 2006-10-13 03:05:01 UTC
From: Brian - KB9BVN
Topic: 467 Message: 467

Sorry about sending this to the list but I don't have all the individual addresses.

I will be LATE to the campout tomorrow. I am working on a bid that is due to a client at 5PM tomorrow. I will need every minute of the day to get it done on time. Then I have to deliver it WAY out on the westend of Indy.

I'm thinking it'll be pushing 8PM before I make it to camp. I am still planning on being there unless everyone bails out.

Is anyone besides Ivin, Tom and I planning on being there? WX update...Friday night, no rain, temps in 30's.

472. D-STAR Activity in Indiana??

Yahoo group: IndyHamRadio
Date: 2006-10-17 22:07:11 UTC
From: Mark Thompson
Topic: 472 Message: 472

HI All -

I live in Chicago and have been active on the digital modes for over nearly 30 years.

Over the last few months I have become knowledgeable in D-STAR digital voice & data technology and I have presented over a dozen introduction / overview D-STAR presentations at ham club meetings in northern Illinois, southern Wisconsin & northwestern Indiana. We are actively working to put D-STAR repeaters on the air in northeast Illinois and will have some announcements soon.

I have also started a Yahoo Group, Illinois Digital Ham, to focus VHF/UHF digital technology & activity. After 2 1/2 months the group has over 325 members and it has dozens of Links & Files for all digital modes, including D-STAR. A link to the group is below.

I am planning to do a D-STAR presentation at November 10th meeting of the Lake County ARC in Merrillville and at the Ft. Wayne Hamfest on Saturday, November 18th.

I would like to know what kind of D-STAR activity there is in Indiana, if there are any D-STAR repeaters on the air and who I might contact to discuss D-STAR in Indiana.

Thanks in advance for your assistance.

73, Mark, WB9QZB

Looking forward to your presentation at Fort Wayne. It's my favorite hamfest and the forums are always worth attending.

I'd like to know if there is any D-Star activity in Indiana, also.

Bob...

474. Re: [IndyHamRadio] D-STAR Activity in Indiana??

Yahoo group: IndyHamRadio
Date: 2006-10-18 12:18:41 UTC
From: Don Evilsizor
Topic: 472 Message: 474

Mark,

I could joke a bit and ask what is D-STAR but essentially out here in the boonies that could often be the case since in past history a lot of us are at the end of the trail so to speak. Seriously I doubt if anyone in our small rural town radio club has any idea what D-STAR is about - but I will post your notice via our members to at least read about it.

I thank you for the announcement on here and you have my attention now to seek some free time at the Fort Wayne hamfest. Generally members of our club work on Friday evening to get vendors inside the coliseum to set up their tables and then shoo them out the door by 9 PM for lockup.

About all I know so far is what has been read on the ICOM ads in the magazines and very little else. And a lot of that is can't remember for now. I just recently found out there is a Echo Link repeater about 3 or 4 miles north of our QTH so need to learn more about that mode too. It is on 147.270 and to make it a bit simple his node number just happens to be 147270 too. I know locally our Indiana pl for this machine is 131.8 and the op is N9MTF.

Again thanks for the information about the forum...at this point in time did you get a time frame when your forum will be? We have some duties/events at the hamfest so my xyl and I do not want to miss it.

Don Evilsizor /KA9QWC

From: Brian - KB9BVN
Topic: 478 Message: 478

Hey all,

Just a reminder about the FREE CD CW Code Course I have been sending out...

All you have to do is send me a self addressed, postage paid, return CD mailer with a blank CD in it. I will burn the Code Course and send it back.

Please NOTE...POSTAGE IS TYPICALLY 87 CENTS both ways. This covers something weighing 3oz. If it is betwen 3 and 4 oz you need to add another 24c to the postage both ways.

If I get anymore postage due disks, I will have to just tell the PO to send it back to you, empty. Sorry if I sound like a crab, I'm out about $5 in postage now and that's three beers and a hot dog at the bowling alley.

Brad, Walt is right on the money in my book also. I don't get to go to Dayton anymore due to my back, but our club, the Madison County ARC, sets up 5 tables every year. 4 or 5 us spend the weekend, and we take not only our own items, but those of other club members also. With Don, W9DIP becoming a silent key earlier this month, we will probably have a lot more then usual. We are in the main room, and always have a banner up with "Madison County Amateur Radio Club" on it. So we are easy to find. They have nice padded chairs for the vendors, so that makes it my favorite. The only strange thing about it (at least to me) is that it opens to the public at 9AM instead of 8AM. But, I think that is probably just a rule of the coliseum. Here is the URL to their web site:

http://www.fortwayneradioclub.org/

In a word, yes.

What has always impressed me about the Fort Wayne Hamfest is the facility. It's held in the Allen County War Memorial Coliseum. The original part of the building was a basketball/hockey arena built in the early 1950's. The space under the coliseum floor is a large open area that, frankly, used to be rather dark and dingy. In the late 1980's, the facility was expanded with an Exposition Center to the south of the coliseum. This is a 100,000 square foot expo hall with high ceilings and bright lights. After the expo center was built, the lower level of the coliseum was refurbished, cleaned-up, repainted, and bright lights installed.

The hamfest uses both the expo center and the coliseum lower level. Everything is indoors, there's plenty of parking adjacent to the building (though they do charge a fee per car for parking), the space is well-lit and properly heated and air-conditioned (shameless plug, my employer installed the temperature controls), and the staff really takes good care of the place. In other words, it's a "primo" place to hold a hamfest!

In addition to the facility, this hamfest always seems to attract a wide variety of good stuff. Even in the days when hamfests were seemingly dominated by computer stuff, Fort Wayne always seemed to have a good selection of radio stuff. You can easily get around the whole hamfest in a day, unlike Dayton, while still seeing a broad spectrum of goods.

Unfortunately, Fort Wayne, like most hamfests, seems to be in a decline. There were several empty tables in the expo center last year and the coliseum lower level was less than two-thirds full of tables. This year, I understand that the premium table area, which has drapes between rows and draped tables, has been reduced in size. This area was traditionally used by commercial vendors (and computer dealers). The flea market table area has been expanded to fill the space formerly used by the premium tables. I will be curious this year to see how much of the coliseum lower level they use since the show may be shrinking enough to just use the expo center.

None the less, I'm still looking forward to Fort Wayne. I'll be in the flea market with a friend of mine at the north end of the Q-R row.

Bob...

Brad,

Yes, Fort Wayne is one of the better hamfests in Indiana. (I will not get into a discussion of whether it is the best or not.) It is a 2-day fest (actually 1-1/2). One ticket gets you in both on Saturday & Sunday. If you can only attend 1 day, make it Saturday. In addition to the ticket cost, there is a $3 parking fee collected by the Coliseum folks. The hamfest organizers have no control over that.

ALL activities, including the flea market, are indoors. This is a very good thing since it can be quite nippy up there in the frozen northland in mid-November. Most commercial vendors & a portion of the flea market are in the main exhibit hall, while the rest of the flea market is in another area that is almost as large, just not decorated as well.

It is the Indiana ARRL convention, so there are several forums by the League with appearances by the ARRL Central Division Director, Indiana Section Manager, & the Indiana Section Emergency Coordinator.

Also, the Indiana Radio Club Council presents the annual Indiana Amateur of the Year Award during a forum on Saturday.

I drive up during the day on Friday & stay for both days. Unfortunately it is always the weekend of the ARRL Sweepstakes (Phone), so I end up working the SS mobile on the way home on Sunday afternoon.

Hope to see you there,

73, Ray, K9DUR
(West Terre Haute)

Hi Brad,
I guess that depends on what you are looking for in a hamfest, but my personal opinion is, Yes, this is one of the best, if not THE best, hamfests in the state. They have some great forums, a great indoor facility, LOTS of used stuff (my personal favorite part of hamfesting), DXCC card checking and much more. Check out the web site for more details. http://www.fortwaynehamfest.com/
It is a long (and boring if you are alone) drive from Indianapolis. I recommend going with a friend or acquaintance. Perhaps posting here to see if anyone is interested in carpooling.
Also, I believe the Indianapolis Radio Club usually rents a bus to go as a group. (I am sure they do for Dayton, but maybe not to Ft. Wayne.) You should be able to find their web site listed in the "links" section of the IndyHamRadio site.
If you have never been, I certainly recommend that you go at least once and check it out. I think you will likely find it a lot of fun. One of the bad things is that the ARRL SS contest is that same weekend most years, this year included. Argh! Life is hard!! :)

73,
Don, W9DEW

Fort Wayne Hamfest and Computer Expo
Indiana State A.R.R.L. Convention
Indiana Repeater Council Meeting
November 18 - 19, 2006, Fort Wayne, Indiana

The 34th Annual Fort Wayne Hamfest & Computer Expo and Indiana State A.R.R.L. Convention, sponsored by the Allen County Amateur Radio Technical Society (AC-ARTS), will be held at the Allen County War Memorial Coliseum at the corner of Indiana 930 (Coliseum Blvd) and Parnell Ave. Open to the public 9:00 A.M. - 4:00 P.M. EST on Saturday and 9:00 A.M. - 3:00 P.M. EST on Sunday. Vendor setup is Friday evening and Saturday morning. Admission is only $6.00 (good for both days) at the door only, 11 and under are free with adult. Parking is $4.00. There are over 900 commercial and flea market tables (133,000 sq. ft.), all under one roof, containing both new and used radio, computer, and general electronics items. Vendors include several International ham equipment manufacturers. Activities will include many forums and meetings, and VE testing on Saturday. Talk-in on 146.88(-). For more information leave a message on the answering machine at (260) 450-4869 and you will be contacted. You can also send an SASE to AC-ARTS / Fort Wayne Hamfest, P.O. Box 10342, Fort Wayne, Indiana 46851-0342, or visit our World Wide Web site at <http://www.fortwaynehamfest.com>.

491. Comet CHA250B vertical

Yahoo group: IndyHamRadio
Date: 2006-10-22 22:44:10 UTC
From: Ken Bandy
Topic: 491 Message: 491

I recently have gotten the itch for a vertical HF antenna. I have read about the Comet CHA250B. This antenna claims to not need radials, and is good from 6m to 80m, without the need for a tuner.

I am skeptical of the antenna after reading reviews about it on eHam.net. They run either hot or cold, folks seem to love it or hate it. It's a little pricey at $369, but if it works, I would be willing to go for it.

Anyone have any experience with this antenna? Or are there other recomendations out there?

Thanks in advance.

From: w9fg
Topic: 491 Message: 493

Hello Ken,

After a 16 year absence from ham radio, I recently got back engaged. Years ago, I had quads and monobander type beams. I still have a 72 foot crank over tower, except it is in pieces and storage. I live in a residential area on a lot with quite a few of trees. I have not quite figured out how to put the tower up. Also I have not figured out how to put up a dipole.

I purchased a Hygain AV-640 8 band no radials required vertical. 40 - 6 meters. I have always thought verticals radiated poorly in all directions. I have been pleasantly surprised to its performance. I enjoy chasing DX and even with the poor conditions I have racked up quite a total, and added to my overall country list. I may not be the loudest in the pile ups, but I have busted a few first. I am running 1KW. Now the downside. I do believe the receive signal is not as good as a beam or quad. But if I can hear them I usually can work them. I have not worked enough stateside to understand local skip and distance. I need Kentucky on 20 meters for WAS on 20, Never hear one, must be too close.

All in all I am pleasantly pleased to the performance. The power I am running helps, although I have made several contacts bare foot. Majority of my contacts are SSB, some RTTY and SlowScan TV.

Mine is ground mounted, the base up 10 feet. Very good SWR. Have not been through a wind storm. Would I do it again? Sure.

Hope my experience helps your decision, Beats not being on the air.

73 and gud DX, Dick

Thanks Dick. I currently use a Windom barefoot, and have been having a blast with it. I have a 10-15-20 meter beam that I plan on putting up at some point, after I get a tower for it. I was wondering about the vertical to go on an existing tower that I have. This existing tower is close to the house, so ground radials would be tricky, that's why I'm looking at the "no radial" versions. I'll devote some more thought and research into it.

Thanks again.

495. Comet CHA250B vertical (snake oil)

Yahoo group: IndyHamRadio
Date: 2006-10-23 07:42:49 UTC
From: n9wb
Topic: 495 Message: 495

Ken:
About the CHA-250 B:

1.6 to one or better SWR 3 to 57 MHz.
No ground radials!
No Tuning!

Seems too good to be true. Well, it is too good to be true.
This antenna falls into the category of antennas I called Enhanced Dummy Loads. I don't call them that just because they are poor radiators, I call them that because they are actually a resistive dummy load! This design is snake oil. Don't be fooled by advertising and number spinning.

In order to get this type of a match, a considerable amount of your power is burned up as heat in a resistive load inside of the antenna. How much, depends on the band that you are on. Other antennas that fall into this category are the B&W broadband dipole and a device called the Magicom. The ARRL refused to advertise the Magicom in QST.

Unfortunately, I have seen a recent resurgence of these antennas on the market in the last couple of years.

So when you see an antenna that covers a very wide range of frequencies with a low SWR and no traps or coils and no tuning required, suspect it of being of the Enhanced Dummy Load type.

Not all antennas that do not require ground radials or a counterpoise ground are of the above type. However, even the legitimate groundless antennas are a compromise. Generally speaking a groundless antenna that is truly an antenna, will have the same performance of a antenna that uses a ground that is half it's length. This is because with groundless antennas 1/2 of the antenna electrically serves as a ground. Even though it is end fed, a groundless antenna can be thought of as a vertical dipole fed in the center.

So when choosing a vertical, a lot depends on where you plan to mount it. Of course, one of the best ground mounted verticals is the Hy Tower because it is 1/4 wave on 80 meters. It is around 50 ft tall. Of the shorter variety, I have always liked the Butternut. It is not real good on 80 meters, but a shortened vertical will not be. But on 40 meters and above in frequency, it does very well if used with a proper ground, ground radial system, or counterpoise ground.

A ham in 4 land just put up a butternut on the steel roof that covered a lap pool. The roof was 15 ft wide and I think 50 ft long. The roof acts as a counterpoise ground and it gets out well. Kind of like a 1/4 wave whip for 2 meters mounted on the car roof.

Some of the antennas that require a ground can work with a network of spoke like radials that the manufactures provide. This is not as good as full size radials, But allows the antenna to be elevated. A non resonant counterpoise is most important near the connection point to the antenna and it's effectiveness reduces as the distance from the antenna connection point increases. So theoretically, a vertical mounted on a circle with a radius of 32' will be better on 40 meters than one mounted on a metal circle of 10' radius but the performance by using the 10 ft counterpoise will not be reduced as much as one might think. And a vertical 40 ft in the air with a 10' radius counterpoise will probably do better than a ground mounted one with a 32 ft. counterpoise. As the frequency increases, the 10 ft radius counterpoise becomes very efficient because it becomes a higher percentage of 1/4 wave radius. With a non resonant counterpoise, the number of radials is more important then their length to a degree.

One vertical antenna that I would recommend is the Butternut HF9V. There are other good antennas out there.

Stay entirely away from Dummy Load Antennas. Use groundless antennas only where the convenience outweighs the reduced performance.

For using a Butternut on a tower:

277-26 Model CPK Counterpoise Kit
for HF6V and HF9V. Use where radials are not possible. Offers a simulated ground to replace radials. Four 5-1/2 ft rigid counterpoise tubes form a square measuring 8 ft 3 in on a side. Should be used at least 7 ft high for personal safety. Ship weight: 9 lb (4.1 kg)

Thanks Dick. I currently use a Windom barefoot, and have been having a blast with it. I have a 10-15-20 meter beam that I plan on putting up at some point, after I get a tower for it. I was wondering about the vertical to go on an existing tower that I have. This existing tower is close to the house, so ground radials would be tricky, that's why I'm looking at the "no radial" versions. I'll devote some more thought and research into it.

Thanks again.

Ken

Subject: Re: [IndyHamRadio] Comet CHA250B vertical

Hello Ken,

After a 16 year absence from ham radio, I recently got back engaged. Years ago, I had quads and monobander type beams. I still have a 72 foot crank over tower, except it is in pieces and storage. I live in a residential area on a lot with quite a few of trees. I have not quite figured out how to put the tower up. Also I have not figured out how to put up a dipole.

I purchased a Hygain AV-640 8 band no radials required vertical. 40 - 6 meters. I have always thought verticals radiated poorly in all directions. I have been pleasantly surprised to its performance. I enjoy chasing DX and even with the poor conditions I have racked up quite a total, and added to my overall country list. I may not be the loudest in the pile ups, but I have busted a few first. I am running 1KW. Now the downside. I do believe the receive signal is not as good as a beam or quad. But if I can hear them I usually can work them. I have not worked enough stateside to understand local skip and distance. I need Kentucky on 20 meters for WAS on 20, Never hear one, must be too close.

All in all I am pleasantly pleased to the performance. The power I am running helps, although I have made several contacts bare foot. Majority of my contacts are SSB, some RTTY and SlowScan TV.

Mine is ground mounted, the base up 10 feet. Very good SWR. Have not been through a wind storm. Would I do it again? Sure.

Hope my experience helps your decision, Beats not being on the air.

73 and gud DX, Dick

Subject: [IndyHamRadio] Comet CHA250B vertical

I recently have gotten the itch for a vertical HF antenna. I have read about the Comet CHA250B. This antenna claims to not need radials, and is good from 6m to 80m, without the need for a tuner.

I am skeptical of the antenna after reading reviews about it on eHam.net. They run either hot or cold, folks seem to love it or hate it. It's a little pricey at $369, but if it works, I would be willing to go for it.

Anyone have any experience with this antenna? Or are there other recomendations out there?

Thanks in advance.

Ken

Ken, I would have to agree with Walt. If it sounds too good to be true, it usually is. One of my favorite antennas is a dipole cut for the lowest band that fits your property (or close) and fed with 450 ohm ladder line. They do require an outboard tuner (transmatch) and they are a high swr antenna, but with the ladder line, you don't have the loss you have with coax. I have heard hams say the feedline will radiate, and you will have RFI in your shack. I've ran up to 500 watts without any problems. The key is to make both sides of the dipole as close to the same. Balanced feedline, balanced antenna. I would like to try one with the 600 ohm feedline as they say rain doesn't affect it as much. With the usual 450 "ladder" line you see at hamfest, when they get wet, your tuner adjustments usually change. The makers of the 600 ohm say it is not as effected by rain.

As far as a vertical goes, I don't have much experience except that I did use a 14AVQ as a novice. No 80 meters, but on shortened verticals, you won't see much bandwidth. That can probably be cured with a good tuner. Over the years, I have worked a lot of guys using the Butternut vertical, and if you needed to use it on all bands, that is probably a good choice. I've never used a multiband vertical like that mounted off the ground, because I think you can run into some challenges because I believe the radials need to be the right length. It would probably help to have them the right length on ground mounted, but I don't think it's as critical. I've put up a couple of inverted L's for 160 and put down as many radials I could on my small lot, but no way they were close to 1/4 wave for 160. I'm sure it wasn't ideal, but it didn't do bad either. With the antenna ground mounted, you just do as good as you can and it will work. The more the better of course, but on a 50x130 lot you just do the best you can. Sorry for rambling on...hi

73, Mike K9MI

Topic: 491 Message: 501

Ken,

This is not the first antenna to claim to not need radials and still put out a good signal, I have not used one myself, but had an R7000 for several years that claimed the same thing.

It did work better than the indoor antennas I had used up to that point but was still lacking.

For myself, I graduated to a HyTower AV18 HT vertical which does need to have radials but has preformed well beyound what I would have expcted.

HyGain now sells a smaller vertical built on the same design comcepts of the AV 18 HT, it is still in the $350. area for price but I believe it would outperform the Comet.

http://www.eham.net/reviews/detail/5472

If they could come up with a vertical that worked as good without radials as one that did, I doubt anyone would be selling verticals that required radials.

While the radials are a chore to install, once you have them in place, it is hard to beat the performance compaired to a vertical without.

I also noted the R7000 also seemed to bark a bit better after I added radials to my location.

I could be totally wrong however.

Ken,

I looked at the specs on the Comet CHA250B & noticed that the power rating is only 250W max.

I have the Gap TitanDX (no radials required), which covers 80m-10m (including thw WARC bands) and allows the full legal limit. The TitanDX is in the same price range as the CHA250B. Although not spec'ed for 6m operation, my SWR is 1.25:1 on 6m & I have made several contacts with it, both ground-wave & skip.

I have used the GAP extensively in the 18 months I have had it. I have worked over 60 countries on 40m with it and several more on 20m & 15m (including Peter I last winter). I have a 160m off-center fed dipole that I use on 75m, so my experience with the TitanDX on that band is limited. At on;y 25' tall, the TitanDX is definitely a compromise on 75m, but performs quite well on the higher bands. Is it as good as a quad or a monobander? Of course not. But for limited space, all-band coverage, it will be hard to beat.

503. RE: [IndyHamRadio] Comet CHA250B vertical

Yahoo group: IndyHamRadio
Date: 2006-10-24 17:54:15 UTC
From: Ray Andrews
Topic: 491 Message: 503

Ken,

Look at the Gap TitanDX. Several of us here in the Terre Haute area are using them. It covers 80m-10m & works on 6m (SWR <1.5:1), although not advertised for 6. Like any shortened antenna, it is a compromise, but mine has worked well for 18 months or so, including over 60 countries on 40m. Also, The TitanDX allows full legal limit power.

Its design is a shortened vertical dipole, overall length 25'. The bandwidth is pretty narrow on 80m (50kHz) and barely adequate on 40m, but covers all of each of the other bands. My home-brew 160m Windom works better on 80m than the Gap, but the Gap is equal or better than the Windom on the higher bands.

Although it requires no radials, there is a counterpoise wire, formed into a square loop, at the bottom of the antenna. The diagonals of the square are 84". The counterpoise is only used on 40m & you tune the antenna on 40m by adjusting the length of the wire.On 80m, you "tune" the antenna by changing out a fixed capacitor at the top of the antenna ($12 each from Gap). There is no tuning required for the other bands.

Sounds good, Ray. I'll check out the TitanDX. I've got a homebrew 80m Windom that I have worked a lot of DX with, barefoot, so the vertical would be another option.

Also, thanks again for the QSO on the TH repeater this afternoon on my way from Terre Haute to Indy.

73,
Ken

505. Gap Titan DX

Yahoo group: IndyHamRadio
Date: 2006-10-25 10:15:10 UTC
From: n9wb
Topic: 505 Message: 505

I just looked over the manual and pictures of the GAP Titan DX.
Please note, I have never used one, but just looked it over.
Very interesting antenna design.

Something that I failed to mention in a previous post is that when a properly designed groundless antenna is 1/2 wave or more in length on a particular band, the deficiencies I mentioned in a groundless antenna do not apply. Please note that I am not talking about the Dummy load antennas with a resistive match.

So on bands that the length approaches 1/2 wavelength, the efficiency will approach or equal that of a vertical dipole which is acceptable.

Gain on H.F.:

With the exception of beam type antennas such as Yagis or Quads, gain beyond unity is of little concern. We are more concerned with radiation angle, and one reason for using a vertical is that it is a low angle radiator, good for DX. Gain figures of 6 or 10 dB cannot be realized on H.F. with practical lengths.

If you want more power, use an amplifier. Some will balk at this statement, but look at the numbers. If you run 100 watts and get 3 dB gain you will have an ERP of 200 w. If you run a unity gain antenna and use a 1 KW amp you will gain 10 dB.

But some say, "You can't work them if you can't hear them". Again excepting beams such as Yagi or Quad antennas, on H.F. bands, when a signal becomes unreadable, it drops below the QRM/N. Gain alone, be it an antenna or pre amp will not help this with modern receivers. Now I do not dispute that optimizing the radiation angle will improve receive of some stations.

From what I see, the GAP Titan appears to operate as a half wave vertical dipole. If this is correct, this a good design and allows the antenna to be easily elevated to lower the radiation angle even more for DX.

Ray mentioned that it was a bit narrow on 40 meters.

A possible modification might be to remove the wire, leaving the supports because they appear to serve as part of the antenna on some of the higher frequencies, and connect 2 or 3, radials that would be a bit like unwinding the wire. The length would differ from the wire length because of inductive and capacitive effects of the wire being wound in a square.

Again, I have not used this antenna or have I seen one in the flesh, but from what I saw in the manual, I would give this design a thumbs up, particularly for tower or roof mounting. I wonder how one would work on the roof of our 3 story EMA building. We need something for the frequencies above 40 meters.

Thank You guys for bringing this to my attention.

Vy 73, Walt N9WB

Walt,

I did some measurements on my Gap TitanDX using my MFJ analyzer. The 2:1 SWR bandwidth is 340 kHz, so forget what I said about the antenna being a bit narrow on 40m, I was working from my age-feebled memory in my previous post. The bandwidth on 80m is rather narrow as advertised. It is spec'd at 100 kHz & my antenna measures about 2.5:1 over a 100 kHz range. Although advertised for 80m-10m, its performance will get you on the air on 80m, but just barely. On the rest of the bands, it performs admirably.

As for mounting it on top of your EMA building, it would be ideal for that application. We have one mounted on top of the 2-story Ryves Hall Youth Center here in Terre Haute & it works great.

510. D-STAR Presentation, Friday, 11/10 @ 7:30 pm, Lake County ARC, Merrillville, IN

Yahoo group: IndyHamRadio
Date: 2006-11-03 13:47:34 UTC
From: Mark Thompson
Topic: 510 Message: 510

The November 10th Lake County Amateur Radio Club meeting will feature a presentation on D-STAR by Mark Thompson, WB9QZB.

D-STAR is a digital protocol developed by the Japanese government and Japanese Amateur Radio League. Icom is the first manufacturer to manufacture D-STAR-compatible radios, although the protocol is open to anyone.

D-STAR enables simultaneous digital voice and data transmission. At present, digital voice can be sent on 144, 440 & 1.2 GHz (4800 bps) concurrently with low speed asynchronous data (950 bps) in a narrow 6.25 KHz channel. High speed data (128 kbps) can be sent concurrently using TCP/IP on 1.2 GHz in a 130 KHz channel.

D-STAR repeaters are connected via the Internet, which enables worldwide connections across the D-STAR network. Imagine having a broadband Internet connection via your mobile rig.

Among the many possible applications, D-STAR promises enhanced emergency communication handling - the efficiency of simultaneous voice and data communications, as well as graphic and other large file transfers that are difficult or impossible with current packet technology.

Mark, WB9QZB, will present the D-STAR system in detail, with an update on Icom technology, the radios currently available that support D-STAR, and what is in development. Mark has been actively involved for many years in local packet and digital radio activities, and has been featured on Hap Holly's RAIN Report.

Please join us for an informative and entertaining evening, Friday, November 10th at 7:30 pm. Club meetings are held on the second Friday of every month at 7:30 p.m. at the Westwind Manor/Lake County Government Complex Lake County Emergency Management Agency Conference Room (First Floor), 2900 93rd Avenue, Merrillville, IN. 46410
Come spend a Friday evening with us.

If you can't make the meeting visit the Illinois Digital Ham Yahoo Group for more information about D-STAR:

http://groups.com/yahoo.com/group/illinoisdigitalham/

PLEASE PASS THIS ANNOUNCEMENT ON TO OTHER CLUBS & HAMS WHO MIGHT BE INTERESTED.

511. Fw: [illinoisdigitalham] 21st Annual Southwest Ohio Digital and Technical Symposium

21st Annual Southwest Ohio Digital and Technical Symposium

In cooperation with Dial Radio Club; Miami University, Middletown and the ARRL, the 21st Southwest Ohio Digital and Technical Symposium will be held on Saturday January 13, 2007. The venue will once again be in Thesken Hall of the Middletown campus of Miami University. Registration will begin at 8:00 AM, with presentations running from 9:00 AM until approximately 4:30 PM.

As this is being written we have commitments for the following presentations:

* D-Star, Mark Thompson, WB9QZB
* WinLink 2K, Greg Zach, WG8Z
*A PSK-31 Audio Beacon Project, Jim Everly, K8IKE
* Using a Wide Band Noise Generator, Jay Slough, K4ZLE
* The SoftRock Software Defined Radio Project, Tony Parks, KB9YIG

Other potential presentations are in the wings, such as an AMSAT update, a microwave communications demonstration and more. As you can see, this year's program should be very informative with topics that are state of the art and have immediate real world application. Come meet the folks who are making things happen technically in our hobby, both locally and nationally.

There is no charge for attending the symposium. A box lunch will be available on site. Directions to the campus in Middletown, Ohio can be found on the website: http://www.swohdigi.org. Updates to the program will also be posted on the website. For further information, you may contact Jay Slough, K4ZLE at arrl.net

Brian,

Please give me a straight answer. Ok? If I send you a $5 bill (cash), would you furnish the CD, postage and etc? In other words if I send more than the cash to cover your cost will you send me the Code Course? The reason I am asking is that my intentions have been to get this stuff together all along, but have not done so. If I could put the bill in an envelope and mail it, that I could easily do.

Hey all,

Just a reminder about the FREE CD CW Code Course I have been sending out...

All you have to do is send me a self addressed, postage paid, return CD mailer with a blank CD in it. I will burn the Code Course and send it back.

Please NOTE...POSTAGE IS TYPICALLY 87 CENTS both ways. This covers something weighing 3oz. If it is betwen 3 and 4 oz you need to add another 24c to the postage both ways.

If I get anymore postage due disks, I will have to just tell the PO to send it back to you, empty. Sorry if I sound like a crab, I'm out about $5 in postage now and that's three beers and a hot dog at the bowling alley.

Jim

That's a GREAT link. Thanks for posting it here.

This is the same CW Course I hand out on CD ROM...everyone can save themselves the trouble of mailing me for it, by just going there and downloading it. Very nice.

527. Indiana's 1st D-STAR Repeater to be Announced Saturday at Ft. Wayne Hamfest

Yahoo group: IndyHamRadio
Date: 2006-11-16 00:15:40 UTC
From: Mark Thompson
Topic: 527 Message: 527

Indiana's first D-STAR repeater in Indianapolis will be announced on Saturday at the D-STAR forum at the Ft. Wayne hamfest.

The repeater owner will be at the forum and we look forward to seeing you. Details about the forum are in the attached email below.

73, Mark, WB9QZB
Chicago, IL

http://groups.com/yahoo.com/group/illinoisdigitalham/

----- Forwarded Message ----

Sent: Thursday, November 9, 2006 3:52:50 PM
Subject: D-STAR Presentation, Saturday, 11/17 @ 2:15 pm, Fort Wayne Hamfest (Red Forum Room)

The Fort Wayne Hamfest will feature a presentation on D-STAR by Mark Thompson, WB9QZB on Saturday, November 18th at 2:15 pm in the Red Forum room.

D-STAR is a digital protocol developed by the Japanese government and Japanese Amateur Radio League. Icom is the first manufacturer to manufacture D-STAR-compatible radios, although the protocol is open to anyone.

D-STAR enables simultaneous digital voice and data transmission. At present, digital voice can be sent on 144, 440 & 1.2 GHz (4800 bps) concurrently with low speed asynchronous data (950 bps) in a narrow 6.25 KHz channel. High speed data (128 kbps) can be sent concurrently using TCP/IP on 1.2 GHz in a 130 KHz channel.

D-STAR repeaters are connected via the Internet, which enables worldwide connections across the D-STAR network. Imagine having a broadband Internet connection via your mobile rig.

Among the many possible applications, D-STAR promises enhanced emergency communication handling - the efficiency of simultaneous voice and data communications, as well as graphic and other large file transfers that are difficult or impossible with current packet technology.

Mark, WB9QZB, will present the D-STAR system in detail, with an update on Icom technology, the radios currently available that support D-STAR, and what is in development. Mark has been actively involved for many years in local packet and digital radio activities,

and has been featured on Hap Holly's RAIN Report.

Please join us for an informative and entertaining presentation on Saturday, November 17th at 2:15 pm at the Fort Wayne Hamfest. The hamfest is at the Allen County War Memorial Coliseum and Exposition Center, located at 4000 Parnell Avenue in Fort Wayne.

A free Icom hat will be available to those who attend the forum. Come early. Supplies are limited.

If you can't make the presentation visit the Illinois Digital Ham Yahoo Group for more information about D-STAR:

http://groups.com/yahoo.com/group/illinoisdigitalham/

PLEASE PASS THIS ANNOUNCEMENT ON TO OTHER CLUBS & HAMS WHO MIGHT BE INTERESTED.

Hoosier Hams,
In case you missed it elsewhere, the FCC promulgated (published)
the "Omnibus" Report and Ordered today which means that it will take
effect December 15 of this year.
The details are available at:
http://www.arrl.org/news/stories/2006/11/15/100/?nc=1
<http://www.arrl.org/news/stories/2006/11/15/100/?nc=1>

The ARRL has also updated their band chart and a copy is available
at:

http://www.arrl.org/announce/regulatory/wt04-140/Hambands3_color.pdf
<http://www.arrl.org/announce/regulatory/wt04-140/Hambands3_color.pdf>

Good Hamming,

Don, W9DEW

530. Indiana D-STAR Update

Yahoo group: IndyHamRadio
Date: 2006-11-19 18:11:59 UTC
From: Mark Thompson
Topic: 530 Message: 530

D-STAR Enthusiasts in Indiana -

The D-STAR forum at the Fort Wayne hamfest was well attended yesterday, Saturday. In fact, it was standing room only with nearly 70 in attendance. After the presentation an extensive set of literature about D-STAR was made available to everyone who wanted it as were free Icom hats.

Dale, WB9YCZ from Indianapolis brought his new 440 D-STAR repeater to the hamfest and had it running out in his vehicle in the parking lot so we used the repeater with our Icom 91AD D-STAR HTs instead of simplex. Dale introduced his new repeater at the forum and it will be located on the northwest side of Indianapolis at 700 feet.

I would like to thank Gene, K2KJI of KJI Electronics for bringing a full complement of D-STAR HTs, mobiles and even repeaters to the hamfest. I know some hams got on D-STAR for the first time at the hamfest because Gene brought D-STAR equipment to the fest. His store can be reached at: www.kjielectronics.com

If you missed the D-STAR forum at the hamfest you can find out more information about D-STAR at the Digital Ham group at the link below. We know have over 400 members on the group and look forward to your participation.

On Saturday, January 13th I plan to present a D-STAR introduction / overview at the Southwest Ohio Digital Conference at the Middletown Campus of Miami University, Middletown, Ohio. More information about the forum is at: http://www.swohdigi.org/

Happy Holidays and look forward to seeing you on D-STAR.

532. Re: [illinoisdigitalham] Central Indiana D-STAR Activity

Yahoo group: IndyHamRadio
Date: 2006-11-23 15:24:20 UTC
From: Mark Thompson
Topic: 532 Message: 532

Hank -

In many areas of the U.S., including the Chicago area, 145.67 is being used as a common simplex D-STAR frequency. If that frequency isn't being used for other purposes in your area perhaps you may want to monitor that frequency until a repeater is brought up.

As you probably know, Indianapolis now has a D-STAR repeater, W9ICE on 443.900.

I just added a photo album, good pictures of the original W1FB (SK) Tuna Tin transmitter. I had the honor and pleasure of using it at Four Days in May in 2001 along with Diz W8DIZ. We used the W8DIZ Multipig rig for the receive and the TT as the transmitter...about 200 mw and I worked W6TOY on the east coast. Bruce (W6TOY SK) is the ham that restored the TT after it was found in a flea market on the east coast. The TT is widely regarded as a QRP Icon from Doug DeMaw, the Holy Grail of QRP if you will. If I remember, I worked 13 stations that night, and sent them all a special QSL card for the QSO.

Brian,

I read your e-mail with some interest.....I had no idea that the Tuna Tin transmitter had ever been lost.....and to have it turn up at a flea market junk box! That had to be really neat to operate something that Demaw had actually built with his own hands. I think my ham hero is Bill Orr, W6SAI (SK). That guy was like Demaw, and wrote about lots of different facets of ham radio.

BTW, on something completely different......does anyone want to buy a Kenwood TS-820S with accessories (external VFO, matching speaker and mic). The Kenwood took a static hit....it still works, but the display is off, and the frequency might be as well. I'll take $275 for the rig and etc. It's all in really good cosmetic condition. Anyone who's interested, just contact me off list, or leave a message on the answering machine.

Brian....you're right, the list is eerily quiet.

73,

Alex - AA9XY

From: Ivin
Topic: 539 Message: 539

I am selling my Ten Tec Scout 555 with the mic, power cord, and copy of the manual, and 80/40/30 meter modules.

The case has some scratches, the Ten Tec mic has what looks like a solder burn on the corner. The face is clean and it works as it should. Full output power is 50 watts. I have had very good reports with this rig and would consider it in good condition.

I purchased this radio used, but it comes from a non-smoking environment.

Asking $275.00 and will ship within the United States for free.

Topic: 537 Message: 540

Yup...somehow the original Tuna Tin was removed from ARRL lab. It was suspected an employee had borrowed it to try out at home, and never returned it. Several years later, Ed Hare (W1RFI) was contacted by a ham in (I think) New Jersey stating that he had found it at a hamfest and wanted to give it back to the ARRL.

The rig is famous and has been on the cover of QST twice that I know if. Ed Hare made immediate arrangements to secure the Holy Grail of QRP. When he got it, it was in pretty beat up shape, Bruce (W6TOY SK) Muscalino volunteered to restore it with exact matching parts. I do not know the extent of the damage but Bruce did a great job because it matched the picture on the QST cover.

Anwyay, Ed is the manager of the ARRL lab, and he brought it with him to Four Days in May to show off as part of his QRP Forum at the Dayton Hamfest. Diz and I were in the audience and we were chatting with Ed after the forum and he asked us if we'd like to borrow the rig and try operating it from the hotel...I JUST ABOUT DIED.

I think we had ops on that rig ALL night long. It was very cool...and my best QSO was with none other than W6TOY.

Probably one of my best ham radio memories to date.

Topic: 542 Message: 542

Indiana Hams,
At the present time, there is an X-Class Flare and a geomagnetic storm in progress.

This forcast is from the Space Weather Support page at:

http://www.spacew.com/

Updated: 02:00 UTC 07 December:

"There is a chance for some mid-latitude sightings of auroral activity during the next 24 hours. However, the current full phase of the moon will make such observations difficult. A more significant chance of wider-spread auroral activity will be possible later this week and into next week as effects from recent major solar flare activity begin to arrive at the Earth. Impacts should commence on 8 December (from the first major limb flare on 5 December). A stronger impact is expected from the last major X-class flare of 6 December. That impact is currently (on a preliminary analysis) expected during the early to mid-UTC hours of 9 December. Arrival estimates may be less accurate due to the temporary loss of the SOHO LASCO cameras, which are used to help derive coronal mass ejection velocities.

MAJOR SOLAR FLARE

Multiple major solar flares continue to pump out from Region 930, which is proving to be quite a powerful active region. The last solar flare, a class X6.5/3B event, was associated with an impressive (and rare) Moreton Wave, which was visible racing across the face of the Sun in the light of H-alpha during and following this event. A strong delta configuration exists in this region together with strong levels of magnetic shear. As a result, energetic solar flaring is likely to continue through at least the near-term. "

My propagation software says that 30, 40, 60 and 80 meters should be open to most of the dark side of the world at the moment. If you are interested in HF propogation, it may be wise to monitor some of the solar sites for the next few days.

73 and good DX,
Don, W9DEW

Hi Chris,
To my knowledge, there is not much activity on packet in Indiana at the moment other than APRS and the DX Clusters. I can give you the Indianapolis DX Cluster frequencies, but that won't do you much good in Evansville. If you do find some activity, please let me know. I enjoyed packet quite a bit.

553. FCC Eliminates Morse Code Requirement (Finally!!)

Yahoo group: IndyHamRadio
Date: 2006-12-16 02:27:19 UTC
From: Mark Thompson
Topic: 553 Message: 553

FOR IMMEDIATE RELEASE: NEWS MEDIA CONTACT:
December 15, 2006 Chelsea Fallon: (202) 418-7991

FCC MODIFIES AMATEUR RADIO SERVICE RULES,
ELIMINATING MORSE CODE EXAM REQUIREMENTS AND
ADDRESSING ARRL PETITION FOR RECONSIDERATION

Washington, D.C. – Today, the Federal Communications Commission (FCC) adopted a Report and Order and Order on Reconsideration (Order) that modifies the rules for the Amateur Radio Service by revising the examination requirements for obtaining a General Class or Amateur Extra Class amateur radio operator license and revising the operating privileges for Technician Class licensees. In addition, the Order resolves a petition filed by the American Radio Relay League, Inc. (ARRL) for partial reconsideration of an FCC Order on amateur service rules released on October 10, 2006.

The current amateur service operator license structure contains three classes of amateur radio operator licenses: Technician Class, General Class, and Amateur Extra Class. General Class and Amateur Extra Class licensees are permitted to operate in Amateur bands below 30 MHz, while the introductory Technician Class licensees are only permitted to operate in bands above 30 MHz. Prior to today's action, the FCC, in accordance with international radio regulations, required applicants for General Class and Amateur Extra Class operator licenses to pass a five words-per-minute Morse code examination.

Today's Order eliminates that requirement for General and Amateur Extra licensees. This change reflects revisions to international radio regulations made at the International Telecommunication Union's 2003 World Radio Conference (WRC-03), which authorized each country to determine whether to require that individuals demonstrate Morse code proficiency in order to qualify for an amateur radio license with transmitting privileges on frequencies below 30 MHz. This change eliminates an unnecessary regulatory burden that may discourage current amateur radio operators from advancing their skills and participating more fully in the benefits of amateur radio.

Today's Order also revises the operating privileges for Technician Class licensees by eliminating a disparity in the operating privileges for the Technician Class and Technician Plus Class licensees. Technician Class licensees are authorized operating privileges on all amateur frequencies above 30 MHz. The Technician Plus Class license, which is an operator license class that existed prior the FCC's simplification of the amateur license structure in 1999 and was grandfathered after that time, authorized operating privileges on all amateur frequencies above 30 MHz, as well as frequency segments in four HF bands (below 30 MHz) after the successful completion of a Morse code examination. With today's elimination of the Morse code exam requirements, the FCC concluded that the disparity between the operating privileges of Technician Class licensees and Technician Plus Class licensees should not be retained. Therefore, the FCC, in today's action, afforded Technician and Technician Plus licensees identical operating privileges.

Finally, today's Order resolved a petition filed by the ARRL for partial reconsideration of an FCC Order released on October 10, 2006 (FCC 06-149). In this Order, the FCC authorized amateur stations to transmit voice communications on additional frequencies in certain amateur service bands, including the 75 meter (m) band, which is authorized only for certain wideband voice and image communications. The ARRL argued that the 75 m band should not have been expanded below 3635 kHz, in order to protect automatically controlled digital stations operating in the 3620-3635 kHz portion of the 80 m band. The FCC concluded that these stations can be protected by providing alternate spectrum in the 3585-3600 kHz frequency segment.

Action by the Commission on December 15, 2006, by Report and Order and Order on Reconsideration. Chairman Martin and Commissioners Copps, Adelstein, Tate, and McDowell.

For additional information, contact William Cross at (202) 418-0691 or William.Cross@....
WT Docket Nos. 04-140 and 05-235.

554. CW - Opinion

Yahoo group: IndyHamRadio
Date: 2006-12-16 16:45:29 UTC
From: Don West
Topic: 554 Message: 554

Indiana Hams,
It is apparent that many of us are disappointed about the FCC's elimination of Morse Code proficiency as a requirement for a General class or higher license. I hate to see the requirement eliminated as well. Nevertheless, after the ITU eliminated the requirement at the 2003 World Radio Conference, it was no longer a matter of IF, but WHEN the requirement would be dropped here.
What effect will this have on the hobby? That depends on us and how we choose to respond. The end of CW as a licensing requirement does NOT mean the end of CW, that much is clear. CW will continue as long as there are Amateurs that use it and enjoy it.
What function did the CW licensing requirement serve? The real function that it served was one of a "commitment barrier". All groups have some form of "commitment barrier", such as dues, initiation rights, etc. that serve two functions.

1. They force us to put a "value" on membership. (Just like offspring do not "value" the car that was given to them as much as the one that they had to PAY for. The car may be worth the same, but we value it more when we have a personal "investment" in it.) More importantly, we are more likely to act responsibly to avoid losing something that we value than something that was free.

2. They deter people that are not "committed". The CW requirement was a form of "sweat equity" until now, we all had to pay in order to be admitted.

What this comes down to is that the "price of admission" to the hobby has been lowered, not eliminated, just reduced.

It seems to me that there are two upside opportunities here:

1. More people in the hobby means:
a. more use of the spectrum, more influence on government regulations, less chance of the spectrum being sold to the cell phone industry. (Which would be the likely outcome if we don't get more people in the hobby.)
b. more equipment sold, more innovations, more economy of scale and reduced prices, and reduced depreciation of old equipment.

2. The big opportunity before us now is the opportunity to mentor... What happens to this hobby now depends on how we treat the newcomers. If we choose to view them as "second class citizens", then that is likely what we will get. We will get a hobby divided into two groups, "Stodgy Old Timers" and "Disrespectful Brats".
Conversely, if we choose to welcome the newcomers and offer guidance and assistance showing that we value them, it is likely that they will value the hobby and the people in it.

The choice is ours.

73,
Don, W9DEW

555. Re: [IndyHamRadio] CW - Opinion

Topic: 554 Message: 555

ALL CONCERNED MY CW OPINION,

I too realize there will probably be many comments concerning the ups and downs on eliminating the CW requirement. Basically I am not disappointed but wished it had been done some time ago. I had a feeling the CW requirement was still in place for the wrong reason. The times are changing and guess we need to change with the times.

Now for me personally I like CW and could easily have passed 20 WPM as a Novice but just kept to myself using a straight key enjoying that class of ticket for a little over
a year. I had my turn in the barrel being net control for both QIN and the Indiana slow code net and trying to produce a newsletter a few years back. It sort of surprises me that operators speak favorably for CW but we could not get participants in the Hoosier CW nets? Here again I do not want to brag on my CW and know there are many operators out there who far surpass my capability of sending and receiving.

I still enjoy CW but not nearly as active now days. The primary part of my enjoyment was to get on the Novice band and either call or listen for a CQ with making random contacts. It had always amazed or surprised who would answer a call. I still belong to FISTS with my number being 5668. I am not a contester or DXer but just enjoy contacts and ragchews. If my memory serves correctly think my longest ragchew on CW was 4 hours and 20 mins. I have had several 3 hour ragchews on CW.

With all of that being said I have some concerns part of which has already taken place, that
is reduction of the basic CW windows. Realizing that CW was authorized about anywhere in the ham bands previously I wonder what the future will bring? Will further restrictions follow.

Otherwise I agree with many of the W9DEW comments concerning welcoming newcomers and those who upgrade. We cannot afford to view newcomers as second class citizens to the hobby and in reality we need them. I say we need them to become active and hope they participate in radio clubs and the many facets of our public service.

In my opinion I can only guess many groups are in the same boat as us here in Whitley County (Columbia City area). Many of our old timers do not participate in ham activity to include
being club members, support radio events or even help out with other amateur related tasks for
various reasons. Actually it often occurs even those who are newly licensed do not support the
grass roots of ham radio. Again there are numerous reasons. For my part in this scenario with
all of my activities it can be difficult to support some areas in this day and age. But I still enjoy

ham radio.

Probably one of the most discouraging scenes is the old timers primarily who are not from Indiana
that get on 3910 KHZ most evenings to interfere or harass the Indiana Traffic Net (ITN). Anyone
who listens to the diatribe of rude comments, swearing and vulgar that takes place. They choose
to jump in after the net has started with with all sorts of interference. Even a net control who asked
if we moved somewhere else in the band would they stop, the reply was no, we will follow and keep
harassing you and play our music etc. To be sure the FCC has shut some down, but a few remain.

Anyway sorry to keep rambling but thought I would throw my 2 cents in and hope we can find room
for one and all continuing to support amateur radio.

Don / KA9QWC

Interesting perspective, Don, though I think that passing Element 3 for the General license and especially Element 4 for the Extra license still demonstrates a certain level of commitment.

I have a four-year degree in a technical field, my day job is designing HVAC control systems, and I like tinkering with cars, radios, and computers. I feel like I'm a technically-oriented person. This morning, I went to one of the on-line ham radio testing web sites and took a stab at the General exam. I failed. For me to pass that test is going to require commitment in the form of studying the material.

Before you think that I'm going to try to memorize the answers and then go take the test, that's probably not the approach I'll take. I'm too old to try to memorize that much material. Before I took the Technician test (16 years ago), I went through the entire question pool and answered every question to the best of my ability. I then graded my answers against the published correct answers. For every question that I answered incorrectly, I went back to the appropriate section of the license manual to study and understand the answer. After that exercise, passing the test was a breeze.

Your message goes on to state that you see the FCC's R&O as a reduction, not elimination, of the commitment required to get a higher grade of license. I agree 100%. I won't make any comments about the value of CW proficiency--that argument is behind us now. Getting an amateur radio license and, beyond that, actually getting involved in amateur radio will still require a commitment. It's not a no-brainer like the GMRS license or a gimme like Citizens Band. Prospective amateur radio operators will still have to make some effort to get a license.

As for me, I don't know that I will grab a microphone and start yakking away on SSB after I upgrade. For one thing, I can't put up much of, if any, an effective antenna at my residence. On the other hand, setting up in park with a portable antenna, a mobile HF radio running from a battery, and a laptop computer to do some PSK31 does have its appeal.

Bob...

Hi Don,

Very well put....I really like the high road and positive outlook for the future you've concluded your remarks with.

I'll admit to being one of the undesirables who oppose CW for licensing....not in any malicous way, I've just thought that the nature of things has changed so much that now's the time.

You're absolutely correct....CW will not disappear. Just look at the interest here in Indy with QRP CW....neat stuff.

I think we all agree that much more of an issue with CW/no CW is civility on the bands, and making them attractive once again to new amateurs. More than a few frequencies on HF are a real mess every single day. That will be our biggest challenge going forward.....demanding a return to standards of decency on the bands, in spite of our rude society as a whole. I fly internationally, and I can say without question that we live in the rudest, most selfish society on the planet, and that's sad because we're so blessed in so many ways.

Good news is that the group here locally seems great and I really enjoy reading your posts here. I hope to meet you guys some time soon! That campout sounded like a blast, but unfortunately, I was away.

Best 73 to all, Merry Christmas.

Brad

From: Brian - KB9BVN
Topic: 558 Message: 558

INARRL BULLETIN 004-2006
04:43PM EST 12/18/2006 de KB9BVN

ATTENTION

Immediately as of this date, December 18, 2006, we will move the Indiana Section CW Traffic Net, QIN to a new frequency of 3535 kHz, plus or minus QRM, and change the time our early session of cycle 4 to meet at 0000z instead of previous 3565 kHz at 0000z/0100z which may have conflicted with other nets and thus now, hopefully improve the band conditions for our net.

Also, we will schedule the 1430z, QIN session from the previous 3565 kHz to the new frequency of 3535 kHz

Thank you,
K9PUI Co-manager QIN

From: Brian - KB9BVN
Topic: 561 Message: 561

Does anyone know if the Indiana Sloppy Code Net is still operating?

The last info I had was it met on Sunday nights, at 9PM on 7140.5 Khz

Net Control is Henry Goulet KA9ZNN out of New Haven IN.

If you have any info on this net, please let me know.

Thanks es 73 de KB9BVN

From: Brian - KB9BVN
Topic: 563 Message: 563

On BBC4 there is a radio program available now called "Alpha Bravo Yankee Zulu" and it is an interesting story of how the phonetic alphabet for radio communications came about.

You will need to have Real Player installed.

73

Go to http://www.bbc.co.uk/radio4/

Click on "Listen Again" and look for "Alpha Bravo Yankee Zulu"

03:00PM EST 12/24/2006 de KB9BVN

2007 ARRL Straight Key Night

Regardless of your position, the important fact for CW enthusiasts is that the NPRM doesn't mean you won't be able to use the code if you choose. Radio communications have evolved a long way from the early spark-gap transmitters and their hand-created Morse code communications. Once in my life I would love to hear the electrical hissing of this unique ancestor of our current modern modes. It would be nice to see if you could really "smell" the signal in the air as "Old Betsy" (Hiram Percy Maxim's name for his spark-gap radio, which is on display at W1AW) or its cousins literally lit up the ether. But alas, as this particular mode is no long permitted, it will have to remain a perception challenge for the imagination

At the beginning of each year many operators around the US, and world-wide, declare a respite from the technological evolution. They turn back the pages of modern operation and look towards our roots in this hobby - ARRL Straight Key Night. Some consider CW antiquated while others view it an outdated technology. But for many - old-timer and newcomer alike - it is a reliable friend. (And if you think it is a technology that has been replaced by Blackberry and text-messaging technology, did you see the "Old Timers" - Chip Margelli, K7JA and Ken Miller, K6CTW - smoke the world champion fastest text messenger on the NBC Tonight Show with Jay Leno back on May 13th 2005?)

In this era of digital communication, keyboarding, FM and electronic keys, once a year many excellent operators bring the past to the present and participate in the annual ARRL Straight Key Night. The object of this friendly event is to enjoy some good, old fashioned QSO fun, using straight keys. The emphasis is on rag-chewing rather than fast contest-type exchanges. SKN 2007 begins at 7:00 p.m. EST December 31 and runs for 24 hours through 7:00 p.m. EST January 1 (0000 -2400 UTC January 1, 2007).

In many circles SKN has been expanded to encompass vintage radio equipment as well. Reminiscing about their early days in our hobby, many operators use SKN as the "excuse" to refurbish their old Viking, Heathkit, or Scout. You will hear as many vintage radios on the air during SKN as you will variety of keys. And you will hear signals generated using old-fashioned bugs, a variation of the straight key. SKN is the time amateur radio recalls the past, transporting it to the present.

When participating in SKN 2007, instead of sending RST before sending the signal report send the letters SKN, to indicate your participation, and to clue in passers-by who may be listening that SKN is going strong. After SKN, send the Contest Branch a list of stations worked, plus your vote for the

best fist you heard (it doesn't have to be one you worked). Also, include your vote for the most interesting QSO you had or monitored.

Don't forget to post your comments and interesting photographs from your SKN adventure to the ARRL Contest Online Soapbox at www.arrl.org/contests/soapbox Entries should be emailed to the Contest Branch at StraightKey@... or may be sent via regular mail to SKN, ARRL, 225 Main St, Newington, CT 06111. The Soapbox becomes an on-line album of stores and photographs to share with others.

Entries for SKN 2007 must be received by January 31, 2007. Votes for `Best Fist' and "Most Interesting QSO" will be tabulated and included in the April 2007 issue of QST. If you have questions about SKN, please visit the Contest Branch Web Page at http://www.arrl.org/contests or contact contests@...

The popularity and growth of last year's SKN continued. A record 349 entries were received for this annual New Year's Day operating event. To put this into perspective, we received only 80 entries SKN 1985 and 90 for SKN 2000. Why not dust off the key, clean the contacts and light up the ether with the beautiful melody of hand-created CW? Sweeter music is hard to find.

INARRL BULLETIN 06-2006
18:32 PM EST 12/25/2006

Broadcasting celebrates its centennial this December 29-30.

In 1906 Reginald Fessenden was experimenting with voices over radio, and his initial plan was to make a voice contact from Brant Rock, Massachusetts across the Atlantic to Machrihanish, Scotland. But a storm blew down the antenna at the Scottish site. Fessenden, in true ham spirit, went to "plan B." Instead of transmitting to Scotland, he used the Brant Rock station to transmit Christmas greetings to ships of the United Fruit Company. (More about this is at http://www.hello-radio.org/historyofradio.html).

This was the very first voice radio broadcast! The entire human experience changed when the ideas, cultures and events of the world were brought into living rooms in every town, no matter how remote.

On Dec. 29-30, 2006, ham radio operators will complete what Fessenden failed to do in 1906 and achieve Plan A with special event stations - and a LOT more.

A PROUD HISTORY OF TECHNOLOGY

Fessenden's broadcast started thousands of garage tinkerers playing with this new fangled thing called "radio." Amateur (often called "ham") Radio operators have been in the forefront of developing wireless technologies from the beginning and continue their role in exploring new designs and applications. Today hams use satellites, computers, software-defined radios, microwaves, Internet linked systems and technologies undreamed of in 1906. But it all started with the word "Hello".

There will be three primary special centennial event stations operating from 2000 GMT on Dec 29 to 2000 GMT on Dec 30 and hundreds of other ham radio stations around the world. Representing the past are W100BO/W1F at Brant Rock with Steve Barreres, K2CX, as team leader. GB1FVT will be at Machrihanish with Duncan MacArthur, GM3TNT, as team leader. Representing the future will be W1AW in Newington, CT.

Details and information is being posted to

www.hello-radio.org/event

SOUND BYTES and VIDEO AVAILABLE

Reenactments of the first transmissions, early ham radio promotions by Bob Hope, audio clips of astronauts speaking about and using ham radio, Walter Cronkite, and exciting emergency calls from Hurricane Katrina are available. B-roll video is also available for use if desired.

In addition to the site locations showing the past and future of radio, the transmission modes used will also reflect both traditional and emerging new technologies. The stations will be operating AM from the early 1900's, SSB and FM from the later 1900's, and Echolink/IRLP plus digital voice HF bringing in the digital communications of the 21st century.

INARRL BULLETIN 01-2007
19:39PM EST JAN 03 2007

World Scout Movement announces centenary of scouting ham radio award (Jan 3, 2007) -- The World Scout Bureau is sponsoring the "Scouting 100 Radio Award" for contacting Scout stations via Amateur Radio during 2007 -- the centenary of Scouting.

This international award is also available to short-wave listeners (SWLs). Stations may be worked/logged on all bands and modes including EchoLink and IRLP, and endorsements are available for special modes or bands, such as "All Satellite Contacts" or "All QRP Contacts."

Award activity will focus around the international Scout frequencies (in the Americas, use 7270 kHz as the 40-meter SSB frequency; on 80 meters, avoid RTTY/digital DX on 3590 kHz). Contact Scout and Guide stations for points: Ordinary Scout stations are one point, special event Scout stations are 2 points and World Jamboree, Gilwell Park and Brownsea Island stations are 5 points.

Logs should be verified as accurate by two other local radio amateurs. Logs should include name, Scout details and age of operator contacted. Female operators may send "YL" instead of age. Participants should submit age when applying for awards. Complete details are on the Scouting 100 Radio Award Web site.

573. SW Ohio Digital Symposium, Saturday, 1/13, 9 am - 4:30 pm

Yahoo group: IndyHamRadio
Date: 2007-01-04 19:10:31 UTC
From: Mark Thompson
Topic: 573 Message: 573

Digital Enthusiasts -

The Twenty First Annual Southwest Ohio Digital Symposium will be from 9 AM to approximately 4:30 PM EST, Saturday, January 13, 2007 in Thesken Hall, on the Middletown Campus of Miami University, Middletown, Ohio.

This year's program is still in the works, so please consider what you'd like to see as a presentation. If you have a favorite which you would like to present, please let us know @ k4zle at arrl.net.

So far the proposed topics are:

· D-Star Introduction, Mark Thompson, WB9QZB
· WinLink 2K in SW Ohio, Greg Zach, WG8Z
· A PSK-31 Audio Beacon Project, Jim Everly, K8IKE
· Using a Wide Band Noise Generator, Jay Slough, K4ZLE
· The SoftRock Software Defined Radio Project, Tony Parks, KB9YIG
· AMSAT update, Gerd Schrick, WB8IFM, and Steve Coy, K8UD
· 10 gHz EME project at VOA Museum, Mike Murphy, KA8ABR
· BPL update, Ed Hare, W1RFI --- REMOTE
· The Michigan Digital Network, John McDonough, WB8RCR --- REMOTE
· ARRL news and views by Ohio SM, Joe Phillips, K8QOE, and Great Lakes Division Director, Jim Weaver, K8JE

Other potential presentations are in the wings, such as an AMSAT update, a microwave communications demonstration and more. As you can see, this year's program should be very informative with topics that are state of the art and have immediate real world application. Come meet the folks who are making things happen technically in our hobby, both locally and nationally.

There is no charge for attending the symposium. A box lunch will be available on site. Updates to the program will be posted here on the website, http://www.swohdigi.org/, so please check in from time to time. For further information please contact K4ZLE@....

We will have a "demonstration room" for items on the program, plus any items which you'd like to display. We'd like, in particular, a specialty APRS stations, a working PSK-31 station, and any other systems which you've found useful.

PLEASE PASS THIS ANNOUNCEMENT ON TO OTHER CLUBS & HAMS WHO MIGHT BE INTERESTED.

574. ARRL January VHF Sweepstakes, 1/20 - 1/21

Yahoo group: IndyHamRadio
Date: 2007-01-05 22:24:49 UTC
From: Mark Thompson
Topic: 574 Message: 574

2007 ARRL January VHF Sweepstakes Rules
General Rules · VHF Rules
1. Object: To work as many amateur stations in as many different 2 degrees × 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0400 UTC Monday (January 20-22, 2007).
3. Entry Categories:
3.1 Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.2. Single Operator Portable
3.3. Rover.
3.4. Multioperator.
3.5. Limited Multioperator.
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of signal report is optional.
5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count four points for each 902- or 1296-MHz QSO.
5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees × 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Reporting:
6.1. Electronic submissions may be emailed to JanuaryVHF@... and hand written paper logs or diskettes mailed to January VHF, ARRL, 225 Main St, Newington, CT 06111.
6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes.
6.3. Entries must be emailed or postmarked no later than February 21, 2007.
6.4. Entries may be submitted using the web applet at www.b4h.net/cabforms
6.5. Rovers who submit scores for the club competition must submit a second summary sheet indicating QSOs and score if they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.

7. Miscellaneous:
7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
7.2. Only permitted one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
8. Awards: Certificates will be awarded in the following categories:
8.1. Single operator.
8.1.1. Top single operator in each ARRL/RAC Section for high and low power..
8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator's, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
8.2. Top single-operator portable in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)
8.3. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
8.4. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
8.5. Top limited multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
8.6. Top DX stations where significant effort or competition is evident.
9. Other:
9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)" in November 2001 QST or on the ARRL Web at www.arrl.org/contests
9.2. For more information contact contests@... or (860) 594-0232.

From: Zack Widup
Topic: 574 Message: 575

As it stands now, I plan on being active on 144 through 10368 MHz from a hilltop in EN50rl (my favorite site so far). I'll be Single-Op Portable (QRP). I don't expect big things for 50 MHz and it's just more to try to stuff into a Toyota Corolla, so I'll stick with the bands as above.

I may only be active on Saturday, too, depending on the weather.

I hope to work some of you!

579. Fw: [ve-list:613] Information for Technician Class Licensees

Yahoo group: IndyHamRadio
Date: 2007-01-07 15:18:54 UTC
From: Don West
Topic: 579 Message: 579

Hoosier Hams,
If you have friends that have been "sniffing around" ham radio, let them know that NOW is a great time to "stop sniffing and start eating". Those with Tech licenses now, will gain the Tech-Plus privileges when the code requirement goes away (expected to be around March, see below). A good strategy would be to get your Tech license ASAP and try to be ready to test for the General theory when the code requirement ends.
It is in our best interest to recruit potential hams that we know will be good "Ham Radio Citizens" in a hobby that is largely "self-policed".

73 & Good Hamming,
Don, W9DEW

Subject: [ve-list:613] Information for Technician Class Licensees

Dear VEs:

The telephone has been ringing off the hook in the ARRL VEC offices. Questions have been streaming in regarding the elimination of the Morse code exam.

We are gearing up for an anticipated avalanche of upgrade applications when the rules take effect.

The following information, provided by the ARRL VEC, offers Technicians (and VEs) guidance on the new FCC Rules and can be distributed in the field.

Happy VE-ing!

73,

Maria Somma, AB1FM

Manager ARRL VEC

vec@...

==========

Technician Class Licensees

FCC modifies the Amateur Radio Service rules by eliminating the Morse code exam requirements.

The effective date of the FCC's action will be 30 days after publication in the Federal Register -- most likely in February.

In an historic move, the FCC has acted to drop the Morse code test requirement for all Amateur Radio license classes. The Commission adopted the long-awaited "Morse code" proceeding (WT Docket 05-235), and released it December 19. The FCC's action will eliminate the Morse code test as a licensing requirement to operate on HF.

Technicians Gain Operating Privileges

Once the changes are in effect, all Technician licensees -- whether or not they have passed a Morse code examination -- will have "Tech Plus" operating privileges. This means you will have all of your current VHF/UHF and above frequencies and also will have access to the Novice/Technician Plus frequencies on HF.

No Morse Code Test to Upgrade

Technicians can upgrade to General by passing the General (Element 3) written exam and to Amateur Extra by also passing the Extra (Element 4) written exam. No Morse code test will be required. Visit the ARRL VEC exam search web page http://www.arrl.org/arrlvec/examsearch.phtml for test session locations.

Navigating through the Upgrade Process

1. Technician Amateurs who wish to upgrade to General have a couple of options.

a. We recommend that Technician licensees who have NOT yet passed the General written exam (Element 3) wait until the new rules take effect to upgrade. At a session, the candidate must present a photo ID and their current license, pay the $14 test session fee and fill out the NCVEC form 605. If the Element 3 written exam is passed, the VE team will issue the candidate a CSCE for the upgrade to a general class license.

b. Technician licensees who have already passed the General written exam (Element 3) or wish to pass the General written exam before the rules take effect, will then have to apply for the upgrade at a VE session once the new rules are in place. At a session, the candidate must present a photo ID, their current license and the non-expired CSCE document, pay the $14 test session fee and fill out a NCVEC form 605. If the Element 3 written exam credit is valid, the VE team will issue the candidate a CSCE for the upgrade to a general class license. If the CSCE for Element 3 credit has expired (a CSCE is only valid for 365 days), you will have to retake the examination element in order to receive the credit toward your upgrade.

2. Post Session Process

The VE Team must prepare and mail all session paperwork to the coordinating VEC. Once the session arrives at the VEC, in accordance with FCC rules, the VEC staff must verify all session documentation. All 605 forms and CSCEs must have the candidate's signature and 3 VE signatures. The CSCEs used for General written exam element credit must be validated as being passed within the previous 365 days and/or the test documents must be confirmed as being passed. Finally, the session data and information from the 605 forms can then be keyed and submitted to the FCC. The upgrade should appear in the FCC database http://wireless.fcc.gov/uls/ within a few hours and a new license copy will arrive in the mail in 7 to 10 days.

VEC Test Fee

As you can see, much of the same work is involved in both types of General class upgrades, therefore the administrative costs are embedded in the process.

The FCC has mandated that all paperwork only upgrades be done through a VEC via their VE Teams. The processing and administration of FCC "projects" such as this, actually places a greater demand on all the VECs. This is not a special case involving only a few people; we expect to receive a flood of upgrades to General. The paperwork only upgrade is not automatic for the amateur and the forms may not be sent directly to the FCC or the VEC office (again the upgrade must occur at a test session and follow FCC guidelines). The VEC test session fee is regulated (per annual agreement) by the FCC.

A New Era

When the new rules are in place, we hope you explore your new band allocations, enjoy your new privileges

and have fun!

73,

Maria A. Somma, AB1FM

Yahoo group: IndyHamRadio
Date: 2007-01-08 12:35:29 UTC
From: Brian - KB9BVN
Topic: 581 Message: 581

On February 3rd, an operating event known throughout the QRP world known as FYBO (Freeze Your Butt Off) will take place from 9AM to 7PM Local EST.

There will be several QRP hams meeting at the Johnson County Park at about 8AM to get setup and ready for the operating event. In this event, the colder it is, the more multipliers you get. This is a CW event.

You can see the rules by visiting the http://www.azscqrpions.org website. Same as last year.

In February there isn't much of a demand for shelter houses, so we will probably be set up in the shelter house just across the street from the mini-train site and the rebuilt log cabin there on the "main" drag.

Directions to the park are here:

http://www.johnsoncountypark.com/johnsonpark.htm

We usually have a pot of chili, beef stew, or something going to keep us alive during the day. So grab your gloves and hat and come on down.

582. ARLB003 FCC suspends vanity call sign processing

Yahoo group: IndyHamRadio
Date: 2007-01-13 15:31:25 UTC
From: Mark Thompson
Topic: 582 Message: 582

SB QST @ ARL $ARLB003
ARLB003 FCC suspends vanity call sign processing

ZCZC AG03
QST de W1AW
ARRL Bulletin 3 ARLB003
From ARRL Headquarters
Newington CT January 12, 2007
To all radio amateurs

SB QST ARL ARLB003
ARLB003 FCC suspends vanity call sign processing

The FCC has put new Amateur Radio vanity call sign processing on hold while it modifies the software that handles vanity applications. The suspension is a result of a rule change that went into effect December 15 to discourage the filing of multiple applications by one individual for the same call sign. The FCC is still processing vanity call sign renewal applications.

"The Commission continues to accept vanity call sign applications," says a brief announcement on the FCC's Universal Licensing System (ULS) Web page, http://wireless.fcc.gov/uls/. "However, these applications will not be processed until software changes in accordance with the recent rule making have been fully implemented." Just when that might happen is not known.

As revised in the FCC's recent Report and Order (R&O) in WT Docket 04-140, §97.19(d)(1) stipulates that if the FCC receives more than one application requesting a vanity call sign from a single applicant on the same receipt day, it will process only the first application entered into the ULS. "Subsequent vanity call sign applications from that applicant with the same receipt date will not be accepted," the rule concludes.

The FCC says that when it resumes processing new vanity applications, it will handle pending applications "consistent with the date order in which they were received."

This suspension affects new vanity call sign applications submitted on December 18 or later. Typically, it takes 18 days from the time the FCC receives a vanity application until the call sign is issued -- or the application is denied. The FCC granted the last new Amateur Radio vanity call signs on January 4 for applications received December 15.

All vanity call sign renewal applications, including those for club stations, must be filed via the ULS. The current vanity call sign fee, payable for new applications as well as renewals, is $20.80 for the 10-year license term.

588. Codeless Amateur Radio Testing Regime Appears Set to Begin February 23

Yahoo group: IndyHamRadio
Date: 2007-01-20 20:17:10 UTC
From: Mark Thompson
Topic: 588 Message: 588

Codeless Amateur Radio Testing Regime Appears Set to Begin February 23

NEWINGTON, CT, Jan 19, 2007 -- The ARRL has learned that the FCC's Report and Order (_R&O_ (http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf)) in the "Morse code proceeding," WT Docket 05-235, is scheduled to appear in the Federal Register Wednesday, January 24. Assuming that occurs, the new Part 97 rules deleting any Morse code examination requirement for Amateur Radio license applicants would go into effect Friday, February 23, 2007. The League cautions that this date is tentative, pending official confirmation and publication.

"This change eliminates an unnecessary regulatory burden that may discourage current Amateur Radio operators from advancing their skills and participating more fully in the benefits of Amateur Radio," the FCC remarked in the Morse code R&O.

Publication of the R&O in the Federal Register starts a 30-day countdown for the new rules to go on the books. The FCC reportedly completed its work on the R&O this week and forwarded it to the Federal Register receiving desk. The Federal Register must make the document available for public inspection 24 hours prior to publication. Federal Register personnel are constrained by law from saying if a particular R&O is in the publication queue, however. Rules and regulations that appear in the Federal Register constitute their official version.

Deletion of the Morse requirement is a landmark in Amateur Radio history. Until 1991, when a code examination was dropped from the requirements to obtain a Technician ticket, all prospective radio amateurs had to pass a Morse test. Once the new rules are in place, Amateur Radio license applicants no longer will have to demonstrate Morse code proficiency at any level to gain access to the HF bands.

On or after the effective date of the new rules, an applicant holding a valid Certificate of Successful Completion of Examination (CSCE) for a higher license class will be able to redeem it for an upgrade. For example, a Technician licensee holding a valid CSCE for Element 3 (General) could apply at a VEC exam session, pay the application fee -- which most VECs charge -- and receive an instant upgrade. A CSCE is good only for 365 days from the date of issuance. Candidates for General or Amateur Extra between now and the effective date of the new rules still must have Element 1 (5 WPM Morse code) credit to obtain new privileges, however.

The new rules also mean that all Technician licensees, whether or not they've passed a Morse code examination, will gain HF privileges identical to those

of current Novice and Tech Plus (or Technician with Element 1 credit) licensees without having to apply for an upgrade. Novices and Technicians with Element 1 credit have CW privileges on 80, 40, 15 meters and CW, RTTY, data and SSB privileges on 10 meters.

The FCC R&O includes an Order on Reconsideration in WT Docket 04-140 -- the so-called "omnibus" proceeding. It will modify the Amateur Service rules in response to ARRL's request to accommodate automatically controlled narrowband digital stations on 80 meters in the wake of other rule changes that were effective last December 15. The Commission designated 3585 to 3600 kHz for such operations, although that segment will remain available for CW, RTTY and data.

The ARRL has been posting all relevant information on these important Part 97 rule revisions on its "_FCC's Morse Code Report and Order WT Docket 05-235_ (http://www.arrl.org/fcc/morse/) " Web page.

SB QST ARL ARLB006
ARLB006 ARRL Board accepts National Emergency Response Planning
Committee report

The ARRL Board of Directors accepted the Report of the National Emergency Response Planning Committee (NERPC) when it met January 19 and 20 in Windsor, Connecticut. Upon dissolving the committee with its thanks, the Board set in motion a process to identify and implement action items in the report as soon as possible. ARRL First Vice President Kay Craigie, N3KN, chaired the 13-member NERPC, charged with developing comprehensive recommendations to improve the League's response to regional, national and international disasters. Among other things, panel members evaluated the responses and actions of ARRL and the Amateur Radio Emergency Service (ARES) during Hurricane Katrina as well as lessons learned.

"If 'lessons learned' are not followed by 'behaviors changed,' then the lessons have not been learned at all," the report concludes. The report describes disaster preparedness as "a moving target, moving faster all the time." No recommendations, plans or systems should be considered "the permanent answers for all circumstances and hazards," the report asserts.

The unprecedented scope of the Katrina response placed ARRL Headquarters into a leadership coordination role through national-level requests for help from served agencies such as the American Red Cross. While the level of expertise in emergency communications and emergency management among US radio amateurs is growing, the report noted, so is the expectation that the ARRL provide first-rate leadership and guidance.

Among the report's wide-ranging recommendations and suggestions:

* enhance ARRL and ARES training in basic message handling.

* develop a continuing education course covering installation, configuration, and use of Winlink 2000 for e-mail.

* formally establish a national ARES volunteer database for use during major disasters and establish training criteria.

* institute a Major Disaster Emergency Coordinator (MDEC) function to coordinate responses to large-scale national or regional disasters or emergencies.

* become better acquainted with the emergency response needs of distant ARRL sections, such as Pacific, Puerto Rico, Virgin Islands and Alaska.

* improve working relationships with national-level served agencies.

* ensure ARRL staff training in the Incident Command System (ICS) and National Incident Management System (NIMS) and, as necessary, adapt ARRL's emergency response structure to the Unified Command model.

In addition, ARRL President Joel Harrison, W5ZN, has appointed an ad hoc committee to study issues relating to background investigations as they apply to ARRL Amateur Radio volunteers and to recommend a background investigation policy.

That's the best place to look for Central Indiana spotter training information. Dave Tucek, Warning Coordination Meteorologist for the Indianapolis NWS Office, is setting up spotter talks around their coverage area and is posting the dates, times, and locations on the NWS web site.

In addition to the basic spotter talks that Dave is conducting, the Indiana-Michigan-Ohio Skywarn group will be hosting an Advanced Weather Spotter Symposium in Elkhart on March 10. Details can be found at their web site, www.imoskywarn.org. I have attended these sessions in Elkhart in the past and they are very worthwhile.

Let me also take this opportunity to remind everyone that the Central Indiana Skywarn Association, the group that manages the Central Indiana Skywarn nets, sometimes known as the "state" net, maintains a web site at www.w9nws.org. We have been working diligently over the past few months to bring the site back from some problems it encountered last fall and make the site a useful resource for severe weather spotters in the area. If you there is weather information that you are looking for or if you have links to interesting sites, please let me know so I can continue to improve the site.

Hello Bob,
Thank you for the additional information. Your site looks great! Very nice work, and lots of good information. Thanks for all that you and the whole SKYWARN Team does for all Hoosiers. I happened to speak with Dave Tucek on Friday. I am trying to get the Indiana Department of Homeland Security more involved in promoting weather radios with the S.A.M.E. feature throughout the state. We have had some support in central Indiana from WTHR, Channel 13. I will be contacting them to see if they are planning a promotion again this year.
Dave mentioned that he did not believe that we have had promotion programs in the South Bend, Lafayette or Fort Wayne markets in the past, so I am hopeful that we can get them involved.

73,
Don, W9DEW

I know that some of the county EMA's were able to purchase Midland
weather radios with SAME at a reduced price using Federal Homeland
Security money. I don't know how many of them followed through with
getting them into the hands of the general public, though. In my
county, the plan was to make sure that every school had one.

Subject: Sparks

Greetings Friend of the Tri-State Amateur Radio Society!

Attached is the complimentary February 2007 issue of Sparks, and a late addition to Sparks about how the new FCC rules may affect the pocketbook of those upgrading to General Class. (It is related to the timing of the schedule of testing and filing upgrade paperwork.).

The .pdf files can be read with Adobe Acrobat Reader. For a FREE download, see: http://www.adobe.com/products/acrobat/readstep.html.

As a Friend of TARS, you are cordially invited to join our members at our next club meeting: the TARS Annual Banquet. It will be held at the West Side Golden Corral (130 Cross Pointe Blvd), 6 PM Thursday February 8th. The cost to attend the all you can eat banquet is $5 for all guests. TARS is picking up the rest of the tab. When you arrive, mention you're with TARS and proceed to the dining room. Do not pre-pay at the door.

I hope to see you there!!

73s! Joanne Alexandrovich - KB9LXZ

607. Special VE Session Saturday February 24th

Yahoo group: IndyHamRadio
Date: 2007-02-08 05:04:45 UTC
From: Mike Brown
Topic: 607 Message: 607

The Chief Anderson VE Team is holding a special session on Saturday the 24th of February. This is due to the rules changing, and those who have General class written credit, have to attend a VE session somewhere, to get their paper work done so then they will be upgraded to General. I think you still have to wait until it shows up on the internet that you are a General, before you can start using General privileges. There is still the charge, just as if you were taking a test. Also, regular testing will also be available, like any other VE Session. For more information contact Al, WB9AL at (765) 642-7291

Thanks... Mike, K9MI

INARRL BULLETIN 02-2007
7:42AM EST FEBRUARY 15, 2007

W1AW Special Event, Midnight Exam Sessions to Mark New Amateur Rules

NEWINGTON, CT, Feb 9, 2007 -- As new Amateur Radio Service rules phase in Friday, February 23, eliminating the Morse code requirement, Hiram Percy Maxim Memorial Station W1AW will mark the milestone with a weekend-long special event. In addition, a number of Central Connecticut volunteer examiners will be on hand at ARRL Headquarters -- both before and after the new rules become effective at 12:01 AM EST -- to offer Amateur Radio examinations under both the current and new rules. ARRL Regulatory Information Specialist Dan Henderson, N1ND, is helping to coordinate the celebration. He says Headquarters staff and other volunteers will keep W1AW active for the "Welcome Weekend" event.

"W1AW will be on the air all weekend for this special event to celebrate the fact that so many amateurs have gained or will earn new privileges as a result of the rule changes," he said. "The station will operate starting at 12:01 AM Eastern Time on Friday, February 23, continuing into the wee hours and resuming operation during the day. Then W1AW will be on the air on both days of the weekend, from 10 AM until 5 PM -- perhaps longer as conditions and enthusiasm dictate."

Operation will be on both SSB and CW. W1AW operators will concentrate their activities on the Technician and General class HF subbands. On SSB, the station will use its normal phone frequencies -- 1.855, 3.990, 7.290, 14.290, 18.160 and 21.390 MHz. On 10 meters, W1AW will operate SSB on or about 28.480 MHz.

Henderson says operating will be casual unless pileups develop. "The purpose is to welcome newcomers to new privileges," he said.

"First Contact" certificates will be available as part of this event. ARRL invites anyone making a first contact or first HF contact to enter the contact information on the ARRL "Welcome Weekend" Web site and receive a certificate in return. "If the first contact is with W1AW we will also be including a W1AW QSL card for the contact," Henderson added.

The ARRL anticipates a huge influx of upgrade applications once the Morse code requirement disappears. In addition, all Technician licensees will have limited HF privileges starting February 23, whether or not they've passed a Morse code test.

Amateur Radio exam sessions both before and after the zero hour will offer an opportunity for applicants either to upgrade under the outgoing licensing rules at the last possible opportunity or under the new licensing rules at

the first possible opportunity.

"Dual exam sessions are scheduled at ARRL Headquarters around the effective time of the new licensing rules," says Brennan Price, N4QX, a former ARRL staff member and an ARRL VEC volunteer examiner. "At 11 PM on February 22, a session will be held for candidates wishing to upgrade under the existing rules. A few folks have expressed interest in such a session." Price says all Amateur Radio written and telegraphy elements will be offered until midnight.

"At 12:01 AM February 23, a second session will begin under the new licensing rules," he said. "Examiners will not only be evaluating previously earned Certificates of Successful Completion of Exam (CSCEs) for upgrades, but will be offering all written elements." Two teams of volunteer examiners will be on site until all applicants have been served.

On or after February 23, applicants upgrading on the basis of a valid CSCE must present the certificate for element credit, fill out an application and pay any applicable exam session fee, which most VECs charge. Only after the VE team has issued a CSCE for upgrade credit may applicants actually use their new operating privileges on the air.

Additional Welcome Weekend information will be available on the ARRL Web site in the days leading up to February 23.

Once upon a time there was a hamfest st Turkey Run State Park. That was decades ago. I wish it were still going!

That would be a little west of your area but not too far.

Zack,

The hamfest at Turkey Run State Park was run by the Wabash Valley Amateur Radio Assn from Terre Haute. Several years ago, the Indiana DNR decided to prohibit those type of "commercial" activities in the state parks. Consequently, two of the more popular hamfests in Indiana had to move, Turkey Run & Spring Mill. The hamfest that was in Spring Mill State Park is now the Bedford Hamfest. After several years of inactivity, the WVARA is once again sponsoring a hamfest in the Terre Haute area. It will be held on Saturday, March 10, at the Wabash Valley Fairgrounds (Vigo County) located on US 41 just south of I-70. Hours are 8 am to noon. Go online to W9UUU.org for more info.

James M. Fonte, 50, of LaPorte, IN, passed away on Sunday, February 18, 2007, in his home.
Jim was born on March 13, 1956, in Chicago, IL, to the late James V. and Marie B. (Rendak) Fonte. He moved to the Hudson Lake/New Carlisle area and lived there all of his life.

On February 13, 1982, in New Carlisle, he married Billie J. Borders, who survives. Along with his wife of 25 years, he is survived by a daughter, Shaunna M. Fonte of LaPorte; three sons, Brian J. (Coweena) Borders of Mishawaka, Shane L. (Amy) Borders of Granger, IN and Jamie R. (Jessica) Borders of South Bend; five grandchildren, Dalton and Tyler Borders, Michael Block, Brittany Meredith and Alison Graham; one great-grandchild; a sister, Aleta Fonte of Europe and by a nephew, Alasandro Lenzen of Germany. Along with his parents, he was preceded in death by a sister, Marilyn.

Mr. Fonte worked as a senior telecommunications consultant for AT & T in Chicago, for six years. He was an amateur radio operator and his call sign was K9FI. He was a member of the Quarter Century Wireless Association and the Michigan City Amateur Radio Club. Jim enjoyed riding his motorcycle and playing poker. He especially loved his family and friends.

Visitation will be from 11 to 2 PM EST Wednesday, February 21, 2007, in the Kaniewski Funeral Home, 3545 N. Bendix Drive, South Bend. Funeral services for Jim will follow at 2 PM in the funeral home.

Memorial contributions may be made to the American Cancer Society, 601 W. Edison Rd., Mishawaka, IN 46545.

From: Ray Andrews
Topic: 624 Message: 627

Brad,

Last year, we had over 260 in attendance. We moved to a bigger location this year because of the number attending. We have several commercial vendors committed to be here this year. So, to answer your questions...

1.) Is it a big event? -- Not big, but getting bigger every year.
2.) Is it well attended? -- Considering we are relatively new, yes, it is very well attended.

Of course, your questions are subjective. The best thing to do is to come over & decide for yourself.

Hope to see you here next week.

73, Ray, K9DUR

Topic: 635 Message: 635

I wanted to say hello to everyone here in the group. I live in Franklin, and I have always wanted to get my license. I went through the class several years ago and had to quit due to my Grandpa suffering a severe heart attack. I never took the class after that. I am looking forward to the class being held at the White River TWP. library later this month. I will take the class and pass this time. Thanks again to Don for the invite and I hope to be a good help to the Ham radio operators here in the area.

Don't miss out on the fun!

643. Fw: ARRL Position on the American Red Cross Background Check Policy

Yahoo group: IndyHamRadio
Date: 2007-03-15 21:11:49 UTC
From: Mark Thompson
Topic: 643 Message: 643

ARRL Position on the American Red Cross Background Check Policy
Last year, the American Red Cross announced that it was implementing a background check procedure which would be mandatory for its staff and volunteers. Many ARRL members, including those who are also Red Cross volunteers, and ARES members who provide emergency communications for the benefit of the Red Cross, have questions about this policy, and whether or not it applied to them. ARRL offers the following information on this subject, so that ARRL members can decide for themselves whether or not to participate in this program. This information is subject to change, however, as ARRL and the Red Cross have commenced some discussions about the application of the Red Cross policy to Amateur Radio operators providing emergency communications. Should any of the following information change, ARRL will modify this posting immediately, so please review this page periodically.

ARRL will not attempt to advise members what organizations they should or should not support, or the extent to which they should comply with policies that such an organization requires in order for them to accept volunteer Amateur Radio communication services. However, we feel compelled to caution ARRL members to read very carefully any request for, or consent to the collection or disclosure of, personal, normally private information from a served agency. ARRL members should carefully consider what is being requested; for what purpose the information is needed; to what use the information will be put; and to whom it will be disclosed.
While there have been conflicting statements by local chapters, the National Headquarters of the American Red Cross apparently intends to require that all radio amateurs who provide communications for the Red Cross submit to a background check. Their policy applies to all partner organizations that do not themselves conduct criminal background checks on their members. ARRL, of course, does not conduct background checks. Some ARRL members are willing to submit to a criminal background check in order to volunteer to provide communications for the benefit of the Red Cross. The Red Cross has delegated the conducting of the background checks to a separate, private company. The private company has a consent form which is a requirement for the background check. The deadline for compliance with this Red Cross requirement, twice postponed, is now March 31, 2007. After that date, the Red Cross indicates that they will not accept volunteer services from those individuals who have not complied.

Initially, the Red Cross' requirements included more than a criminal background check. Volunteers were also to be required to grant permission for the Red Cross' background investigation company to conduct a "credit check" and a "mode of living" check as well. Additionally, the Red Cross indicated that the only criminal background check they would accept would be from its own investigation company, "mybackgroundcheck.com."

On February 6, 2007, the Interim CEO and the National Chair of Volunteers of the Red Cross jointly announced that the policy had changed; (1) that only criminal background checks would be required of Red Cross volunteers; that credit checks would not be required except where separate permission was granted; and that mode of living checks would not be conducted on volunteers under any circumstances. However, the Red Cross' investigation company consent form still includes consent to the conduct of an "investigative consumer report." The Federal Trade Commission's definition of that term specifically includes

"mode of living" checks and certain credit checks. The consent form that is required by the Red Cross, therefore, would permit both credit checks and mode of living checks, and not just criminal background checks. (2)
The new consent form used by "mybackgroundcheck.com" does not disclose to the person consenting to the search that he or she is in fact granting permission to have a credit check or mode of living check performed, but only makes reference to a "consumer investigative report" (3) without explaining it.
Although the Red Cross promises that it will not conduct a mode of living check or a credit check of volunteers, its contractor continues to require permission to conduct such investigations. ARRL has inquired of the Red Cross as to the reason for this, but to date has not received a satisfactory explanation.
Should the Red Cross clarify or further modify its background check policy in response to ARRL's written inquiry and the negotiations commenced thereby, we will provide that information immediately for the benefit of ARRL members and ARES participants.

(1) That announcement was as follows:

The following message is from Jack McGuire, Interim President and CEO and Kate Forbes, National Chair of Volunteers:

On December 22, 2006, we announced that the background check deadline was extended until March 31, 2007 and that a leadership team would examine specific aspects of the program so that they were better understood and accepted across the organization. This week, we approved key modifications to the program, specifically related to the consent form. We believe these changes respond to legitimate concerns and still maintain a strong organization-wide background check program.
The following summarizes the changes:
A new consent form will be developed that eliminates all references to credit checks and mode of living. The Red Cross will not run future credit checks or mode of living checks on anyone who has signed the previous consent form. The Red Cross will consider that consent form null and void as to the credit check and mode of living authorizations, and promises not to conduct a credit check on individuals unless we obtain a second consent form from them authorizing those checks. Mode of living checks will not be conducted under any circumstances. In an effort to establish and maintain consistency across the organization, Jane Gilbert, Senior Vice President, Service Area Support, will convene a working group to establish an ongoing credit check policy that will define which positions require a credit check in the future and how to evaluate credit checks for those positions.

You may be wondering why we made these changes and particularly, why now. We listened to your concerns and feedback and determined that adding another consent form in the event that a credit check is needed best met the needs of our volunteer force. This change does not reflect negatively upon the admirable efforts of the many units that worked extremely hard to meet the goals of this initiative by conducting background checks on their employees and volunteers. We believe it underscores the fact that an open dialogue on these issues is critical to the success of this program. These are positive changes that do not compromise the program, but rather advance our shared goal of having a consistent and standard background check program for all employees and volunteers who serve under the American Red Cross symbol. All other aspects of the program remain unchanged, including the deadline of March 31, 2007, by which all employees and volunteers must undergo and clear a background
check.

Employees and volunteers who have not cleared a background check by this date will no longer be able to serve with the Red Cross until they do so.

We would also like to take this opportunity to thank the National Background Check Office for their hard work and dedication in assisting the implementation of the program across the organization. If you have questions, please contact the National Background Check Office at backgroundchecks@... or (800) 507-3960.

(2) The following text is from the Federal Trade Commission website defining the term "investigative consumer report":

(e) The term "investigative consumer report" means a consumer report or portion thereof in which information on a consumer's character, general reputation, personal characteristics, or mode of living is obtained through personal interviews with neighbors, friends, or associates of the consumer reported on or with others with whom he is acquainted or who may have knowledge concerning any such items of information. However, such information shall not include specific factual information on a consumer's credit record obtained directly from a creditor of the consumer or from a consumer reporting agency when such information was obtained directly from a creditor of the consumer or from the consumer.

(3) The following text is from mybackgroundcheck.com's website, which discusses the information that is being requested:

Disclosure Regarding Background Investigation
American Red Cross ("RED CROSS") will procure a consumer report and/or investigative consumer report on you for the limited purpose of evaluating you for a position with RED CROSS. MyBackgroundCheck.com, LLC ("MBC") an affiliate of Pre-employ.com, or any agent of MBC, will obtain the report for RED CROSS. MyBackgroundCheck.com is located at 2301 Balls Ferry Road, Anderson, California 96007 and can be reached at 800-300-1821.

The report will contain any written, oral, or other communication of any information by a consumer reporting agency bearing on your character, general reputation, personal characteristics which is used or expected to be used or collected in whole or in part for the purpose of serving as a factor in establishing your eligibility for (A) employment purposes; or (B) any other purpose authorized under section 604 of the Fair Credit Reporting Act. The types of information that may be obtained include, but are not limited to: social security number verification, criminal records checks, public court records checks, driving records checks, educational records checks, verification of employment positions held, personal and professional references checks, licensing and certification checks, etc.

The information contained in the report will be obtained from private and/or public record sources, including sources identified by you or through interviews or correspondence with your current or former employers, educational institutions. You understand that while the information contained in the report or reports provided has been obtained by various third parties from public record data sources deemed reliable, their accuracy cannot be guaranteed due to potential human error in the actual recording or retrieval of the record. The nature and scope of this disclosure and authorization is all-encompassing, however, allowing RED CROSS to obtain from any outside organization all manner of consumer reports and/or investigative consumer reports now and, if you are hired, throughout the course of your employment or volunteer service to the extent permitted by law. As a result, you should carefully consider whether to exercise your right to request disclosure of the nature and scope of any investigative consumer report.

If anyone has a repeater list for central Indiana I would really appreciate it if you would email it to me. I would like to do some monitoring on my scanner before becoming active on the frequencies. I have the 146.835 PL 151.4, but that it. Please include PL tones if you have them. Any help would be greatly appreciated.

A pretty complete Marion County based list is at http://indyhams.org/docs/Marion%20County%20Repeater%20Locations.pdf. Also, the site that that list resides on, http://indyhams.org/ is the Marion County ARES Emergency Coordinator's. It has some pretty good info on ham radio events in the area. One other site you might want to check out is for the Indianapolis Radio Club, at http://www.indyradioclub.org/. You can sign up on line there for the club's newsletter, as well as see past ones to see what's going on in the area. Good luck on your studies!

Thanks to everyone that submitted replys to my question. I have several programmed in now. It seems that alot of the repeaters in some of the databases that I have looked at are outdated. There are several active repeaters in Indy, but Johnson County (146.835) seems to be fairly quiet. I also noticed that the Brown County VHF 147.300 has 2 different PL tones 136.5 and 88.5. Why is that? Thanks again.

651. Fw: FCC NOW POSTING AMATEUR RADIO ENFORCEMENT ACTIONS

Yahoo group: IndyHamRadio
Date: 2007-03-17 15:58:30 UTC
From: Mark Thompson
Topic: 651 Message: 651

FCC NOW POSTING AMATEUR RADIO ENFORCEMENT ACTIONS

Amateur Radio enforcement correspondence -- with some exceptions -- now is available to the public on the FCC's "Amateur Radio Service Enforcement Actions" Web site <http://www.fcc.gov/eb/AmateurActions/Welcome.html>. The listing will be cumulative, and Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth anticipates updating it every 7 to 10 days.

The site will not be a comprehensive listing of enforcement correspondence. For example, it will not include letters requiring retesting pursuant to §97.519(d) of the FCC's rules, letters regarding radio frequency interference to amateur licensees and letters requesting an initial response to a complaint.

As a result of irregularities detected by ARRL VEC in examination sessions in Clinton, South Carolina, in June and July 2006, Hollingsworth has issued retest orders to Technician licensees in Simpsonville, Greenwood, and Clinton, South Carolina, to an Amateur Extra licensee in Joanna, South Carolina (Elements 3 and 4), and to a General licensee in Laurens, South Carolina (Element 3).

He also wrote to Tri-County Electric Cooperative, Azle, Texas; Northfork Electric Cooperative, Sayre, Oklahoma; Bit-by-Bit Horse Farms, Wind Gap, Pennsylvania, and to a resident of Gallipolis, Ohio, requesting they work with Amateur Radio licensees regarding RF interference generated by power line hardware and other devices.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth in the FCC Spectrum Enforcement Division <fccham@...>.

Get your own web address.
Have a HUGE year through Yahoo! Small Business.

Grant,

For some reason, 146.835 MHz has been fairly quiet for years. I used to live in Johnson County and it was always hard to get conversation on that one. However, the Mid State Amateur Radio Club that runs it is full of nice folks.

My $.02,

Alex AA9XY

There are tons of repeaters in Marion County. I have found about 75 or so in central Indiana. I have heard traffic on maybe 30 of them. I remember 5 years ago or so 2 meters was very busy. Are most people below 50 MHZ now? Are there any known simplex frequencies with traffic around central Indiana? I remember seeing some NASA and other Government frequencies in the Ham band several years ago. Thanks again everyone for the help.

Thanks. Well after going through the first class through MARC I am ready to test. I attended the first session this Wednesday. I found a website with random questions, and I have been using that site every night. I have taken the test about 25 times or so and passed about 95% of the time. I will test at the Columbus ham fest unless someone knows of a testing closer or sonner that next weekend. Again thanks to everyone for all of the help.

Topic: 644 Message: 656

Good deal, Grant. I have two sample test sites you might want to check out, they're both in somewhat different formats. You're probably already using one of these. The first is probably the most popular: http://www.qrz.com/p/testing.pl. This is the QRZ.COM site. In addition to the sample tests, once you get your ticket, it will be listed here. The other site is thought by several to be more representative of how the actual test will be. There's no "instant gratification" with this one, as there is with QRZ. Go to http://aa9pw.com/radio/ for a good sample test site.

As far as testing, according to the ARRL website (http://www.arrl.org/arrlvec/examsearch.phtml?State=IN), Greenfield is testing tomorrow (Saturday, March 24).

Good luck, and let us know how it goes!

73,
Ken

Grant

You're going to pay for the test anyway, so go ahead and take them all. You might be surprised.

In Nov of 1998 I walked into a testing site at the Red Cross in Indy...Iwas a lowly Technician with 5WPM that I earned as a Novice. I wanted to take the general written ONLY. I had studied for the general on the various websites and I only missed one question....they then beat me up and forced me at the end of a cherry red twizzler and a diet pepsi intot he CW testing room. I was SURE I was going to blow it....my CW was good only to about 8 WPM, which was no where near 13 WPM....but when the CW started coming, I started copying. My continuous copy was terrible...BUT I got 8 out of 10 questons right on the fill in the blank test....so I left with my full general upgrade without intending to do so.

So tonight..go through the tech questions a couple times, AND the general questions a couple times, and take the test. With daily study on the web sites, you can pass the Extra test in less than a month or so. Now, you won't KNOW the theory, but you'll KNOW the test. It's a starting spot.

I have learned more about radio theory and building stuff since I got my general in 1998 and my Extra in 2002, by just operating, building, and reading stuff. It's a great hobby!!

I have used those. I will be traveling to Greenfield in the morning
to test. I am ready and don't want to wait any longer than I have to.
Greenfield is a straight shot up SR 9 from Shelbyville and I know the
area. Thanks again to everyone and I will post as soon as I pass
tomorrow.

659. Fw: Fwd: RM-11306 Confusion About CW Sub-Bands

Yahoo group: IndyHamRadio
Date: 2007-03-23 19:22:56 UTC
From: Mark Thompson
Topic: 659 Message: 659

23 MAR 2007 - 1245 CDT

All ARRL officers and directors are starting to receive email messages about the recent ex parte discussion ARRL had with the FCC about RM-11306; the ARRL's proposal to regulate Amateur Radio Service HF sub-bands by bandwidth. Because of what amounts to a clerical oversight, a number of amateur radio licensees are concerned, even angry, about what appears on the surface to be another move to curtail the use of Morse code communications. This is not the case and those who insist on saying it is, either don't know all the facts or have other motives for making their complaints and threats.

What follows is a summary history of RM-11306 provided by ARRL CEO Dave Sumner, K1ZZ. All the words are his with the exception of the lead-in sentence in the last paragraph.

In July 2002 the ARRL Board of Directors adopted the following policy: "At the next practical opportunity the ARRL shall petition the FCC to revise Part 97 to regulate sub-bands by signal bandwidth instead of by mode." The Board's objective was to update rules that were written long before the development of the current generation of digital modes so that digital emissions can be appropriately regulated in the future, while impacting traditional modes as little as possible.

Turning that statement of principle into a detailed petition proved to be no easy task. The Board received input from an ad hoc committee as well as staff, and twice solicited input directly from the ARRL membership. Hundreds of comments were received each time and helped inform the Board's discussions. Finally, at its July 2005 meeting the Board concluded its review of a draft petition and authorized its filing, following final review by the Executive Committee. The resulting petition was filed on November 14, 2005 and was designated RM-11306 by the FCC, after which additional comments were filed by individuals directly with the FCC.

Once the FCC had dealt with two outstanding proceedings, WT Dockets 04-140 and 05-235, we realized that the bandwidth petition was the next major Amateur Radio item in their hopper. On reviewing the RM-11306 petition, the comments, and the rules changes adopted in Dockets 04-140 and 05-235 it was apparent that some of the proposals contained in the petition had been affected by the changes adopted in the other two proceedings. It was also apparent that some aspects of the petition remained controversial.

After reviewing the situation at its January 2007 meeting, the ARRL Board authorized General Counsel Chris Imlay, W3KD to determine what

changes to the petition had to be made to align it with the new FCC rules, as well as which aspects of the petition were not controversial and could reasonably be expected to be included in an FCC Notice of Proposed Rule Making. Chris did so, and a meeting was held with FCC staff on February 13. As are all such meetings, this was made a matter of public record by the filing of a notice with the FCC Secretary that immediately became part of the on-line record in RM-11306.

The FCC staff was provided with a shortened list, or subset, of proposed rule changes from that contained in RM-11306. The list is included with the notice of the meeting. Because the proposals affecting the bands above 28 MHz had not aroused much controversy, they were retained in the shortened list. Regulation by bandwidth rather than by mode of emission remains controversial below 28 MHz because of perceived potential impact on established operating patterns, so these proposals were removed from the list with one narrow exception. The exception is necessary because, as discussed on page 11 of the RM-11306 petition, under the existing rules there is presently no effective bandwidth limit on HF digital operations. Digital emissions using multiple carriers, such as OFDM, can be designed for any bandwidth while staying within the existing rules. So, the subset of proposed rule changes given to the FCC on February 13 includes a bandwidth limit of 3 kHz on RTTY and data emissions below 28 MHz. It is important to understand that this does not increase the allowed bandwidth for RTTY and data emissions; it actually represents a new limitation that accommodates existing practice but prevents future monopolization of large segments of our narrow MF/HF bands by a single digital station. Also, the limit would not apply to phone emissions.

Some confusion has resulted from an item that, through oversight, was not deleted when the list of proposed rule changes was shortened. Because RM-11306 had proposed that bandwidths in most of the band segments now used for CW and RTTY be limited to 200 Hz and 500 Hz respectively, the existing 500-Hz bandwidth limit that applies to certain automatically controlled RTTY/data stations was redundant and could be dropped. However, because the subset of proposed rule changes does not substitute regulation by bandwidth for regulation by mode of emission, the 500-Hz limit needs to be retained. General Counsel Imlay has filed an erratum with a corrected list of proposed rule changes that makes it clear there should be no change to the existing Section 97.221. We regret the error.

Some amateurs have observed that the subset of proposed rule changes provides less protection to CW, RTTY and other narrowband modes than was afforded by the ARRL's proposals in RM-11306. This is true. However, it is not true that less protection is afforded than is the case with the existing rules. In fact, protection against interference from wide digital modes would be increased, not decreased, by adoption even of the subset.

The ARRL Board, having studied the situation literally for years, continues to support the principles of regulation by bandwidth that are contained in the original RM-11306 petition. Regulation by bandwidth provides a better regulatory framework, not only for the introduction of future digital emissions but for the protection of traditional narrowband modes as well. By providing the FCC with a subset of the modifications proposed in RM-11306 the ARRL has offered an alternative that, it is hoped, will make it easier for the FCC to move at least part of the way in that direction.

And for the truly paranoid or perhaps those who are not familiar with the FCC's table of authorized emissions in Part 97, here is specific information about the CW sub-band allocation. CW is not listed in the table of authorized emissions ONLY because it is covered by the blanket statement in 97.305(a): "(a) Except as specified elsewhere in this part, an amateur station may transmit a CW emission on any frequency authorized to the control operator." This isn't mentioned in RM-11306 or in the appendix to the ex parte statement because no change is proposed.

660. ARRL OFFERS ALTERNATE APPROACH TO "REGULATION BY BANDWIDTH

Yahoo group: IndyHamRadio
Date: 2007-03-24 04:36:39 UTC
From: Mark Thompson
Topic: 660 Message: 660

==>ARRL OFFERS ALTERNATE APPROACH TO "REGULATION BY BANDWIDTH"

In the wake of recent changes in the Part 97 Amateur Radio rules, the ARRL has revised its “regulation by bandwidth” proposals to match the new reality, avoid some unintended consequences and temper some of the controversy the original petition had aroused. In a November 2005 Petition for Rule Making (RM-11306 <http://www.arrl.org/announce/regulatory/rm-11306/RM-11306-asFiled.pdf>) <http://www.arrl.org/announce/regulatory/rm-11306/RM-11306-asFiled.pdf>, the League asked the FCC to establish a regulatory regime that would segment bands by necessary bandwidths ranging from 200 Hz to 100 kHz rather than by emission mode. The ARRL now is urging the FCC to adopt a "subset” of the rules <http://www.arrl.org/announce/regulatory/rm-11306/appendixA.html> <http://www.arrl.org/announce/regulatory/rm-11306/appendixA.html> contained in its original petition that largely affects only the amateur bands at 28 MHz and above.

“Because the proposals affecting the bands above 28 MHz had not aroused much controversy, they were retained in the shortened list,” ARRL CEO David Sumner, K1ZZ, explained this week. “Regulation by bandwidth rather than by mode of emission remains controversial below 28 MHz because of its perceived potential impact on established operating patterns, so these proposals were removed from the list with one narrow exception.”

That exception addresses the fact that current rules impose no effective bandwidth limit on HF digital operation. “Digital emissions using multiple carriers, such as OFDM [orthogonal frequency division multiplexing], can be designed for any bandwidth while staying within the existing rules,” Sumner points out, “so, the subset of proposed rule changes includes a bandwidth limit of 3 kHz on RTTY and data emissions below 28 MHz.”

The proposed 3 kHz RTTY/data bandwidth limit aims to avoid the possibility existing under the present rules that a single digital station could monopolize large MF and HF band segments. In an Erratum this week the ARRL also asked the FCC to retain the existing 500 Hz bandwidth limit that applies to certain automatically controlled RTTY/data stations under §97.221.

The ARRL proposal would amend the definition of “bandwidth” in §97.3(a)(8) to read: “For a given class of emission, the width of the frequency band which is sufficient to ensure the transmission of information at the rate and with the quality required under specified conditions.” The rule references the definition of “necessary bandwidth” appearing in Parts 2 and 97 of the FCC rules.

If the FCC adopts the League’s revised proposals, the 10, 6 and 2 meter amateur bands would be segmented into subbands allowing maximum emission bandwidths of 200 Hz, 500 Hz, 3.0 kHz (with an exception for double-sideband, full-carrier AM phone), 16 kHz or 100 kHz. Above 222 MHz, the entire emission must be within the allocated Amateur Radio band to comply with §97.307(d).

Sumner concedes that the subset of proposed rule changes in RM-11306 would provide less protection to CW, RTTY and other narrowband modes than the League’s original proposals afforded, but not less than the existing rules provide. “In fact, protection against interference from wideband digital modes would be increased, not decreased, even by adoption of the subset,” he contended.

Some confusion arose because of an inadvertent omission in the initial notice of a meeting on this subject between ARRL officials and FCC staff. This week's Erratum addressed that issue.

Additional consternation followed in the wake of a widely circulated, but erroneous, comment alleging "the complete absence of CW as a mode in the table of HF modes" the ARRL submitted. The ARRL has proposed no change to §97.305(a) of the rules, which authorizes CW on all amateur frequencies except on 60 meters.

The League has petitioned the FCC to permit CW and other modes on 60 meters, in addition to the presently permitted upper-sideband SSB.

After studying the topic several years, the ARRL Board of Directors continues to support the principles of regulation by bandwidth contained in the original RM-11306 petition.

“Regulation by bandwidth provides a better regulatory framework, not only for the introduction of future digital emissions but for the protection of traditional narrowband modes as well,” Sumner asserted this week. He expressed the hope that the subset of RM-11306 modifications offers an alternative that “will make it easier for the FCC to move at least part of the way in that direction.”

661. ARRL SAYS KNOW YOUR PRIVILEGES! MISCONCEPTIONS ABOUND REGARDING TECH HF PRIVILEGES

Yahoo group: IndyHamRadio
Date: 2007-03-24 04:57:19 UTC
From: Mark Thompson
Topic: 661 Message: 661

==>KNOW YOUR PRIVILEGES! MISCONCEPTIONS ABOUND REGARDING TECH HF PRIVILEGES

Some Technician licensees who gained new privileges February 23 remain unaware or uninformed as to what they may and may not do on the HF bands, says ARRL Regulatory Information Specialist Dan Henderson, N1ND. In addition to all Amateur Radio operating privileges above 50 MHz, Technicians who never passed a Morse code test now have CW privileges on certain segments of 80, 40 and 15 meters plus CW, RTTY, data and SSB privileges on certain segments of 10 meters. And that's it. "Know your privileges <http://www.arrl.org/FandES/field/regulations/bands.html>,"; Henderson advises all Amateur Radio licensees. He says some Technicians apparently believe their new HF phone privileges go far beyond what they really have.

"Technicians have no phone privileges on any HF band other than 10 meters, period!" Henderson emphasizes. "That's the bottom line. If you want to operate phone on the other HF bands, you'll have to upgrade to General or Amateur Extra class."

A lot of Technician licensees appear to have done just that, according to statistics compiled by Joe Speroni, AH0A <http://ah0a.org/FCC/Licenses.html>. So far in March, the number of General class licensees is up by more than 2700 over the February figure to 134,173, after hitting a 5-year low of just under 131,000 in January. The number of Technicians dropped by 4655 in the same period to 318,838. Speroni notes, however, that his mid-month figures tend to underestimate actual totals.

Most Technician license holders face a learning curve to take advantage of their new CW privileges on HF, but they no longer have to pass a Morse code examination. Technicians also may use their new HF privileges without having to apply for them first. No other license class automatically acquired additional privileges February 23. The "omnibus" rule changes effective last December 15 did not give Technician licensees without Morse code credit any additional privileges either.

Henderson further warns new Techs not to extrapolate additional phone privileges by misconstruing the FCC Part 97 rules to mean something they don't.

"Calls I've been getting lately indicate that some misinformed individuals believe Technicians may operate 'digital voice' on 80, 40 and 15, where they have only CW privileges," he says. "Not true. Digital voice is really digitized voice, and it's not permitted in non-phone band segments."

Henderson reiterates that Technicians do not have FM voice privileges on 10 meters -- or on any other HF band, for that matter.

The HF privileges all Technicians now have are equivalent to those that Novice licensees enjoy, Henderson notes. "This also means the 200 W maximum power limit still applies, regardless of where you operate in the HF bands," he says. Technicians may operate at up to the legal limit on VHF and UHF, however.

On 10 meters, Technician and Novice licensees have CW, RTTY and data privileges from 28.000 to 28.300 MHz, and CW and SSB privileges from 28.300 to 28.500 MHz. "We're sorry that the sunspots aren't favoring 10 meters at this point in the sunspot cycle, but they will in a few years," Henderson allowed.

In addition, Technicians and Novices have CW -- and only CW -- privileges on from 3.525 to 3.600 MHz on 80 meters, from 7.025 to 7.125 MHz on 40 meters and 21.025 to 21.200 MHz on 15 meters.

Henderson believes at least some of the confusion may have originated with a few brand-new or inexperienced Technician licensees who heard that the FCC deleted the Morse code requirement to obtain an Amateur Radio license, but paid little attention to the fine print.

"And we all know the devil's in the details," Henderson says. "Remember, the FCC requires you to know where you may and may not operate and with what modes. Stick to the privileges your license allows or risk hearing from the FCC."

Congratulations Grant

It is just like passing your driving test and having that warm fuzzy felling of achivment.

I remember passing mine back in 1994 and only having a 10 min read of the book on the way over to the test centre (my xyl hogged the book all the way there hi)

I did mine on the spur of the moment for the novice and passed the rest over here in the UK at Memworth Hill

hope to hear you on the air on my next trip over there or on HF

regards

Bob Scaife

Congratulations to all who get their ticket or upgrade.

For those who pass General/Extra it would be nice to
hear you on HF for the Indiana Traffic Net (ITN) that
meets twice daily on 3910 khz, 0830 AM and 4:30 PM
local time or if you are into zulu times 1230Z & 2030Z.

All stations are welcome to check in and become more
familiar with other Hoosiers around the state plus those
who check in from out of state.

If it gets crowded a bit on 3910 the net control may go
up or down a few kilohertz to run this voice net.

Don / KA9QWC

Congratluations, Grant! Welcome to amateur radio.

And, now, a story...

Back in 1990-91, I started getting interested in amateur radio. I had listened to local weather nets on my scanner and thought that was something I'd like to do. I also listened to the net that was activated to support the recovery efforts after the natural gas explosion in an apartment building near Fort Harrison. This all gave meaning and purpose to amateur radio and I wanted to be part of it.

In those "pre-Internet" days, I hung out on Compuserve and some of the local dial-up BBSs. Back then, many BBSs had linked together in a message-sharing system called FidoNet. One of the local FidoNet BBSs was Southside BBS run by a ham with the callsign KB9BVN. Through FidoNet, I got to know Brian KB9BVN, Jack Palladay N9ICE (now a silent key), and several other local hams. Even though I wasn't yet licensed, these guys welcomed me to amateur radio and I learned a lot from them.

In 1991, I finally got my license and I've been active in amateur radio ever since. I am now Skywarn Coordinator and RACES Radio Officer for Hendricks County, so I'm still very much involved in weather spotting and public service work. But it all goes back to guys like Brian, Jack, Mike Wolford N5CEC, Dave Thomas N9FOZ, Mark Musick WB9CIF, and other hams who were my mentors, "elmers" in amateur radio speak.

Grant, there are many facets to amateur radio and a tremendous amount to learn. Seek out hams who have interests similar to yours, listen to how they conduct themselves on the air, and learn everything you can from them. The things you need to know aren't in a study guide or question pool. They are in the minds of guys who have been there, done that. Don't be afraid to get on the air as soon as you get your callsign, but don't ever let the learning stop. And, maybe, somewhere down the road, someone you know will take an interest in amateur radio and you can be an elmer to them.

Bob Burns,

WOW...thanks for the flashback! <grin> The SouthSide BBS was a lot of fun for me to run, and I enjoyed the hams that were faithful users. In 1988 I had just started working for Graham Electronics and Jack (N9ICE SK) and I used to meet at the chinese buffet down on Hanna and Madison for lunch. He worked in the IT dept at Merchant's Bank. One day he said the Red Cross was having a Novice class and we needed to go, so we signed up.

We'd both been active SWL's and we both wanted to get our tickets so we made all the classes and learned 5 WPM CW from guys like Dave N9FOZ, and Dave KA9OOH, and Bernie (can't remember the call) and several other dedicated hams. Jack and I took the Novice test on the same day, we both passed the CW and the written....and we waited for our call signs. Jack got his first for some reason...he was KB9BUT...and he was not happy...I was certain I'd end up with KB9BVD...but got KB9BVN instead.

So the next week we marched down to the testing site and took the Technician written, since nither of us had a HF rig at the time, and we had these cool looking HT's hanging on our belts. Jack passed, I missed it by one. So I went to Greenfield (I think) the next weekend to take it again and I got 100% that time. Jack changed his call and got N9ICE, I kept my original call.

We had a lot of fun working for the Red Cross at the State Fair Concerts for the next three years or so. Mike Wolford N5CEC was a BBS user as well (I think he's down in Spencer now?) and he used to loan Rick KB9NDF and I his 40 foot portable military mast so we could do Jamboree on the Air with my scout troop.

Jack Palladay was a good guy, and one of my best ham buddies. We used to go to all the hamfests together, and the last time I saw Jack was maybe a year before he passed away. He'd been not doing too well and I went over and got him in the car and we hit the Bedford hamfest. Unfortunately I didn't know he had even passed away until about a year after the fact....we'd just kind of lost track of each other. He made Extra way before I did. A good guy.

Your advice to get an elmer, and pick their minds is excellent. No one knows the road better, than someone that has already been down it.

Hi Bob, Brian, & all,

Bob, did you ever try the VHF contest Rover thing? I've been out of action for about a year, but hope to hit the road again soon. I finally got a bigger truck and still working on getting it out-fitted. I'm planning a camping trip / portable expedition for the Indiana QSO Party, and planning a Rover trip for the June VHF.

Enjoyed the reminiscing. I was first licensed in '92 as N9RLA. Back then I used to frequent a BBS in Seymour. I'm still trying to remember the name of it... I still remember how cool it was upgrading to my first IBM XT:-) And how fast my first 14.4 modem was! Anyone remember DOS 3.1? How about the Commodore, or TRS 80? :-) This was about the same time packet was really popular. I used to frequent a packet BBS in Columbus, I think it was Brian's, WW9A. That was fun, but faded away when the Internet became popular back in the mid nineties.

I was first licensed as a tech, then picked up my code a few months later. I upgraded to General a few years later, and a few years after that went back for my Extra. 8-) I haven't been very active for the past couple of years, other than the "new" local 2m repeater. We are trying to organize a new club here in Scott county. But I plan to get back in the game this summer.

73 all & have fun!!
Dan

674. Modified Mobiles???

Yahoo group: IndyHamRadio
Date: 2007-03-26 05:36:43 UTC
From: nascargrant
Topic: 674 Message: 674

I have a question here......If the ham radio I have has been modified can I have frequencies other that ham frequencies programmed into it? For example I wanted to monitor Shelby County fire could I program that into a memory channel. I know the FCC says that once you have a ham license you can transmit any ANY frequency if it's a true emergency. If we are exempt from the scanner law you would think that having public service frequencies programmed into our radios would be ok. Let me know what you guys think here. For example: I pull up on a house fire in Morgantown can I get on there county fire and call the dispatch? I guess there is a fine line there. I would use my Nextel to call 911 before I would ever transmit on a public service frequency if I could. Let me know what you guys do. I just want to make sure I don't do anything wrong here. Thanks.

Grant Ask the below

I have a question here......If the ham radio I have has been modified
can I have frequencies other that ham frequencies programmed into it?

Yes You can put Them in Memory so they will NOT Xmit You May never Xmit on a
Public service Freq, but You will Still get Blamed for any Interference They
claim they have got in the past.

Even if You are a Lic Ham and PD FD Officer You still cannot Use Te Ham
Radio on the Non Ham freqs because the Radio is NOT FCC Type Accepted.

But you can Use a FCC Type Accepted Radio like Motorola for Both.

For example I wanted to monitor Shelby County fire could I program that
into a memory channel. YES receive Only just in Case You Accidentally key
the Mic or Get pulled over By Barney Who will also Illegally key it for You
. You stated ==== I know the FCC says that once you have a ham
license you can transmit any frequency if it's a true emergency.

This is ------------Not TRUE ------------

A Ham I think it was California was camping and Someone Broke their Leg
and He tried His Cell Phone and All His Ham Freqs Nothing worked He did Hear
a Police Dept and programmed up His radio and Called for Help, He Got the
Help but was also arrested and Charged for using the Radio.

If
we are exempt from the scanner law you would think that having public
service frequencies programmed into our radios would be ok.

The Indiana Scanner Law only lets us as Lic Ham radio Operators Legally Have
a Handheld or Mobile Scanner, Or Ham radio cable of receiving that type of
Communications so the answer is Yes but Don?t set it up to XMIT.

Let me know
what you guys think here. For example: I pull up on a house fire in
Morgantown can I get on there county fire and call the dispatch? I
guess there is a fine line there. I would use my Nextel to call 911
before I would ever transmit on a public service frequency if I could.
Let me know what you guys do. I just want to make sure I don't do
anything wrong here. Thanks.

Grant Black

Grant and this is only what I would do, If I Observed a Life and Death
Emergency and I had No other Means to Get Help Except My Modified ham radio
I would call for Assistance. I would take My Chances in a court with Jury

of My peers, I would rather be Tried by 12 then carried By 6 We are all responsible for our own actions, I am by No means trying to Play radio Cop on here, I have Been arrested Here in Hammond Indiana a Few times for Having a Scanner in My veh and I had a valid Ham Lic and Ham Plates on My Car, The reason for the Stop was I Had Police Ants on My Car . I won a $ 8500 Law Suit against the City right after 9-11 , Some PD Officer Do not know the Law and Some Don?t care , My advice in the State of Indiana is to always carry a Copy of the Indiana Scanner Law and a Valid Copy of Your ham License

Sorry for the long Post, I just Don?t want anyone getting in Trouble for Enjoying this Wonderful Scanner Communications Hobby

Happy Scanning

Don KA9QJG

676. Re: [IndyHamRadio] Modified Mobiles???

From: Zack Widup
Topic: 674 Message: 676

Hi Grant,

There is nothing wrong with receiving public service frequencies on a radio that can do so. However, there are several problems with transmitting on those freqwuencies:

1) A radio as a ham unit does not require type acceptance to transmit with it. However, a radio used to transmit on any other frequency requires type acceptance by the FCC. This is something the manufacturer does. If the radio was not intended to transmit on these frequencies and is modified to do so, it does NOT have type-acceptance.

2) If you transmit on those frequencies without authorization or license, you are going to have to prove that it was an extreme dire emergency where lives would be lost if the police/fire were not contacted immediately and that there were absolutely NO other ways of doing so (this includes any people in the area who might have cell phones). This is a very highly unlikely situation. If I didn't have a cell phone I would try to find someone else in the area with one or I'd even use a pay phone or neighbor's phone before I'd transmit on those unauthorized frequencies.

I'd actually be concerned more about #1 above than #2. You could be OK on #2 in some rare circumstance but never on #1. You will get in trouble for that. Your judgment call will have to be if you think the trouble you will get into was worth it.

There is some interesting info on the ARRL EMCOMM 1 Course about using other methods of communication than ham radio in emergencies, including cell phones, landlines, computers and fax machines. I'd recommend this course if you haven't done it.

Grant,

In my State Government job I deal with FCC rules and regs compliance and public safety radio licensing. You would do best to program those frequencies in your radio for RX only and NEVER NEVER transmit on them. You are unlikely to ever encounter an emergency where you could use a public safety frequency and not get in trouble for it. Most all public safety agencies really, really frown on anybody that is not approved by them using their freqs - they will prosecute unauthorized users. Plus, transmitting on public safety frequencies in a non-type accepted radio is illegal.

Also, most public safety agencies in Johnson and Morgan counties are either on the statewide Hooseir SAFE-T 800 MHz system, or are migrating to it. The old VHF/UHF frequencies in central Indiana are being used less and less all the time. So, do yourself a favor and steer clear of transmitting on public safety frequencies.....you'll stay out of trouble and keep your new amateur license.

Wow, brings back memories.

I was first licensed in 1967 when the Novice license was the main entry-level ticket, was one year non-renewable and allowed CW on the 80, 40, and 15 meter bands in small subsegments. Transmitters were required by Novices to be crystal controlled. Any sort of a computer in the home was unheard of. I started out "brass pounding" with a straight key and eventually went to a bug, which I'd inherited from my grandfather who was a railroad telegrapher.

My radios all had tubes (vacuum-state electrostatic repulsion transistors) and I think the output of my Hallicrafters HT-40 was about 40 watts. Novices couldn't run more than 75 watts INPUT then. My receiver was a Heathkit Mohawk desk-crusher. I think you could fit 3 FT1000MP's in that thing!

I got into contesting and DXing at an early age (got my General when I was 15) and never stopped. About 10 years ago I got into VHF/UHF/microwave weak-signal work as well. I'm working on 24 and 47 GHz stations now.

I've only recently gotten into ARES mostly due to inspiration by Pat KC6VVT who is the IL SEC.

This April I'll have my 40th anniversary as a licensed ham.

I remember the days of BBS's and FidoNet very well. We had a large number of hams on the local BBS's and had special files sections for ham software. Those days have passed into "good old days" memories, too. Think of what it was like to have e-mail with no spam! :-)

Thanks to all for the replys. The only reason I wanted to program those in was...The 2-way radio seems to pick up simplex frequencies better than my scanner. Shelby County fire uses 154.160 simplex, and it's hard to pick up the fire units without using a 2-way radio. I will just stick to ham only frequencies in my car. I would rather be safe than sorry. I am looking at local clubs in Central Indiana and most of them have autopatch with membership. I would rather use my Nextel to call in instead. Just about anytime you call 911 the dispatcher asks you personal questions anyways to verify your request. Are there any closed repeaters in central Indiana? I would like to talk on a variety of repeaters, but I don't want to upset anyone for transmitting on there repeaters without being a member of there local club.

My VX6R which I just got a month ago seems to do quite well as a receiver on all VHF-UHF frequencies. It is not anywhere near the performer on HF that my TS-850 is, even with a good HF antenna attached, but I kind of expected that. It does OK though for what it is. It's a lot more portable than the 850!

I used it the other day to help tune up a 106.5 MHz oscillator. Having the wide coverage receiver can come in handy for unexpected uses.

Grant, using the cell phone for calling the police/fire is a better idea than using your radio. First of all if you dial in to 911, they are expecting your call. If you break in on a freq they have no idea who you are, or if what you are reporting is true...this may delay response. It could make a bad situation worse. The FCC will hammer you financially when you get caught, and you can kiss your newly earned ham ticket good bye.

I think most of the repeaters in Marion and the surrounding counties are open repeaters, a lot of them have autopatch codes for folks that actually pay for the access. Go to the W9ICE website and you will find a map of the Indiana counties with the repeater freqs and PL tones for a system in every county. These are typically used for Skywarn and severe weather nets. Good info to have.

Welcome to the hobby Grant! If you're interested in learning CW let me know and I will mail you a CD with a real good code tutorial.

684. Question for ARES/RACES/Skywarn people

Yahoo group: IndyHamRadio
Date: 2007-03-27 01:47:54 UTC
From: Robert Griggs
Topic: 684 Message: 684

Hello Everyone. I just got off the phone with Jim Pickett, N9EYG Henry Counties Skywarn coordinator. He told me that he talked with Dave from NWS at our skywarn training and he is looking for people from east central Indiana to participate in the CoCoRaHS program. More Info about the program can be found at this website HYPERLINK "http://www.cocorahs.org/"http://www.cocorahs.org/ . He said if there is enough interest that they can get a training class setup for everyone to attend. You do NOT need to be a ham to be in this program. So the general weather enthusiast can participate. I think this is a valuable program to the NWS and general public. Please check the website out and let myself or Jim Pickett, N9EYG know if you are interested in this program and we will get with NWS INDY to setup a class in east central Indiana. Please pass this email along to your ARES/RACES/Skywarn people and to your local EMA/EMS/FIRE/POLICE agencys to get support for this program.

Thanks,

Robert Griggs, W9MKA

HYPERLINK "mailto:W9mka@..."W9mka@...

Grant,

I think you were given excellent advice on this subject, but wanted to put in my 2 cents also...

There are rules that deal with ham radio, law enforcement and other agencies around the country. As you were advised it is best to comply with those type of instructions. We as amateur radio operators vary in character and practice. There are good operators and a few bad apples out there. Additionally when it comes to a letter of the law there are many shades of gray in practice or enforcement depending upon the department and location.

As related to me by a EMT/ham a few years ago they got in a bind during a ambulance run and could not communicate with the hospital. Sounded like it was a legitimate reason when the EMT's handheld ham HT could reach the law since the primary communications source was not functioning.

Soon after wards not sure if it was a day later...but 2 enforcement types showed at his home front and demanded the HT. No amount of explanation could convince them to take any other course. In the end it turned out the EMT got the radio back but there was some periods of grief to deal with along with some confusion within law department.

A second situation I noted in another county was entirely the opposite & one of the local hams was apparently given local permission to use the law enforcement frequency even though illegal FCC wise on the type.

A third situation which became more of a concern was a ham being pulled over who tried to explain his modified mobile rig but was totally ignored. The enforcement person probably stepped over the line a bit and tried to get the ham mobile unit to transmit on the LENF frequency. In other words he did not care about the receiving capability - but made verbal threats if it did transmit on the law frequency he was going to cite the ham. In the end it came out the radio could not be made to transmit illegally to the satisfaction of the officer.

So even by carrying a copy of the scanner you can see someone got hassled a bit. That enforces some of the replies you received earlier about making sure your radio does not transmit illegally.

I tried to relate these events cited above correctly as originally told and if anything was missed to make certain it was understood my writing capability does not come with a degree. I know of a few other incidents over the years, some which gave ham radio a bit of a black eye in regards to officials.

Anyway Grant have fun and enjoy the familiar aspects of ham radio.
Again, sounds like the posts made on this topic gave you great
advice.

Grant, you've received some good input. I am not an attorney, though I'd like to weigh in with some legal references and some thoughts.

At 01:36 AM 3/26/2007, nascargrant wrote:
>If the ham radio I have has been modified can I have frequencies >other than ham frequencies programmed into it?

In Indiana, I believe you are within the law to do so. You can read Indiana's "scanner law", IC 35-44-3-12, for yourself at http://www.in.gov/legislative/ic/code/title35/ar44/ch3.html. Note how "police radio" is defined. Note what acts are prohibited by this statute. And note that some prohibitions in this law do not apply to FCC-licensed amateur radio operators if they are "not transmitting over a frequency assigned for police emergency purposes". In other words, Indiana's law allows amateur radio operators to possess a mobile or portable radio that can receive police emergency frequencies, but they may not transmit on those frequencies.

Also, bear in mind that each state with a scanner law has slightly different wording. What may be legal in Indiana may not be legal in another state or may be overruled by a county or municipal ordinance.

>I know the FCC says that once you have a ham license you can >transmit any ANY frequency if it's a true emergency.

Careful. Here's what Title 47 of the U.S. Code of Federal Regulations Part 97.403 says about that: "No provision of these rules prevents the use by an amateur station of any means of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication systems are not available." I think the key phrase here is "when normal communication systems are not available". If you can make notification to public safety via a cell phone or some other means of communications, I don't think Federal law permits you to transmit on public safety frequencies.

When I first got into amateur radio, I was all about modifying radios for out of band transmit. I even sent off to a guy in England to get modification instructions for a particular radio. This was before much of this information was available on the Internet.

I used to have a Yaesu FT-530 dual-band handheld. I modified it for out of band transmit and had several area police and fire frequencies programmed into the radio. One day, my car was broken into and that radio was stolen. What kept running through my mind was that a thief now could monitor police radio traffic and, worse, could interfere with them.

That incident changed my mind about modifying radios for out of band transmit. I just don't do it.

Those are some great references, Thanks Bob.

Oh, and thank both you and Brian, for saying NICE things about me --- that doesn't happen very often!

Something came to mind as I was reading Bob's response. Many emergency services do NOT want us to "interfere" with their procedures.

Several weeks ago I was doing some work at a fire station in Hendricks County. Having once lived in that particular community, I asked about the relationship with the ham radio operators in the area. The response --- "Those folks are a bunch of weirdos, and we try to stay as far away from them as possible."

Needless to say that I was stunned. Somebody, at sometime stepped on this departments toes really bad. That relationship needs some TLC, no a LOT of TLC!

I suppose that what I am trying to say is that Amateur Radio is a wonderful hobby --- to us. It is NOT the holy grail of communication, and there are organizations out there that will resent us forcing ourselves upon them. As in jumping in on one of their assigned frequencies.

All that we can do as amateurs is to stay prepared, and hope that our talents never become necessary.

690. Screwdriver Antenna Mount : Anyone use one on a truck??

Yahoo group: IndyHamRadio
Date: 2007-03-28 01:15:35 UTC
From: n9mox
Topic: 690 Message: 690

I been thinking about putting HF in my Chevy Avalanche. I would probably go with a screwdriver antenna. It appears that most pickup truck owners go with a hitch mounted arrangement with a mast extension to clear the top of the tailgate. Interaction of the coil of the screwdriver style antennas and the metal body of a truck tailgate (or body) appears to degrade performance.

The Avalanche actually has a tailgate that is a composite material with a metal internal frame. Perhaps the interaction wouldn't be too bad.

Some of the tailgate hitch mounts I have seen use a pivot so the tailgate can be easily opened without removing the antenna. There are no stake pockets on the Avalanche so that isn't a possibility.

Has anyone seen and Avalanche with a mount?? I have a full cladded version so the rear bumper is wrapped in plastic.

Just curious to see what works well and might even look good.

97.403, 97.405(a)and(b) says Stations in distress should use any means at their disposal to attract and obtain assistance. This includes operating on frequencies and equipment for which they are not licensed.

Here is a question on the Tech exam.
T8B11
(Question)When can you use a modified amateur radio transceiver to transmit on the local Fire dept. frequency?

(Answer)
In a genuine emergency you may use any means at your disposal to call for help on ANY frequency.

97.403, 97.405(a)and(b) says most radios are only permitted to use TYPE ACCEPTED radio equipment that is certified to meet the standards for that service. Amateur Radio equipment is not certified for use on any other service and should not be used EXCEPT in the case of emergencies with a threat to life and property.

I realize that having other frequencies programmed in your radio might not be a good idea, However the FCC says you can transmit on any frequency if you need to. Like I posted before I would always use my Nextel to call 911, but in the case that I have no signal in a particular spot the FCC says we can communicate via our modified radio to call for help.

I have a VX-6 and the instructions in the book tell you how to program frequencies in memory. See pages 34 and 35. You can program any frequency between 500 kHz and 999 MHz (excluding cellular frequencies) into the memory. You can only transmit on the ones that are in the 2 and 1.25 meter and 70 cm ham bands.

I have the local AM stations, local FM stations, some of the local public service frequencies and all the local TV audio frequencies plus about 40 shortwave frequencies programmed into mine. Plus all the local repeaters and more commonly-used simplex frequencies.

I was looking for a way to program them in without being able to transmit on them. Just program in the frequency like normal and then set it up for a odd split reapeater frequency. So in case it transmitted on it transmits on like 145.600 instead. Just in case I ever get pulled over they can't transmit on it and pull up their repeater.

That's the way I'd do it. With Yaesu handhelds, it's usually a matter of programming the receive frequency and then entering a transmit frequency (such as in the ham bands). Look for a section in the manual that talks about entering repeater frequencies with an odd split.

On my Yaesu FT-60, you select the receive frequency, press and hold F/W for one second, select the memory channel, press F/W again to save the receive frequency to the memory, select the transmit frequency, press and hold F/W for one second, select the same memory channel that you used for the receive frequency, press and hold the PTT (the radio does not transmit while doing this), and while holding PTT, press F/W to save the transmit frequency.

>Just in case I ever get pulled over they can't transmit on it and
>pull up their repeater.

That's why an unmodified radio is safer. <wink>

The stock VX-6R will not transmit outside the ham bands. If you've modifiied it in some way so it will, the operating manual on page 34 tells you how to do this. I just tried it. I set it up to receive on 453.150 and transmit on 146.520. Before, if I keyed the mic on 453.150 I'd get a pair of beeps and an "ERROR" message in the display window. Now it transmits on 146.52.

Not sure about the FT-7800.

699. AC Hum

Yahoo group: IndyHamRadio
Date: 2007-04-01 15:16:17 UTC
From: Don West
Topic: 7 Message: 699

Ham Radio Wizards,
I have understood the theory of ground loop hum, but have not had much luck in the practical application of the theory. (Other than running an 8 ga. wire to ground from every device in my shack, argh!)
I am picking up a hum on the transmit of my Yaesu FT-1500M, which I use for voice and packet connection to the DX Packet Cluster. I have had it for some time, but am starting to use it more for voice and would like to get rid of it.
I have my data input on the radio connected to my Kantronics KAMPlus. I thought the hum was coming in through a wall wart. (The adjustable voltage wall wart has a high DC voltage on it, so I got rid of it, but that did not eliminate the problem.)
The KAM is connected to my computer serial port. When I disconnect the serial cable from the computer the most annoying hum goes away. (There appears to be a much smaller hum that appears when I power the KAM from my 12v power supply. This seems strange, as both the 2 meter rig and the KAM are connected to the same power source, hmm?)
My first thought is to run a ground line from the computer case to the KAM, but I would like to hear opinions of others who may have been more successful in dealing with this issue than I.

73,
Don, W9DEW
the Ground Loop Dummy

You are going to make me stretch some memory cells here --- it's been nearly 10 years since the N5CEC BBS!!!

First, yes --- include grounding both the case of the TNC and the case of the computer along with the rest of the equipment.

Second --- be careful here --- take your volt/ohm meter, use the VOLTAGE scale first (this just protects the meter). Place the leads between the ground on your wall plug and the equipment ground (the lead that goes to the ground rod. If there is ANY voltage here, you have a problem with the house wiring --- call an electrician!

Assuming that you did NOT see any voltage during the test above put the meter on the OHMS --- the resistance should be ZERO (on every scale). If it is not, then your house ground and equipment ground need to be bonded together.

I am sure that there are folks around that are more of an expert than I am, but as a rule of thumb --- everything must be connected to a common ground. When it isn't, there can be a difference in potential between the (two or more) ground rods, allowing current flow --- usually heard as a hum!

Hope this helps!

Mike (N5CEC)

Don, I think I would check the ps by using a VOM and set it for AC and see if you have some from the ps. I'm no technical guy either, but maybe that would show something (if you haven't already tried it). Also you might check the outlet. I had a friend who had a hot water heater quit due to too much voltage on the ac input. Just dumb thoughts, as in just in case. It would be weird for it to come out of a serial port as I've never seen or heard of that and I have had tnc's hooked up to a pc for at least 15 years. But, never say never, right? Good luck on getting things fixed.

Subject: [IndyHamRadio] AC Hum

Ham Radio Wizards,
I have understood the theory of ground loop hum, but have not had much luck in the practical application of the theory. (Other than running an 8 ga. wire to ground from every device in my shack, argh!)
I am picking up a hum on the transmit of my Yaesu FT-1500M, which I use for voice and packet connection to the DX Packet Cluster. I have had it for some time, but am starting to use it more for voice and would like to get rid of it.
I have my data input on the radio connected to my Kantronics KAMPlus. I thought the hum was coming in through a wall wart. (The adjustable voltage wall wart has a high DC voltage on it, so I got rid of it, but that did not eliminate the problem.)
The KAM is connected to my computer serial port. When I disconnect the serial cable from the computer the most annoying hum goes away. (There appears to be a much smaller hum that appears when I power the KAM from my 12v power supply. This seems strange, as both the 2 meter rig and the KAM are connected to the same power source, hmm?)
My first thought is to run a ground line from the computer case to the KAM, but I would like to hear opinions of others who may have been more successful in dealing with this issue than I.

I wondered about the power supply, too. Checking for AC voltage on its output, especially as you vary the load on the power supply, might reveal that the power supply is not filtering or regulating its DC output very well. An oscilloscope would be a better tool for this test, but you have to use the tools you have at hand.

Hi Bob,
Thanks for the advise. If I still have the hum even if the PS is disconnected from the KAM and the serial cable is connected, but it goes away if I disconnect the serial cable, wouldn't that rule out the PS as the source?

Thanks & 73,
Don

Hi Mike,
Thanks for the advise. I have not detectible voltage from the RF Ground to the AC ground. I do, however have some small ohm reading. The KAM is probably not grounded to anything at this time. The Computer is grounded only to the AC ground. I will ground them both and see if that eliminates the problem.

You are going to make me stretch some memory cells here --- it's been nearly 10 years since the N5CEC BBS!!!

First, yes --- include grounding both the case of the TNC and the case of the computer along with the rest of the equipment.

Second --- be careful here --- take your volt/ohm meter, use the VOLTAGE scale first (this just protects the meter). Place the leads between the ground on your wall plug and the equipment ground (the lead that goes to the ground rod. If there is ANY voltage here, you have a problem with the house wiring --- call an electrician!

Assuming that you did NOT see any voltage during the test above put the meter on the OHMS --- the resistance should be ZERO (on every scale). If it is not, then your house ground and equipment ground need to be bonded together.

We are talking about the power supply that runs the radio, correct?
Can you describe that power supply? Make? Model? Current rating? What
radio are you using?

Most 2m mobile radios draw about 1 amp in receive mode and as much as
15 amps when transmitting at full power. If your power supply isn't
capable of delivering the current that the radio requires while still
properly regulating and filtering the output, then it might be the
source of hum on transmit.

Do you get the hum when transmitting voice with this radio and power supply?

From: Mark Thompson
Topic: 710 Message: 710

I have a new VX-150 5-watt 2m FM HT for sale. It has never been taken out of the box so it is just like buying new from a dealer with warranty card intact.

Information & a description about the VX-150 can be found at:

http://www.yaesu.com/indexVS.cfm?cmd=DisplayProducts&ProdCatID=111&encProdID=SnUxsyxpdj8%3D&DivisionID=65&isArchived=0

The average dealer selling price for this model seems to be around $120. If interested and want to make a reasonable offer please contact me off-list at either my email address or call me at my mobile # at 847-867-2774.

73, Mark, WB9QZB

Take a wire 246 feet long, divide it in the middle and feed it with
ladder line. Raise it as high, and as flat as possible. Run the ladder
line to a tuner and have fun!

The good ol' dipole. Very cheap, very efficient.

Yes, that is a good antenna. I have used dipoles around 130feet (in length) or so fed with twin lead for years. I didn't care for it on the higher bands, but of course right now, the low bands are where the action is. I was just thinking of a solution that didn't involve a manual tuner for some one new to hf. But, you've got to learn sometime, right? And it doesn't hurt to put extra money in a good tuner. Especially if some day you want to use an amp.

Has anyone used 600 ohm line, like W7FG? It's supposed to not need retuning, or not much, when it gets wet. I have always used the 450 ohm feedline and wonder if the line he sells performs better then the 450 ohm line? Anyone remember Lew McCoy W1ICP who used to write antenna articles for CQ magazine. I believe he's an SK now, but I'll never forget his article about this particular antenna and he said not to worry about any exact length, like the G5RV. And he said if it was 102' it was a G5RV, if it was anything else it was the "Real McCoy". I really enjoyed his articles as Lew always seemed like a down to earth guy, not some know it all. Sorry about all the extra bandwidth here.

The biggest thing I question with that antenna is 70 feet on 160 meters. Yes, they appear to have large loading coils, and it might be great. I checked Eham reviews and there are not very many on Spiro antennas. I guess when it comes to wire antennas, I prefer to build it myself. I guess I'm too picky.

Bill:

The Spiro antenna is shortened with loading coils. It's efficiency will be reduced on 80 and 160 Compared to a full sized antenna. Although this would be a good compromise for situations where space does not permit a full sized antenna.

If you need to shorten the antenna, the wire does not have to be straight over it's entire length.

All in all, the easiest way to get continuous coverage on all bands is the dipole that Dan K9ZF described. Make it yourself and use your money for a good manual tuner. Later you can get a vertical such as a Butternut or a Titan and use the dipole for 160 and 80 meters.

Beware of any antenna that claims a low SWR with no tuner over the entire range of 2 to 30 MHz. These are dummy load antennas and in my opinion are bogus. They use a resistive match that wastes most of your power. The Spiro is NOT a resistive match antenna. If you purchase an antenna, let us know what you have chosen first and we can warn you if it is a bad product.

Subject: Re: [IndyHamRadio] hi all

Yes, that is a good antenna. I have used dipoles around 130feet (in length) or so fed with twin lead for years. I didn't care for it on the higher bands, but of course right now, the low bands are where the action is. I was just thinking of a solution that didn't involve a manual tuner for some one new to hf. But, you've got to learn sometime, right? And it doesn't hurt to put extra money in a good tuner. Especially if some day you want to use an amp.

Has anyone used 600 ohm line, like W7FG? It's supposed to not need retuning, or not much, when it gets wet. I have always used the 450 ohm feedline and wonder if the line he sells

performs better then the 450 ohm line? Anyone remember Lew McCoy W1ICP who used to write antenna articles for CQ magazine. I believe he's an SK now, but I'll never forget his article about this particular antenna and he said not to worry about any exact length, like the G5RV. And he said if it was 102' it was a G5RV, if it was anything else it was the "Real McCoy". I really enjoyed his articles as Lew always seemed like a down to earth guy, not some know it all. Sorry about all the extra bandwidth here.

Take a wire 246 feet long, divide it in the middle and feed it with
ladder line. Raise it as high, and as flat as possible. Run the ladder
line to a tuner and have fun!

The good ol' dipole. Very cheap, very efficient.

Don,

Sounds like a ground loop to me.....I bet the KAM is ran from a wall wart power supply that, because it's a transformer, doesn't have a ground pin on its AC plug. I'd bond the computer, KAM, and rig together and see if that gets rid of the hum.

We are talking about the power supply that runs the radio, correct?
Can you describe that power supply? Make? Model? Current rating? What radio are you using?

Most 2m mobile radios draw about 1 amp in receive mode and as much as 15 amps when transmitting at full power. If your power supply isn't capable of delivering the current that the radio requires while still properly regulating and filtering the output, then it might be the source of hum on transmit.

Do you get the hum when transmitting voice with this radio and power supply?

Bob...

Hi Alex,
That is what I think that I suggested several days ago.
Once upon a time, I had four (yup 4) KPC-2's on line at the same time.
Two on 2 meters, 1 on 220MHZ, and 1 on HF, getting everything to settle
down and operate in the same room was quite an experience. Grounding
everything to everything is the best first step.

But then, I've slept since the N5CEC packet BBS was on the air --- sigh,
that was nearly 10 years ago...

Mike (N5CEC)

I can think of maybe one more thing to try that might have already been mentioned. No guarantees of course, but how about getting your power for your Kam with the power supply? I used to do that all the time because my packet elmer said he had ran into too many wall warts that caused a hum, and always ran all of his tncs from a power supply.

Sorry if someone has already gave you that idea.

Grant,

With the large increase in testing sessions after Feb 23 & larger than normal numbers of candidates at already scheduled testing sessions, the VEC's are working through huge backlogs. Normally, we mail our session paperwork to the ARRL/VEC over the weekend & the licenses would hit the FCC database on Tuesday or Wednesday. The session we held at our hamfest on March 10 was not posted until March 22.

The ARRL/VEC has added extra staff to help cope with the workload, but are still working nearly 2 weeks behind. They are currently telling their VE's not to inquire about a session until at least 15 days after the session paperwork would have been received by the ARRL. Since it has only been 2 weeks, your session should be processed soon. My guess is that your license should show up "any day now".

Patience.....

Don,

Ah yes, time....something that always seems to be in short supply. I guess that's why my Swan 350 is still in pieces and my Collins 51J3 sits unrestored (and hence my vintage AM station inoperable). I just got back on the air on 2m yesterday after 1 year SK.......I need to put the mobile in the new car and really get back on. When the sunspot cycle comes back up, I've even got a 10m all mode to put in the car as well. Anyway, I'll be monitoring the 146.76 repeater on my ancient Wilson portable.....I've got it here at the office for severe weather. That frees up my good VHF/UHf portable for back at home use.

Well, so much for my ramblings.

Does anyone have a service manual for a Yaesu FT-1000?

I'm looking at a FT-1000 that the main receiver hears only very strong signals. The auxillary receiver works fine.

Anyone seen this problem before?

I have a signal generator coming where I can inject a known signal level and trace through the RF section.

The ham that owns this rig may have transmitted directly into this rig using another rig with its own antenna.

Topic: 741 Message: 741

Indiana Hams,

Because I am a DORK [:-B] and do not know the difference between
a Yaesu FT-847 and a Yaesu FT-857, you 847 owners have an oportunity to
own the programing cable and software for FREE! YES, You read that
correctly. I said FREE (plus shipping and handling, aplicable taxes,
licence fees, registration, destination and dealer prep).

And if you order before midnight, April 8th, 2011, I will waive all
the fees except the shipping. [:O]

Offer good only while supply (1) lasts. Contact me right away at:
don-west@... <mailto:don-west@...> .

73,

Don, W9DEW

From: Don Evilsizor
Topic: 740 Message: 746

Don,

Glad U got the hum resolved finally and that should bring a few
smiles to your face on that project. I had somewhat of a problem
some years ago with the din cord for the ICOM-735 & 726 going
to the interface unit and the KAM. It turned out the hum was due
to one of the pins on the din cord.

I enjoyed the KAM unit and using it on my old Commodore 64 to
show off a bit running 3 QSO sessions at a time. That is running
RTTY on HF and 2 VHF packet contacts in front of some ham
visitors who were getting interested in doing packet.

Also Don it was good to meet you at the recent Columbus hamfest
along with many others who also get on the Indiana Traffic Net each
day. So many I never met before and trying to picture what they
look like can turn out to be surprising.

747. Handheld radio question....

Yahoo group: IndyHamRadio
Date: 2007-04-08 14:18:14 UTC
From: ROY & MARY PICKETT
Topic: 747 Message: 747

Me and my wife want to keep in contact with each other when we are appart.. My question is : Can a handheld hit a repeater 15 miles away if your on a hill , and there are alot of trees between you and the repeater ? I would be in english indiana and she would be in paoli..At most she would be within a few miles of the repeater sence it is in paoli. We live in a area where cell phone is scarce sometimes . In between english and paoli about 75%+ has no cell phone service. Even no cell phone service wouldn't mean no ham radio service right? In this situation , what handhelds would you recomend that would do this that wouldn't cost a arm and a leg because we are both disabled..

Thanks
Roy

I live in Franklin and I have no problem hitting repeaters in other counties. I have a Yeasu FT-6R and I love it. It does 5 watts on 2-meter and 440. 5 watts is about the best you will find. You could try a high gain HT antenna. Several people make them. I would say that if you are on a hill and the repeater has a decent receive you would be able to hit it with a HT. The bad thing about Ham Radio and repeaters is that it is trial and error. You will just have to try it. Having an HT is always a good thing. You never know when you will need it. Cell phones are a good reliable source of communication until something major happens. Having an HT with a spare battery pack might save your life on of these days. If I lived closer to you I would let you use my HT's to try in your area. Hope this helps.

Hi Roy

There are a lot of variables with what you are wanting to do. 15 miles to a tall repeater should be no problem. However you would need to find out what repeaters you would have between you and your wife and see how tall they are, and talk to hams in your area and find out. You are located pretty far from me, as I'm in Anderson, IN (about 30 miles NE of Indy). We have 5 repeaters in this area, but I honestly don't know if any are high enough for reliable communications at 15 miles with an HT. However, you may be in an area where that it is quite easy. Really the only way to be sure is to talk to hams in your area as to what you are trying to accomplish. For instance our club's local repeater is good for around 10 miles if you are outside and standing in the right spot. As far as the other 4 go, I'm not sure. We are only at 150' on top of Community Hospital here in Anderson. The taller the repeater antenna, the better the coverage. I would talk to the hams in your area and see what is available, and ask them the same questions you have asked here. It would be nice if some of them are on this group and can answer your questions. Best of luck...

73, Mike K9MI

Topic: 747 Message: 750

Roy,

Foliage loss is not that great at VHF frequencies (2m), so I don't think the trees would be that big of a problem. I would either buy or make yourself (extremely cheap) a J pole antenna out of copper tubing and have someone mount it on your gutters, on a push up pole, or somewhere else on your house. You could run the coax in through a window to your HT and would never have to worry about not hitting the repeater. A 2m mag mount antenna would probably also work, but not as well as the bigger J pole. You can look up instructions on how to make one in the ARRL handbook, or on the internet.

If your repeater in Paoli's up high, it'll be easy to hit, especially if it has a hot (sensitive) receiver. I used to routinely get into the 146.76 repeater on the east side of Indianapolis with an HT hooked to a mobile antenna on top of my pickup truck 25 miles away. The 146.76's antenna is up 450', so that helps, but you get the idea.

Here's a link on building one:
http://www.alpharubicon.com/elect/jpolejaden.htm I think the way he put on the connecter is a little weird....it's not very weather proof, but you could get some vapor wrap from your local ham radio supplier and make it weather proof. Vapor wrap is this sticky putty that you put around a coax connection that's going to be out in the weather. You put on the vapor wrap, then wrap it with electrical tape, then paint it with Scotch Lock, a sealant made by 3M.

I hope this helps.

Very 73.....best of luck to you getting on the air.

I can attest to the copper j pole being a good home antenna. I have built dozens and they always work.

I have one stuck in the ground in my backyard now. I am 10 miles south of Indianapolis, and with 5w from my FT2600 (mobile being used as my base), I can hit the 146.700 full quieting...about 35 miles away. I can also hit Martinsville (Wilbur) full quiet and it's about 40 miles away.

I would suggest you pick up a cheap 25w mobile 2m rig and mount it at the house with the J pole. With 25w I would suspect you'll have no issues hitting Paoli...unless the terrain between you and it is absolutely up and down.

HT's are funny things, and at low power you need to make sure you have a great antenna, especially in hilly areas. You need every milliwatt it can muster.

What's the typical power out on a HT these days? 5w or is it typically less?

On my J Pole, I took a 50 foot run of coax and put a connector on the rig end, and just hose clamped and soldered the shield on one side o fthe J pole, and the Center conductor on the other side. Not as handy when you need to change out the coax but it works great.

If you want a picture, let me know. I'll send one.

Roy,

I think you were given some good thoughts by posts previous to mine concerning your situation on communicating with your wife.

I will echo the favorable comments in regards to using a J-pole antenna too. My experience on building a similar one cited in URL example brought me good results and about a simple as they come to build. I agree with one of the responders that the SO-239 connector seems weird but have seen it done numerous times.

I usually put my SO-239 in between the 2 elements and run a bare copper piece of common house wire type to each element and bend the wire down and use hose clamps to hold it down. Additionally one can adjust some by loosening the hose clamps to slide up or down as desired.

One can find all sorts of J-Pole antenna projects out there on the web with some using either 300 or 450 ohm lines too. But think the references made in the emails here should serve you well.

Good luck.

Don / KA9QWC

753. SKYWARN Info

Yahoo group: IndyHamRadio
Date: 2007-04-10 04:30:43 UTC
From: Grant Black-KC9LGZ
Topic: 753 Message: 753

I attended the SKYWARN class in Shelbyville tonight. I though it was something kind of like a certification class. There were people of all ages and only a couple of the 30 or so were Ham Radio operators. I went because I wanted to become a certified storm spotter and contribute to a local net and be able to relay the proper info. Does the National Weather Service issue unit number or spotter numbers anymore? I remember several years ago seeing people with a SKYWARN badge that displayed there call sign and spotter number. One of the vans there was equipped with SKYWARN decals and plates all over it. I guess it would be nice to have a small decal to display your volunteer efforts to save lives. By attending that session do I automaticly become a certified skywarn spotter? I am confused here. I learned everything I needed tonight to be able to relay the proper info, but I assumed there was some type of certification. Any help would be greatly appreciated.

>numbers anymore?

No, though NWS does keep records of who has been through spotter training. I don't know why they stopped issuing cards, but I suspect that being a government program, they didn't want the appearance of being exclusionary. On the other hand, if you sign up for the eSpotter program (http://espotter.weather.gov/), they usually check to see if you've been through training before granting access.

>I guess it would be nice to have a small decal to display...

The NWS, like most government agencies, continually faces budgetary issues, so the cost of printing Skywarn decals was trimmed from the budget long ago. There are organizations who print Skywarn decals and offer them for sale for a nominal fee. Try a Google search.

Grant, with the SKYWARN program here in Madison County, you have to attend a class ever other year to stay certified. You probably have a leader in your county that keeps track of who has been and who hasn't. I imagine it's the head of our EOC or the Communications Director who maintain that information here. I don't know what county you are in, but you need to find out who is the head of SKYWARN/Emergency Communications in your county, and let them know you have gone through the class and are available when needed.

Does the National Weather Service issue unit number or spotter numbers anymore? I remember several years ago seeing people with a SKYWARN badge that displayed there call sign and spotter number. One of the vans there was equipped with SKYWARN decals and plates all over it. I guess it would be nice to have a small decal to display your volunteer efforts to save lives. By attending that session do I automaticly become a certified skywarn spotter? I am confused here. I learned everything I needed tonight to be able to relay the proper info, but I assumed there was some type of certification. Any help would be greatly appreciated.

Does anyone know of a weather spotter class that will be held here in central IN anytime soon? I've been a ham since 1994 and have never had the training. Something on the South Side or in Johnson County would be best.

No, though NWS does keep records of who has been through spotter training. I don't know why they stopped issuing cards, but I suspect that being a government program, they didn't want the appearance of being exclusionary. On the other hand, if you sign up for the eSpotter program (http://espotter.weather.gov/), they usually check to see if you've been through training before granting access.

>I guess it would be nice to have a small decal to display...

The NWS, like most government agencies, continually faces budgetary issues, so the cost of printing Skywarn decals was trimmed from the budget long ago. There are organizations who print Skywarn decals and offer them for sale for a nominal fee. Try a Google search.

The scheduled talks for the remainder of the spring can be found here:
http://www.crh.noaa.gov/ind/spotter.php

Indy used to have an online version of their talk, but I'm not sure where it ran off to. If you can find enough interested people, and a place to hold it, the NWS would most likely come give a talk. The WCM there takes his job very seriously and I think they do a swell job of making sure those who want training get it.

For next year, you might also consider the symposium that the Indy office will host (I believe that is the plan). In odd-numbered years, IMO Skywarn hosts a day-long advanced spotter seminar up in Elkhart, which is always very informative.

Our local ARES keeps track of who attends the spotter training programs. I went to the basic spotter seminar this year and ARES had a separate sign-up sheet beside the sign-up sheet that the NWS had.

No certificates, cards or numbers were given out by NWS but I understand they do keep record of who was there.

I didn't get to attend the advanced spotter seminar but I downloaded the booklet for it from the NWS website and studied it. I heard that they DID give some sort of certificate for people in this area who attended the advanced spotter class.

We had a follow-up discussion at the next ARES meeting about our own spotter coordination procedures if spotters are needed. So we're all set; I just hope we don't have any severe weather to spot!

> Grant, with the SKYWARN program here in Madison County, you have to attend a class ever other year to stay certified. You probably have a leader in your county that keeps track of who has been and who hasn't. I imagine it's the head of our EOC or the Communications Director who maintain that information here. I don't know what county you are in, but you need to find out who is the head of SKYWARN/Emergency Communications in your county, and let them know you have gone through the class and are available when needed.

Greg,

Well, 13 years of being licensed, and I've never been able to catch one of these. I guess I'll review the booklets that had links posted to them. I've never been able to figure out why they don't hold these in April and May, and at some time when they could be attended without getting up at O'dark thirty on Saturday morning. I was sidelined all during February and March and unable to drive due to a leg injury, so I missed this season (again).

I wonder if NOAA has ever thought of doing the classes online, so that they could be done anytime.

Well, enough of my complaining. I'll still be on 146.76 when the weather gets bad.

The idea behind holding them at the end of the winter is that if you wait til May to do the training, you're already well into the convective season. Training the spotters right before severe weather starts allows them to participate all season long. Doing it in, say November, is the worst though. We had a Skywarn talk in November back in my student days and after it was over, I was itching for severe weather...but I had to wait months. Oh the humanity!

> they could be done anytime.

Last year, one of the staffers at the Indianapolis office put together an online slide show based on the live spotter talks that Dave Tucek, the Warning Coordination Meterologist, gives. You can find it at: http://www.crh.noaa.gov/ind/INDSpotter/player.html

Also, I've been collecting Skywarn training info for posting on the Central Indiana Skywarn web site. It's a little sparse right now, but as I add links and info, it will be posted at: http://www.w9nws.org/training

Bear in mind that the local spotter talks given by the Indianapolis office are presented by basically one person. Most of those talks are in the evening or on Saturdays, so Dave gives up a lot of time outside of normal working hours to make these presentations. With something like 39 counties to cover, he's a busy guy in February and March because most of the counties like to offer these sessions just before the spring storms hit.

Also, bear in mind that different counties organize their Skywarn programs differently. Madison County has a good program and is, in my opinion, the model for county Skywarn programs. They stress training and certification and they have a well-defined spotter pre-plan which puts people in the right places to cover the county.

Congratulations to both of you, Roy! If you are just wanting 2 meter only handhelds, there are a few to choose from at R&L for $150 or under, go to http://www.randl.com/cgi-local/cart/cart.cgi?cart=Search&groupnumber=(50) to view them. If you are interested in dual band (2m and 440), there are a few listed, but they are low output power units. You can always check some of the used radio listings at QRZ.COM, eham.net, and of course, e-bay.

Again, congratulations!

Good job you two!!

Ham Radio Outlet has about 5 different models of 2m HT's, brand new in the box, for under $140 right now.

Several Models come to mind:

Alinco DJ-196T - 2m, 5W, 41 memories, CTCSS/DCS for $130

Icom V82 - 2m 7W, battery and charger for $129.95 plus Icom has a $10 coupon

Kenwood TH-K2AT, 2m, 5W, with battery and charger $139.95

Yaesu VX-150/64B 2m, 5W, 199 memories, $117.95

Lot's more under $150 each

I was looking around for some more rig options for you this morning, and I found another one you might consider.

The Yaesu FT 1802M

This is a 2m, 50w rig, with extended receive (136-174 Mhz), built in 10 channel Weather Memory Bank for all the NOAA stations with Waether Alert that will signal you if there is a warning, 221 memory channels, power can be set to 50W/25W/10W/5W, CTCss/DCS encode/decode, all for $125 right now at Ham Radio Outlet. http://www.hamradio.com

You could use that as nice base unit at home, coupled to a copper pipe J-Pole. Run it from a sealed lead acid battery, or a 25A 13.8vdc power supply.

I have the older FT2600 model of this rig (about 5 years old) and it works great.

I was looking around for some more rig options for you this morning, and I found another one you might consider.

The Yaesu FT 1802M

This is a 2m, 50w rig, with extended receive (136-174 Mhz), built in 10 channel Weather Memory Bank for all the NOAA stations with Waether Alert that will signal you if there is a warning, 221 memory channels, power can be set to 50W/25W/10W/ 5W, CTCss/DCS encode/decode, all for $125 right now at Ham Radio Outlet. http://www.hamradio .com

You could use that as nice base unit at home, coupled to a copper pipe J-Pole. Run it from a sealed lead acid battery, or a 25A 13.8vdc power supply.

I have the older FT2600 model of this rig (about 5 years old) and it works great.

From: Don West
Topic: 776 Message: 776

Please excuse the off topic posting.

I am aware of a postion for a Radio Tech with the Indiana Department of Homeland Security that will be opening in a week.

Hours are normally M-F Days. Occasional deployment to the field in the event of an emergency for up to two weeks is a requirement. A General Radiotelephoney Operator's License (GROL) would be required.

Work location is in Indianapolis at Washington & West Streets.

If you, or someone you know, is might be interested in this postion, please have them contact me at: don-west@...
<mailto:don-west@...>

I can tell you from recent experience that you do need to check the database at least 2 times a day. Around the 10th day or so I would start looking. It's easier if you click on the Amateur link and then your last name and zip code. Hopefully it will show up soon. I would guess with the number of upgrades they are a little behind now. Hope to hear you soon.

Hi Roy and Mary!

I got MY first taste of amateur radio when I was 6 and been bitten ever since!
My older half brother had just got his license and gave me his old Zenith Transoceanic shortwave radio.
This was in the fall of that year and my birthday is in Feb.
Well, my dad got me an old pair of bakelite headphones and THAT was the icing on the cake.
I began listening to stations all around the world and wanted more.
I eventually drifted off into CB land and stayed there for awhile.
Then I got into scanners and more modern forms of communications.
All along my brother had introduced me to the virtues of amateur radio.
A little tease here and there, he KNEW I couldnt resist.
Well, I finally got my ticket a few years ago and its great.
I have talked to more people on 2 m and 70 cm than I ever did on any other type radio.
Just alot of good people! After all, it IS a hobby and I usually listen more than talk.
But its relaxing and im STILL learning.
Glad to have the both of you aboard and perhaps someday we will run across each other on the air waves.

Handhelds work well as mobiles with a antenna mounted on the vehicle. They also can be used at home with an outside antenna. I have not used anything but a handheld in my car for the past 15 years. It is nice that when I park at the shopping mall and see people stealing the hubcaps from the surrounding cars to be able to take the rig with me or unhook it and hide it.
This is a good way to start. A handheld is a good choice for a first radio.

I also recommend that you plan to attend the Dayton Hamvention.

783. Bus Trip to Dayton

Yahoo group: IndyHamRadio
Date: 2007-04-15 13:16:34 UTC
From: Ken Bandy
Topic: 783 Message: 783

The Indianapolis Radio Club has once again chartered a motor coach for the Dayton Hamvention. The round trip cost is $25.00 per person. This does NOT include admission to the Hamvention. The trip will be on Saturday, May 19, 2007. Those of you who have taken advantage of this opportunity in the past know the value and convenience that this offers. The bus drops us off at the front door of Hara Arena, and remains parked just outside the flea market area. It will be available for stashing away those large items during the course of the day.

There will be two pick up points, the first being on the south side of town, at 6:30 a.m., and the second on the east side of town at 7:00 a.m. There will be a quick breakfast stop in the morning, and a more relaxed dinner stop on the return trip. We will return to Indianapolis around 7:00 p.m.

For more information, point your browser to
<http://www.indyradioclub.org/bustripdayton07.htm>
http://www.indyradioclub.org/bustripdayton07.htm or you can send an email to kc9glq@..., or aa9gw@....

ARRL Update on Red Cross Background Investigations

NEWINGTON, CT, Apr 16, 2007 -- In March, the ARRL posted its position statement regarding the American Red Cross background check policy for volunteers. This updates information the League has obtained about that program.

ARRL General Counsel Chris Imlay, W3KD, and Chief Technology Officer Paul Rinaldo, W4RI, met March 20 at American Red Cross offices in Washington, DC, with two attorneys from the Red Cross General Counsel's office and two management-level staff members from Red Cross Disaster Services.

ARRL asked the Red Cross staff if ARRL ARES volunteers would be subject to the American Red Cross background check if they are providing communications for more than seven days. The position of the Red Cross is that ARES volunteers would not be permitted to provide communications at a disaster site for more than seven days without submitting to the Red Cross background check procedure.

Discussion was then held regarding the Red Cross announcement that credit checks and mode-of-living checks would not be conducted. ARRL's stated concern was that the ARC background investigation consent form states that a consumer report and/or an investigative consumer report -- which includes certain credit checks and includes mode of living checks -- will be obtained on the volunteer signing the form.

The ARRL team asked if the Red Cross would be willing to modify the consent form so that it limits the authority granted by the person signing the form to criminal background checks only. The Red Cross representatives did not indicate a willingness to modify the consent form.

The ARRL team also suggested alternatives to the Red Cross investigation firm, MyBackgroundCheck.com. ARRL was given an indication that the Red Cross is also unwilling to accept background checks conducted by other entities, because the Red Cross would be required to compare the methodologies of its selected entity with those of the alternative background-check provider.

ARRL reiterates its recommendation that members carefully review any consent document permitting a private organization to conduct a background investigation on that person. The current Red Cross background check consent form does include permission, without further consent from the volunteer, to conduct a consumer report and/or an investigative consumer report. The Federal Trade Commission and Federal statutes define investigative consumer reports as including a mode-of-living check as well as certain credit checks.

ARRL will not suggest what organizations or agencies should or should not be supported by volunteer Amateur Radio communications. ARRL does wish to facilitate the provision of volunteer services, however.

I'm not aware of any regular nets on any Danville, Indiana, repeaters.

The Hendricks County Amateur Radio Society has a net every Tuesday
evening at 7:30pm on their 147.015 repeater in Belleville, Indiana,
which is in south-central Hendricks County.

Have you tried to do a Hard Reset? Read in the back of the manual. It should say something about a Master Reset. Try that and then re-post.

Grant

Since you're already in Franklin, contact the county zoning department and have them tell you what is permissable and what is not.

I live in New Whiteland, and the town has an ordinance that says no antenna can be more than 100 feet tall....I live in a sub division and a 100 foot tall tower is out of the question as I have no place on my 1/4 acre lot to put such a thing where it wouldn't fall on my neighbors property if it ever got knocked over.

Make sure you get enough concrete under it, and you'll have a tower that will last many years.

Subject: [IndyHamRadio] Indiana Tower Laws????

I have the opportunity to get a tower from a friend. I have searched Google and Yahoo looking for the laws on tower heights. I am in a area in Franklin where there are no Home-owners association. I have trees surrounding my home so appearance wont be an issue. I would like to be around 40 feet. This tower I may be getting is only 30 feet. I have looked at several sites that sell Rohn towers and they are fairly affordable. I may buy a new tower, but I want to make sure I am within the height requirements. Any help would be greatly appreciated.

Tower height regulations usually appear in local zoning ordinances.
Are you within the city limits of Franklin? If so, check with their
building development office (the office you'd go to to get a building
permit). If you are outside of any incorporated town, check at the
county level.

Many cities and counties have their zoning ordinances available
on-line; with others you have to go to the office and ask for a copy.
Zoning ordinances usually address antenna tower or support structure
height and often there is an exemption for amateur radio. If there is
no exemption and the ordinance places an undue burden on amateur
radio, you may have a PRB-1 issue on your hands.

Best thing to do may be to tap into the experiences of your fellow
hams. Find out who the hams are that live nearby and ask them what
they know about local tower height regulations. The Vanity HQ web
site has a neat tool that will look up the amateur radio licenses
within a given ZIP code and display their locations on a Google map.
Go to www.vanityhq.com and look about halfway down the menu on the left.

As Nike says, "just do it". Making any issue of it will make a non-issue complex. If you ask for permission you will run into so much red tape the tower will be rusted away before you get it up.

There is a law in Indiana that essentially reflects PRB-1. It is generally accepted that reasonable accommodation is 75 feet. Dig a hole, put it up, and if anyway complains tell them you are part of "Homeland Security" and give them a copy of PRB-1.

BTW, State Senator Beverly Guard voted against it (Ham Radio).

I still believe that what a person does on their own property is their business, not that of a bunch of Yuppies.

There has been a lot of talk about freedom in the last few years. In order to be truly free, we must tolerate the freedom of others.

Walt I am with you.

BUT...when erecting towers we need to use some common sense. If you live on a city lot that is 50 feet wide, don't build a tower 75 feet tall. What goes up, eventually comes down....whether you are ready or not.

That's great advice. My guess is with a smaller tower you won't have any problems.

I called the city of Urbana IL (where I live) several years ago and found out that no permit is required here for a tower 35 feet or less in height. I doubt if they are going to get out a tape measure and check the height if I put up one that is 40 feet. Now, if I tried to put up one that is 70 feet it would be different.

All areas are different, though, so it might be a good idea to check and see what your particular area's regulations are. I'd guess that if you're not within some village limits the regulations will be more lax.

Grant,

Again sounds like you are getting some good advice for the most part from other posts.

But to just let you know in our instance I had the county zoning board guru come in to a club meeting and he gave a great presentation. He covered a lot of situations to include for those of us who may eventually be surrounded by housing groups - we are grandfathered in even with any new developments.

He even went on to say their office gets blamed for a lot of things but basically Whitley County where we live has no real ordinance or rule for towers. In fact they support amateur radio here and only stress the concern for safety or not creating a hazard.

Course we all basically know those fancy housing areas that have been developed got their own rules and things that govern what you can or cannot do.

Like when we were in North Webster it required us to abide by owner developer and no outside antennas let alone towers were permitted. So we moved to where we can enjoy our freedom. I know some folks get stuck in situations whereby they cannot enjoy ham radio freedom. But guess you have to decide if you want a housing development or freedom.

Looks like you are in a good situation.

Don / KA9QWC

If building permits are required by the county building authority,
they will most likely fine you if they discover that you've started
construction without a permit. I have dealt with building inspectors
in the past and found that arguing with them is often a losing battle.

I am highly in favor of personal property rights, but as long as laws
are on the books restricting what you can build on your property,
flaunting those laws is only asking for trouble. If you don't like
the laws, fight them at the legislative level. If you choose to fight
the laws by blatantly violating them, you are still guilty of breaking the law.

Topic: 793 Message: 809

Building permits for towers are generally based on the question of "Is the thing going to stay up or not? What damage might it do if it comes down?"

As I mentioned earlier, in my city I can put up any number of towers without a permit if they're under 35 feet tall. That's reasonable as something at that height isn't going to wreak much havoc if it does come down.

It certainly won't hurt to call up someone and find out exactly what the regulations in your area are.

Ham Radio Outlet has ONE mic in stock for your AR-147 rig.? It's less than $50 - the ADI line is what Pryme USED to be.? I am not sure Pryme is even making amateur gear anymore.? Spare parts for your rig will be hard to find.

?

http://www.hamradiooutlet.com

?

Call them at 800-444-7927 and ask for Mike.

Bummer...that link is no longer good. I went to ADI/Pryme and got a
tactical radio company. no mention of ADI...hmm

Dick, if you aren't already using a computer based logging application, I would highly recommend one. The one I use, DXKeeper, of the DXLab Suite of programs automatically tracks several awards, including DXCC, WAS, etc. If you want to check out the program, it is available at http://www.dxlabsuite.com/ There are some very nice features of this program: The author is very active in the Yahoo Group devoted to this software, and is responsive to users' requests for features, and bug reports. Secondly, the suite of programs includes the logging software, rig control, spot monitoring, callbook lookup, and a PSK and RTTY application. Third, the price is right, FREE!

73,
Ken

815. Fwd: [tapr-announce] Join Us at the First TAPR/AMSAT Joint Hamvention Banquet

Yahoo group: IndyHamRadio
Date: 2007-04-20 20:18:06 UTC
From: Mark Thompson
Topic: 815 Message: 815
Attachments: 1 described; binary payloads are missing from this source WARC

Joint TAPR/AMSAT Banquet at Dayton 2007

For many years, AMSAT and TAPR have held "competing" Hamvention dinner on Friday evening. Given the tremendous overlap in membership and interest between the two groups, this has always required tough choices.

We're pleased to announce that this year, AMSAT and TAPR will be holding a joint dinner, and it will be at a great venue -- the Air Force Museum.

Here are the details:

"Dinner Under the Wings" will be held Friday evening May 18,2007 at the Air Force Museum in Dayton, OH in conjunction with the 2007 Dayton Hamvention. The doors open at 18:00 with a cash bar and appetizers in the Air Power Gallery (World War II). The buffet dinner will be served at 19:00 in the Cold War area. Following a few announcements and a short presentation you will be free to roam the museum.

Price for the dinner is $35.00 per person and includes appetizers, salad, meal, dessert, coffee, iced tea, tax and gratuity.

See http://afmuseum.com/ or http://www.nationalmuseum.af.mil/ for information about the museum.

The museum will close at 22:00 and everyone must be out of the museum by then.

Reservations are required and can be purchased from TAPR -- go to http://www.tapr.org/dayton.html for more details. There will be no ticket sales at the TAPR booth this year, and sales will close on Monday night, May 14, 2007 to allow us to give the museum a count on Tuesday.

There may also be a special showing of the IMAX movie "Space Station" at 5:00 PM prior to the banquet. See below for details.

Banquet Menu
Roll and Butter
Salad with choice of Ranch, French or Italian Dressing

Top Round of Beef w/carver
Classic Sautéed Chicken Breast in a Sun Dried Tomato Cream Sauce
Grilled Salmon Blackened with Jack Daniel's BBQ Sauce

Roasted Red Skin Potatoes
Rice Pilaf w/ Pine Nuts and Thyme

Prince Edward Blend w/ Yellow Wax Beans, Green Beans and Baby Carrots
Sugar Snap Peas w/ Red and Yellow Peppers

Chocolate Chocolate Espresso Torte w/ berries and Melba Sauce

NOTE: A vegetarian meal choice is available; if you would like this,
please let us know when you order your tickets.

At 5:00 PM on Friday afternoon there will be a special showing of the
IMAX movie "Space Station". This movie is approximately 47 minutes long
and contains about 4 minutes of amateur radio contacts between school
children and the International Space Station. The IMAX theater is
located in the museum building off the main lobby area. Attendees at
the movie will be able to go to the banquet at 6:00 PM when the doors
open about 10 minutes after the movie is over. The lobby contains
restrooms, telephones and some seating.

At least 50 people must sign up for the movie in advance. Reservations
are required -- to place yours, call the museum IMAX theater on
(937)-253-IMAX. Adults are $6.00, seniors are $5.50, and students 8
through college 22 (student ID required) are $4.50.

You are correct. It is 444.650 with a Pos offset. It does not show a PL tone. the call sign is KF4WJT. That repeater is a SKYWARN repeater with Emergency back-up power. It is also RACES and ARES affiliated. What other towns are you close to. I can give you a list of everything in your area. Let me know.

Page 84 of May 2007 CQ magazine has a description of the Purdue University club & officers. Below is some of that description with the profile of officers omitted.

W9YB is the ham radio club at Purdue University in Lafayette, IN. The club has been active since 1920 when it was intially licensed as 9YB. It is the oldest active student organization on campus & has had a big resurgence over the past few years. W9YB i located in the West Tower of the Purdue Memorial Union, its home since 1963. Current equipment includes a Ten-Tec Omni V and a Yaesu FT-920 used for HF work, plus a Kenwood 2-meter rig for packet. The 20-meter beam seen in the cover photo is just one of many antennas on the roof, covering all bands from 160 to 2 meters. In addition, the club operates repeaters on 6 meters, 2 meters, 220 & 440.

If you look closely, you'll notice the mic we're "using" isn't actually plugged in to anything. :-) Ah the joys of posed photography.

From: ROY & MARY PICKETT
Topic: 836 Message: 836

I was wondering something.I saw where amateur opperators are exempt from the law that says you can't carry a scanner. Indiana code 35-44-3 says in the do not apply to list that (A person who holds an amateur radio license issued by the fcc if the person is not transmitting over frequencies assigned for police or emergency purposes.)Does anyone here carry one?

Check it out here

I was wondering.

Is it always up and running?
where it is?
are the frequencies i gave correct?
is it an open repeater?
does it have a website?

This would be the closest repeater to English
that i know of , and i might be able to hit it easier with a handheld
then paoli.

I generally don't, mostly because I have no need to. If I'm spotting or chasing then I'll take it along, otherwise its just one more thing in the car to worry about. While you _can_ legally carry and use a scanner in your car, don't expect every cop that you meet to know that exemption. If you plan on having a scanner in the car, keep a copy of the appropriate section of the IC with your car registration. You should also have a copy of your ham license, either in the car or your wallet. Even with all of that, you might still run into trouble if you happen upon an officer who is particularly zealous.

Legally, in Indiana, a ham may carry a portable scanner...in the car even.? You better be able to produce your license, and I think you have to prove you have no police freqs programmed in your mobile scanner....but I'm not sure.? I do not carry a scanner.

The law makes no mention of not having any police frequencies
programmed in. In fact, the law is about police frequencies. That
having been said, it can still be a very sticky situation if you have
one when you get pulled over, even if you're using it in an entirely
legal manner.

I am a little concerned about this. Although my VX-6R is not a scanner *per se* it will pick up all frequencies from the bottom of the AM broadcast band through 999 MHz, cell phone frequencies excepted.

I often drive around in Indiana to take photos (my other hobby) and I go to the Covered Bridge Festival every year. Should I be concerned about taking the VX-6R into Indiana when I go over that way?

I am not a lawyer, but from a legal standpoint, you're covered. Now
whether you have to deal with a bunch of hassle is a matter of who you
happen upon. The biggest thing is to not do anything to draw
attention to yourself from the well-meaning-but-not-always-correct
agents of the law.

847. FS: PCR100

Yahoo group: IndyHamRadio
Date: 2007-04-30 16:16:04 UTC
From: Brian - KB9BVN
Topic: 847 Message: 847

I have a PCR 100 that I bought used a couple months ago. I have played with it, it's pretty cool, but I need to clear out some stuff for my next set of toys. (Don't ask)

I have a CD of software that I have collected for it, and that includes a PDF of the Icom Manual. Looks like they run $120 or so on eBay lately. It does not include the power supply. It needs a 13.8 vDC supply capable of 600mA with squelch on and 100mA unsquelched. I have been running mine off a 12v SLA and it works great. I have made no mods, and as far as I can tell the unit is not modified in anyway. Antenna connector on it is a BNC...you could stick a rubber duck on it, or a 160m J-Pole as long as the connector is BNC. I had it connected to my 40m 1./2 wave attic dipole, and used it for SWLing, local AM stations, FM stations, public service frequencies, etc.

I want $100 for mine, paypal is fine, free shipping to the US. I will sell this to non-US buyers, you just have to pay the full freight.

Features:

Wideband coverage: 10 kHz - 1.3 GHz* (500 kHz - 1.3 GHz guaranteed*)
Modes: AM, FM, WFM

Unlimited number of memory channels Stereo audio output (external speakers required)

Digital Auto Frequency Control (AFC) circuit to compensate for frequency drift in FM mode

Auto Noise Limiter (ANL) for clean sounding AM audio
Band scope Digital s-meter Large selection of tuning steps available
Tone Squelch RF Attenuator

System Requirements: Intel? i486 DX4 or faster CPU (Pentium? 100 or faster recommended) Microsoft? Windows? 95 or Windows? 98 Minimum 10 MB of free space on hard drive Minimum 16 MB of memory Serial interface (38400 bps throughout) Monitor with at least 640 x 480 pixel resolution (800 x 600 recommended)

Specifications General: Frequency Coverage: 0.010 - 1300.000 MHz*
*Specifications guaranteed 0.5 - 1300 MHz only. Cellular blocked on USA versions: 824 - 849 MHz, 869 - 894 MHz Mode: WFM, FM, AM Number of Memory Channels: 1000 channels per file (50 channels x 20 banks, number of files created is up to the user) Tuning Steps: 1, 5, 6.25, 9, 10, 12.5, 15, 20, 25, 30, 50, 100, 500 kHz and 1 MHz Useable Temperature range: 0? C to +50? C; 32? F to 122? F Frequency Stability: ?5ppm (0? C to +50?, at 1300 MHz)

Power Supply Requirement (negative ground): 13.8 V DC = ?15% or specified AC adaptor Current Drain: PC Off 100 mA Standby (squelched): 600 mA Max.

Audio: 700 mA Antenna Connector: BNC (50 ohm)

Dimensions (projections not included): 131(w) x 33.5(h) x 154.5(d) mm 5.2(w) x 1.4(h) x 6.1(d) in

Weight: approx 500 g 1 lb, 2 oz Receiver: Receive System: Triple conversion super heterodyne (except WFM)

Intermediate Frequencies: 1st -- 266.7 MHz 2nd -- 10.7 MHz 3rd -- 450 kHz (except WFM)

Sensitivity: Frequency Range AM (10 dB S/N) FM (12 dB SINAD) WFM (12 dB SINAD) 0.5 - 1.799 MHz 2.5 ?V -- -- 1.8 - 27.99 MHz 1.8 ?V -- -- 28 - 49.99 MHz 1.8 ?V 0.5 ?V -- 50 - 699.99 MHz 1.0 ?V 0.32 ?V 0.79 ?V 700 - 1300 MHz 1.3 ?V 0.4 ?V 1.0 ?V

Selectivity (typical): FM/AM -- 6 kHz/-6 dB, 15 kHz/-6 dB WFM/FM/AM -- 50 kHz/-6 db WFM -- 230 kHz/-6 dB

AF Output Power (at 13.8 V DC: More than 200 mW⋆ (at 10% distortion with an 8 ohm load) ⋆100 mW x 2; stereo speakers External SP connector: 3-conductor 3.5 (d) mm (1/8")/4 - 8 ohms

Zack,

No need to worry. The exemption was written into the statute because most amateur transceivers meet the definition of "police radio receiver" as defined in the statute. Especially since at the time the law was enacted, many amateur were still using modified commercial rigs (i.e., old police radios) as mobile rigs.

849. 2007 Spring VHF/UHF Sprints

Yahoo group: IndyHamRadio
Date: 2007-04-30 22:07:38 UTC
From: Mark Thompson
Topic: 849 Message: 849

http://www.sysadnet.com/vhfsprintrules.htm

2007 Spring VHF/UHF Sprints
Sponsored by
John Kalenowsky, K9JK, and Steve Gilmore, W4SHG
John Kalenowsky, K9JK, and Steve Gilmore, W4SHG, with support from Ham Radio Outlet of Virginia, are pleased to announce the 2007 Spring VHF/UHF Sprints. Everyone is encouraged to participate, even if only in a small way. The rules have intentionally remained simple, and the contest's focus continues to be for single operator, single transmitter entries, both "fixed" and "rover". A new item for 2007, is a "Rookie" classification, to recognize 'first-time' participants, from their own stations OR as "guest-op" at an "experienced" station to introduce newcomers to weak signal vhf/uhf operations and, hopefully, encourage their participation in the future. Guidance from an experienced operator for a "Rookie" IS permitted as long as entries in this class are clearly identified by comments in the SOAPBOX: lines for Cabrillo formatted logs or on the Summary Sheet for paper logs. The detail should identify who is the "Rookie" and list any "experienced" operator(s) who were present.

Please note that, for 2007, we are both shortening the log submission date window and STRONGLY encouraging electronic log submissions using the Cabrillo format, but we will continue to accept paper logs (though the shorter deadline will apply to paper log submissions as well). A summary sheet which includes your total contacts, multipliers and calculated score WILL BE required with Paper Logs (see sample at: http://www.sysadnet.com/vhfsprintsummary.pdf). Such summary info is not required for electronic logs but may be included in the SOAPBOX: area of the Cabrillo formatted log if participants so desire. Be sure to include the grid square you operated from in either your log or summary sheet.

Please take a look at the sponsors for this year's events at http://www.sysadnet.com/springsprintsponsors.htm. Several sponsorship opportunities are still available. If interested in becoming a prize sponsor or sponsoring a plaque for the events in 2007 (or in the future), please email us at springsprintquestions@...
** Log submissions may be viewed here. **

We wish you the very best of VHF! 73,
John Kalenowsky, K9JK, and Steve Gilmore, W4SHG

1. Object: To work as many amateur stations in as many 2 degree by 1 degree grid squares as possible, using authorized amateur frequencies on the 50, 144, 222, 432, 902 MHz and above bands.
2. Contest Period:
2.1. - 144 MHz
The 144 MHz Sprint will be from 7 PM until 11 PM local time on Monday, April 9, 2007.
2.2. - 222 MHz
The 222 MHz Sprint will be from 7 PM until 11 PM local time on Tuesday, April 17, 2007.
2.3. - 432 MHz

The 432 MHz Sprint will be from 7 PM until 11 PM local time on Wednesday, April 25, 2007.
2.4. - Microwave (902+)
The Microwave Sprint will be on Saturday, May 5, 2007, from 6 AM until 1 PM local time. This includes all Amateur frequencies above 902 MHz. Please include band data in summaries and logs. NOTE: use of Liaison Frequency is encouraged.
2.5. - 50 MHz
The 50 MHz Sprint will be from 2300Z Saturday, May 12, until 0300Z Sunday, May 13, 2007.
3. Exchange: Grid-square locator - PLEASE EXCHANGE and LOG SIX-Character Grid Locators where possible. Correct exchange of FOUR-Character Grid Locator is the minimum requirement for a valid contact but we'd REALLY like to see SIX-Character locators exchanged and recorded in the submitted logs.

What's that, you say you have no clue what your SIX-Character Grid Locator is? To assist you with that, please try the following...
Enter your FOUR-Character Grid Locator here:
When you click the "Show me my Grid Square!" Button, you will be presented with a Google Map showing the borders of the 2-degree by 1-degree FOUR-character Grid Square that you entered. You can then navigate as well as Zoom in and out using the controls at the upper left of the screen. When you click a point on the map, however, the Latitude and Longitude of that point ALONG WITH THE SIX-Character Grid Locator for that point will pop up in a text balloon and the border of the SIX-Character Grid Locator will be shown. This is provided as a service to the Amateur Radio Community by Laurent/Larry Haas, F6FVY, using the Google Maps API. Thanks to Larry and Google! Try it, we think you'll like it!
4. Scoring:
4.1. QSO Points: Count one point for each complete QSO.
4.2. Multipliers: The total number of different FOUR-Character Grid Squares worked. Each FOUR-Character Grid Locator represents a 2 degree by 1 degree area on the earth's surface, the SIX-character designators are just sub-divisions of that. So, to be clear, if you work a station in EN53bj and another in EN53we, that is only ONE Multiplier, EN53.
4.3. Final score: Multiply QSO points by multipliers. Each Sprint is scored separately.
4.4. Rovers use same QSO Point and Multiplier criteria but scoring for Rovers is cumulative, total # of multipliers worked from each grid activated multiplied by total # of complete QSOs from each grid activated. Segregation of rover logs by grid activated is no longer required as long as the log makes it clear from which FOUR-Character grid locator each contact was made.
Example: Scores from EM98 5 qso's , 3 grids / EM99 10 qso's, 4 grids / EM89 3 qso's, 2 grids.
Total score would be 18 qso's x 9 grids = 162 points
4.5. Microwave Sprint scoring is cumulative, total # of grids worked from each band activated multiplied by total # of stations worked in each band activated.
5. Reporting: Logs (Cabrillo format preferred) must be received via e-mail or paper logs WITH summary sheet postmarked no later than following deadlines (roughly two weeks after the close of each event):
5.1. - 144 MHz - April 24, 2007
5.2. - 222 MHz - May 2, 2007
5.3. - 432 MHz - May 10, 2007
5.4. - Microwave (902+) - May 21, 2007
5.5. - 50 MHz - May 29, 2007
6. Awards:
6.1. Certificates/Plaques (if sponsored) will be awarded as follows:

6.1.1. TOP FIVE individual scores for each of the five Sprint "band" events (Single-Op Fixed, Rover and Rookie will be considered for this ranking).
6.1.2. TOP FIVE cumulative Single-Op Fixed scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.3. TOP FIVE cumulative Rover scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.4. TOP FIVE cumulative Rookie scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.5. If a plaque is not sponsored for a particular finish above, a certificate (similar to what other VHF Contest sponsors provide) will be sent. "Specialty" plaques will also be considered (such as for best finish in a region) if anyone wants to sponsor such (and can provide a clear criteria). Please contact John or Steve regarding that. To view what plaques have been sponsored (and criteria) for 2007, click here.
6.2. Prizes: As they are sponsored, prizes will be awarded based on criteria of the sponsor. As an example, the simplest criteria will be "random drawing from all logs received." To view what prizes have been sponsored (and criteria) for 2007, click here.
7. Submission of Logs:
7.1. By submitting a log, participants confirm that they have observed all contest rules, as well as all regulations established for amateur radio in their country and that their log submission is true and accurate to the best of their knowledge. Participants further agree to be bound by the decisions of the Spring Sprint sponsors.
7.2. Electronic Logs:
7.2.1. The "Cabrillo" log format is now the standard for the Spring Sprints.
7.2.1.1. Use the following names for the Cabrillo "CONTEST:" field:
For 144 MHz, use CONTEST: VHF-SPRINT-144MHZ-SPRING
For 222 MHz, use CONTEST: VHF-SPRINT-222MHZ-SPRING
For 432 MHz, use CONTEST: VHF-SPRINT-432MHZ-SPRING
For "Microwave" (902 MHz & Up), use CONTEST: VHF-SPRINT-MICROWAVE-SPRING
For 50 MHz, use CONTEST: VHF-SPRINT-50MHZ-SPRING
7.2.1.2. Until logging programs with 'official' support for these events become more available, the closest format is probably for the June or September ARRL VHF QSO Parties (as long as the logging program knows how to handle SIX-Character Grid Square input and can properly 'ignore' the 5th and 6th characters for Multiplier counting). It may be necessary to manually edit the "CONTEST:" line in the file and Claimed Score may be incorrect for bands 222 MHz and above but the QSO data should be correct.
7.2.1.3. E-mail logs to: springvhfsprints@... preferably using a "Plain Text" e-mail format, with ONLY "your call" and the "band" in the subject line (W4SHG 144 -or- K9JK MICROWAVE for example) and with the log file as an attachment named "<your call>.LOG" (e.g. W4SHG.LOG)
7.2.2. "Web-to-Cabrillo": Bruce Horn, WA7BNM, has graciously agreed to provide 'web forms' to facilitate generation and AUTOMATIC SUBMISSION of Cabrillo-formatted logs for the Spring VHF & Up Sprints at the http://b4h.net/cabforms web site that he maintains. You may have to scroll down the homepage a bit to the "Other Contests" area to find the ones for the Spring VHF Sprints and they may not be there until just before the actual contests. PLEASE consider using these to generate and submit electronically instead of submitting a paper log. Our thanks to Bruce!
7.3. Paper logs:
7.3.1. Paper logs must include a Summary sheet and the log sheets themselves should include the following information:
Band (in MHz, e.g. 50, 144, 222, 432, 902. For above 902, change to GHz, e.g. 1.2, 2.3,

3.4, etc.)
Mode (e.g. CW, PH, DIG)
Date/Time (PLEASE indicate whether the dates & times are "local" or UTC)
Callsign SENT (can be listed at the top of a page OR on each line)
Grid Locator SENT (PLEASE give your SIX-character locator when known)
Other Station's Callsign
Other Station's Grid Locator (PLEASE ask for and record SIX-character when the other station provides it)
7.3.2. "Snail Mail" paper logs to:
Steve Gilmore – W4SHG
11 Ryan Way
Stafford, VA 22554

What do you think?

Roy
KC9LKW

I seldom take along a scanner,but sometimes I do.I keep a copy of the
law with me. In 1978 I attended the Indiana Law Enforcement Academy.
[53rd session] The topic of scanners came up one day in class. The
general opinion was that it was no problem for citizens to listen in.
Sometimes citizens hear calls and see whats going on and can call
dispatch to report.I really don't understand the problem with
listening to the cops anyway. You can't keep track of where they are.I
guess
unless the give their 20 every minute.Still it is the law.We have
all [I think] heard it said "ignorance of the law is no excuse".That
applies to cops too I hope.
All the 2 meter rigs I have will receive all the county and town
frequency's around here but will not transmit on them.If we are
operating legally we should not have to be concerned with bully cops
who don't know the law.I think that mostly is from small town rookies
or "special deputies"who have not been to the academy.

Give me your county and the surrounding counties. I also need the cities that are in the counties. Email me at nascargrant@... and I will reply back. English as a town does not have anything listed.

Roy,

Go to http://www.ircinc.org/ and click on "Indiana Repeaters Online". This will give you a list of every coordinated repeater in the state, sorted by frequency.

Also, ARRL has a neat CD called TravelPlus for Repeaters ($39.95) that has all of the repeater data for the country. When you run the app, you can click on your location on the map, enter the frequency band & a desired radius, & the program will give you a list of all repeaters within the desired radius from your location. Until the end of the month, you get a free Repeater Directory with the CD-ROM.

From your location, your best bet will probably be the Floyds Knobs repeater or the Louisville repeaters. They are located on top of the Knobs & have pretty good range.

Grant,

He is near the border of Harrison & Crawford counties. Milltown itself is on SR 64 just barely into Harrison County.

CRAWFORD COUNTY-- English , marengo ,milltown ,levenworth ,
DUBOIS Jasper huntingburgh ferdinand
ORANGE Paoli orleans
HARRISON Corydon

These counties have lots more towns in them , but i
don't have a map to look at right now. Is there a reliable place i
can do a search by county?

855. Travel Question

Yahoo group: IndyHamRadio
Date: 2007-05-05 02:57:59 UTC
From: Grant Black
Topic: 855 Message: 855

I will be traveling from Indy to Evansville weekly over the next 4 weeks. I have searched the internet looking for a site that shows Indiana counties and the cities in them. I would like to program my 2-meter radio before I go. I will be taking 65S to 64W. I will be traveling through the following counties Jackson, Scott, Clark, Floyd, Harrison, Crawford, Perry, Spencer, Warrick and Vanderburgh. If anyone has ANY info on ANY repeaters in these counties please chime in. I have the 07-08 repeater directory, but I have no idea where any of the cities are. Any help would be greatly appreciated.

You can download the official Indiana highway map at
http://www.in.gov/dot/div/technology/maps/Indianamap_2005.pdf

It shows cities and counties. Warning, this a big PDF file.

> I would like to program my 2-meter radio before I go.

This is an ideal application for the ARRL Travel Plus for Repeaters program. You can select your route using mouse clicks and the program will produce a list of repeaters along the route. I'm not advertising for the ARRL. However, this is a very slick tool.

Another note on the Travel Plus program. If you are using a GPS/laptop combo in your vehicle (DeLorme, for example), the Travel Plus program can also use the GPS info to give you repeater info in the area you are in, in real time!

Grant,

Unless you are making stops in between, I wonder why you are not taking I-70 west to Terre Haute & then south on US 41 to Evansville, as it is much closer & faster. From I-465 & I-65 on the south side of Indy to I-64 & US 41 north of Evansville, it is nearly 40 miles closer to go through Terre Haute (169 mi vs. 207 mi.). You have 4-lane highway all the way & by-passes around Vincennes & Princeton.

Going through Terre Haute, you would have the following 2m repeaters:

Putnamville: 147.33 MHz
Terre Haute: 146.685 MHZ, PL 151.4 Hz
Terre Haute: 145.230 MHz
Dugger: 146.775 MHz
Vincennes: 146.670 MHz, PL 91.5 Hz
Princeton: 145.410 MHz
Evansville: 146.790 MHz, PL 88.5 Hz

There are many other repeaters along the route, but these are the most used & widest coverage systems.

Another piece of advice if you're getting the info by hand: don't limit yourself to repeaters in the counties you're traveling through. For example, down near the Falls of the Ohio, the most used repeater is KY4KY, located just south of Louisville, KY. Depending on your setup, you can generally hit it once you get near Sellersburg on I-65 until about the US-150 exit on I-64. That's been my experience, at least, your mileage may vary.

I remember when the "Mighty 5.25" was active, I could hit it from
Champaign IL (well, it did have all those remote receiving sites ...)

The Mighty 525 was quite a great system in its day. I miss it. Used to chat with N9GMU, N5CEC, and others on there.

Is Bob WA8VZY still in the area? Very nice guy.

Oh yeah, Bob still lives in greater metropolitan Flat Rock, Indiana!

The "Mighty 5.25" or "The Big One" as WG6I used to put it, has been missed by most of those who ever had an opportunity to use/abuse it. It's a shame that the political opinions of a few, can frustrate a person like Bob into throwing in the towel. Although there was the fire in the rack that destroyed the amplifier and all of the wiring ----- sigh...

Perhaps somebody should attempt to locate the "Green and Mouldy" one...
Or, perhaps not!!!

Mike (N5CEC)

873. For Sale Icom IC2100H 2M Transceiver

Yahoo group: IndyHamRadio
Date: 2007-05-12 03:52:29 UTC
From: Ivin Flint
Topic: 873 Message: 873

I am selling an Icom IC-2100H 2 meter Transceiver. It is in the original box and plastic. Includes the instruction Manual. The Mic is the HM-133S that allows you to operate the radio functions through the mic. Very nice when mobile. Has mobile bracket with hardware. and power cord. Comes from a non-smoking environment.

I used this in my last car but I just can't find a space in my new car for it. It works exactly as it should and the rig has no flaws. There is tape residue on the power cord where I had it taped up to stay out of the way.

Asking 120.00 with free shipping in Indiana. Will Ship UPS. I don't have a pay-pal account, so I accept cash or money order.

Please e-mail me direct if interested.

Thanks,
Ivin W9ILF

874. Indianapolis D-STAR Digtal Voice Repeater Update

Yahoo group: IndyHamRadio
Date: 2007-05-12 14:58:24 UTC
From: Mark Thompson
Topic: 874 Message: 874

I understand that the Indianapolis UHF D-STAR repeater has recently changed frequencies and is now on 444.125 MHz.

The 147.39 MHz frequency that was used for a FM repeater has become a 2m D-STAR repeater.

More importantly, the Indianapolis D-STAR digital voice repeaters are now connected to the internet via Icom's D-STAR PC gateway.

The D-STAR repeaters use the call W9ICE.

For more details about the W9ICE's Indianapolis D-STAR repeaters:
http://www.w9ice.com/information__projects.htm

For more Information about D-STAR:

From: Brian Murrey
Topic: 877 Message: 877

I can not go this year, work and all that stuff is in the way but I am looking forward to an awesome Field Day with the Flying Pigs. We're setting up as usual, at Caesar Creek State Park just south of Dayton and we'll probably be running 3B and all QRP.

What are the rest of you doing for Field Day?

73

PS - There is an Open Invitation to join the Flying Pigs event if you are so inclined. Let me know and I'll get you the details.

880. Indiana Amateur loses license

Yahoo group: IndyHamRadio
Date: 2007-05-17 11:37:27 UTC
From: Brian - KB9BVN
Topic: 880 Message: 880

Loss of Amateur Radio License is Part of Settlement with FCC
NEWINGTON, CT, May 16, 2007 -- An Indiana radio amateur will have to surrender his General ticket under the terms of a Settlement Agreement reached with the FCC stemming from alleged corporate and personal misdeeds. In addition, Timothy M. Doty, WB9MCD, of W Terre Haute, will have to yield his General Radiotelephone Operator License, and Commercial Radio Service (CRS) Inc, in which he's an equal partner with his brother, Gary, will have to surrender its Land Mobile Service licenses. In a Memorandum Opinion and Order (MO&O) in EB Docket 06-168, released April 26, the FCC said the settlement spares all parties from a lengthy legal proceeding, although according to its terms, neither the Dotys nor CRS admit to any violation of the Communications Act of 1934 or FCC rules.

"Suffice it to say, approval of the Agreement will obviate the need for a protracted hearing, thereby conserving the resources of the Commission and the private parties," the FCC said in its MO&O. "In addition, approval of the Agreement will provide for a fair and equitable resolution of this proceeding."

The agreement stipulates that neither Doty will be able to apply for or hold "any attributable interest in any Commission license or authorization" for five years. CRS and the Dotys also will make a "voluntary donation" of $10,000 to the US Treasury. If the matter had gone to hearing, CRS could have been liable for fines approaching $100,000.

In an Order to Show Cause last August, the FCC ordered Timothy Doty and CRS to show cause why their respective Commission licenses should not be revoked. The FCC cited information it had received suggesting that CRS may not have properly disclosed information about Timothy Doty's felony convictions in applications the company filed with the Commission.

In several proceedings in recent years, the FCC has considered a licensee's or applicant's character among those factors it considers when determining whether an individual possesses the requisite qualifications to be a Commission licensee.

As the agreement recites, in 1991 Doty was convicted in federal court of a felony that involved manufacture and possession of unauthorized satellite TV descrambling devices. He received three years' probation and a $2000 fine. In 2001, Doty was found guilty in state court on a felony count of possessing a controlled substance and sentenced to 18 months incarceration with all but 30 days suspended.

FCC Enforcement Bureau Chief Kris Anne Monteith and the Dotys -- with Gary Doty representing CRS -- signed off on the Settlement Agreement in April. Administrative Law Judge Arthur I. Steinberg, who approved the agreement,

issued the MO&O effectively closing out the proceeding.

"It appears, therefore, that the concerns raised by the Commission in its order designating this case for hearing will have been resolved," the FCC concluded.

881. Netzero add-on causing me problems...

Yahoo group: IndyHamRadio
Date: 2007-05-18 16:05:46 UTC
From: ROY & MARY PICKETT
Topic: 881 Message: 881

About a month ago me and my wife bought a new
gateway. Almost immediately we started having problems. When you have more then one site open, and close one, they all would close. This was causing her BIG problems in her online classes. She would do her homework and do the spell check, and upon closing spell check, would lose everything. I called Gateway about the problem and they told me to disable the add-ons one at a time. As I disabled them one by one, I found the culprit.
It is part of the Netzero called ZEROBAR. After disabling it, I have had no problems at all. This was happening with my Dell also. My Dell has XP and the Gateway has the new Vista so I guess program has nothing to do with it. If your having problems and have Netzero, Try what I did and it may be your problem to..

From: Brian - KB9BVN
Topic: 882 Message: 882

While Dayton and FDIM are fading in the rear view mirror, there is no better time than now, to think about Field Day 2007. Once again the Flying Pigs QRP Club International will be encamped at the Ceasar Creek State Park Horseman Camp just south of Dayton in Waynesville Ohio. W8PIG has made this an annual event since 1999 and it has always been a fun filled weekend.

If you are in the area during Field Day weekend, stop by the Horseman Camp and visit with the gang, but be prepared to have a lot of fun and add to the logbook. The Saturday night bonfire is something you may never forget.

34 days to Field Day!

886. What's New at Dayton 2007

Yahoo group: IndyHamRadio
Date: 2007-05-24 17:21:11 UTC
From: Mark Thompson
Topic: 886 Message: 886

What's New at Dayton 2007?

Elecraft’s new K3 HF and 6 meter transceiver and its many options created quite a stir at Dayton.

Gerald Youngblood, K5SDR, lead developer of the FlexRadio series looks justifiably proud of his newest model.

Inside view of one side of the Flex-5000.

The new Hilberling PT-8000 HF and VHF transceiver. This is available in your choice of colors.

Inside view of the Hilberling PT-8000.

The new ICOM IC-7700, think IC-7800 with a single receiver.

Yaesu FT-450 HF and 6 meter transceiver, shown with optional internal antenna tuner.

Kenwood’s new TM-710 V/UHF dual band transceiver.

Yaesu’s new FTM-10 V/UHF dual band transceiver – designed for the open road.

New legal limit autio tuner from MFJ, the MFJ-998.

DSP noise reduction speaker from West Mountain Radio.

West Mountain Radio also offers their audio DSP in a stand alone board version.

Paul Hrivnak, N8PH, President, CEO and Chief Engineer of Palstar is justifiably proud of his new antenna tuner.

Joel R. Hallas, W1ZR
It always a treat when we get to see a new HF transceiver at Dayton -- it is usually the star of the show! Last year's show stealer was the Yaesu FT-2000; the year before it was the ICOM IC-7000. This year we had the good fortune of having no fewer than six to look over. In alphabetical order:

HF Transceivers
Elecraft announced their new K3 HF and 6 meter transceiver. Perhaps transceivers would be a better word. There are so many options (all upgradeable later if you choose) that you can configure anything from a kit-built 10 W portable QRP radio to a fully-featured, contest-ready 100 W rig with two high performance receivers. It is scheduled to ship starting in July.

FlexRadio Systems, well known for their line of high-performance software defined radios, introduced the Flex-5000 HF and 6 meter transceiver series promising higher performance and more features. Included are the Flex-5000C, a fully integrated system in a single box, and the Flex-5000D with a second receiver.

Hilberling, the first Amateur Radio manufacturer from across the Atlantic for some years, announced their PT-8000 transceiver. This is offered as a full-featured HF and VHF transceiver available in 10, 100 or 600 W versions and promises top performance. It is distributed in North America by Array Solutions.

ICOM unveiled their new IC-7700 HF and 6 meter transceiver. This appears to be a single receiver version of their top of the line IC-7800, sharing the 200 W transmitter, high performance receiver and 7 inch display of its sibling. It is being marketed for the "contester," but should be of interest to anyone who coveted the features of the deluxe IC-7800, but didn't need two receivers, or its price tag.

Ten-Tec displayed their new Omni-VII HF and 6 meter transceiver. Their new "distributed roofing filter architecture" promises ham-band only receive performance with a general coverage receiver. See our Product Review in this issue.

Finally, Yaesu showed their new FT-450 HF and 6 meter transceiver. Just as last year's FT-2000 arguably had its roots in their top of the line FT-9000, inheriting a substantial number of its features, the FT-450 has a similar relationship to the FT-2000, at a correspondingly lower price.

The SPE Expert 1K-FA HF and 6 meter 1000 W linear distributed in North America by ARRAY Solutions.

Dishtronix legal limit 100% duty cycle solid-state amplifier.

Linear power supply for Dishtronix legal limit 100% duty cycle solid-state amplifier.

Tokyo High Power showed its new 750 W output HF and 6 meter linear.

Tokyo High Power also showed its new 1000 W output HF and 6 meter linear.

Tokyo High Power moved up the spectrum with its new 2 meter linear.
What else did Dayton-goers find this year? Quite a bit!

HF Power Amplifiers
Also distributed in North America by Array Solutions is the SPE Expert 1K-FA solid state linear amplifier. It is a compact light weight (44 pounds) fully automated, full break-in capable amplifier that puts out 1000 W PEP on 160 through 6 meters. An internal 120 or 240 V ac power supply and antenna tuner add to the handiness if this convenient amplifier.

Dishtronix showed off their 100% duty cycle, 1500 W PEP as well as 1500 W CW, RTTY, FM output solid-state linear. This is a serious amplifier at 65 pounds with a separate 120 pound linear power supply, or choose their 54 pound switching supply. It was just sitting there, quietly heating up a dummy load at the legal limit, key down.

Tokyo Hy-Power had a great debut at Dayton this year, bringing their collection of three HF amplifiers newly introduced to the US market. They showed their HL-1.2KFX 750 W output, their HL-1.5KFX 1 kW output and HL-2.5KFX legal limit amplifier as well as the HL-500V 2 meter linear. All are completely solid state and the HF units offer automatic band decoding when used with many popular transceiver lines. They also offer a new legal limit automatic antenna tuner.

Moving Up the Bands
Kenwood announced a new V/UHF mobile transceiver, the TM-710. It offers many new features. Of particular note is free software that allows downloading repeater data from Travel Plus directly into radio memories -- a real boon for those who travel and have grown tired of manually storing all that repeater data for your trip. Other features include crossband repeater functionality and an innovative reversible control head that allows the radio's speaker to end up either on the top or bottom of the unit.

Yaesu introduced a new V/UHF transceiver especially for hams on the go! The FTM-10 is designed to mount on the handlebars of your bike or motorcycle so that you don't even need a mic -- just talk into the front panel and you're on the air! For those times when you don't have handlebars in front of you, it can also be configured as a traditional transceiver.

Accessories
Radio accessories are always popular at Dayton and MFJ can always be counted on to have new products anywhere you see them. Topping their list this year is the MFJ-998 1500 W Intellituner. This legal limit auto tuner is designed to handle loads from 12 to 1600 ohms from 160 to 10 meters and includes two outputs and sophisticated memory, protection and control features.

MFJ also introduced a stereo version of its speech intelligibility enhancer for receive audio, the MFJ-618. This provides sound field expansion and allows independent compensation for each ear. There is also a new battery booster, the MFJ-4416. It is a dc to dc converter that allows your partially discharged battery, as low as 9 V, system to provide up to 25 A at 13.8 V -- a great asset form EmComm users, particularly since PowerPole connectors are provided as well as screw terminals. They also offer a new Super-strong Telescopic Mast, the MFJ-1906/8 in either 33 or 43 foot lengths. This fiberglass mast has a wall thickness of 0.125 inches for rigidity and is offered with either snap clamps or stainless hose clamps.

West Mountain Radio, the RigBlaster and RigRunner folk, have branched out into the audio side of your radios. They introduced a DSP-equipped speaker designed for the HF operator who would like more signal and less noise. They also have a new DSP module to use with your speaker and a speaker that will sound good and can sit next to your computer monitor without causing distortion in either direction.

Antenna Tuners
In addition to the MFJ-998 above, I noticed a few other antenna tuners in my travels. Palstar has a new version of their AT1 series. The AT1KP covers 160 through 6 meters. By switching in the 160 meter inductance only when needed, the AT1KP reduces the minimum capacitance of the tuner so it can cover 6 meters. One touch of the front panel button and "top band," 160 meters, is back on without sacrificing performance on the higher bands.

The Swiss Antenna Matching System from Heinz-Bolli is a legal-limit remote-controlled tuner designed for outdoor mounting. It can be manually tuned by remote control or auto tuning can be used to select the best tuner configuration or adjust the parameters. It is distributed in North America by Array Solutions.

887. 2007 ARRL June VHF QSO Party, June 9 - 11

Yahoo group: IndyHamRadio
Date: 2007-05-24 17:22:09 UTC
From: Mark Thompson
Topic: 887 Message: 887

2007 ARRL June VHF QSO Party Rules
General Rules
1. Object: To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.

2. Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 9-11, 2007).

3. Entry Categories:
3.1 Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.2 Single Operator Portable.
3.3. Rover.
3.4. Multioperator.
3.5. Limited Multioperator.

4. Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of signal report is optional.

5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3 GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees by 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.

6. Reporting:
6.1. Entries may be submitted as follows:
6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@arrl.org
6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111.
6.1.3. Web entries submitted via the web-based applet at: http://www.b4h.net/cabforms/
6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes.

6.3. Entries must be emailed or postmarked no later than July 11, 2007. Late logs may be designated as checklogs only.

7. Miscellaneous:
7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
7.2. Only permitted one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7.4. Forms may be obtained by:
7.4.1. Downloading from the Internet at the Contest Branch Website: http://www.arrl.org/contests/forms.
7.4.2. Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.

8. Awards: Certificates will be awarded in the following categories:
8.1. Single operator.
8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section.
8.1.2. Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)
8.3. Top Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
8.6. Plaques, if sponsored, will be awarded in the following categories:
8.6.1. Top 10 Single Operator (both High and Low Power) scorers.
8.6.2. Top 5 Single Operator Portable scorers.
8.6.3. Top 5 Rover scorers.
8.6.4. Top 10 Multi-Operator scorers.
8.6.5. Top 5 Limited Multi-Operator scorers.

9. Other:
9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)" at www.arrl.org/contests/forms
9.2. For more information, queries or questions contact contests@arrl.org or (860) 594-0232.

From: Bob Burns W9RXR
Topic: 886 Message: 888

At 01:21 PM 5/24/2007, Mark Thompson wrote:

>Kenwood announced a new V/UHF mobile transceiver, the TM-710.

Kenwood's new dual-band mobile is the TM-V71A. You can see it on
their web site at:

http://kenwoodusa.com/products/ListProduct.aspx?k1=3&k2=9&k3=10&pr=2764

Kenwood has another new mobile in the works, the TM-D710A. This will
be a replacement for the TM-D700 with built-in TNC and APRS
capabilities like the D700. Kenwood showed a prototype of the D710 in
a clear plastic case at Dayton. I was told that the firmware is still
under development, but they expect to have it on the market by this fall.

Rick I had this list on my HD from another List I have No idea how Accurate
hope it Helps

Happy Scanning

Don KA9QJG

Confirmed Frequencies:
2 Tomas Scheckter 465.9875
3 Helio Castroneves 464.5750
4 Vitor Meira 468.5375
5 Sarah Fisher 463.2875
6 Sam Hornish Jr. 464.8250
7 Danica Patrick 463.3625(Encrypted till
Carb & Race Day)
8 Scott Sharp 467.8375
9 Scott Dixon 469.8875
10 Dan Wheldon 467.0375
11 Tony Kanaan 466.2625(Encrypted till
Carb & Race Day)
12 Ryan Briscoe 464.7000
15 Buddy Rice 465.7125
17 Jeff Simmons 466.9125
20 Ed Carpenter 468.2500
23 Milka Duno 455.7375
25 Marty Roth 469.4375
26 Marco Andretti 464.1375(Encrypted till
Carb & Race Day)
27 Dario Franchitti 466.5375(Encrypted till
Carb & Race Day)
39 Michael Andretti 464.2250(Encrypted till
Carb & Race Day)
50 Al Unser Jr. 461.4625
55 Kosuke Matsuura 451.1000
99 Buddy Lazier 466.4250

Driver on track, but could not find:
19 Jon Herb Tried 461.7750, 468.9875, 463.9750,

466.7750, 466.3375
22 A.J. Foyt IV Tried 466.9250, 461.8875, 468.9750,
464.0875
02 Davey Hamilton Tried 468.9750, 464.3625, 461.0625,

469.2250, 466.3750

Rick,

The 2 companies (one is Racing Electronics & I think the other is Track Scan) that rent scanners at the track will sell you a current list for $5 (at least that has been the price for several years now). The list is updated daily & the $5 gets you all of the updated lists. That is, if you buy one at qualifications or on carb day, etc., you can exchange that list on race day for the updated list at no charge.

Subject: [IndyHamRadio] What's New at Dayton 2007

What's New at Dayton 2007?

Elecraft’s new K3 HF and 6 meter transceiver and its many options created quite a stir at Dayton.

Gerald Youngblood, K5SDR, lead developer of the FlexRadio series looks justifiably proud of his newest model.

Inside view of one side of the Flex-5000.

The new Hilberling PT-8000 HF and VHF transceiver. This is available in your choice of colors.

Inside view of the Hilberling PT-8000.

The new ICOM IC-7700, think IC-7800 with a single receiver.

Yaesu FT-450 HF and 6 meter transceiver, shown with optional internal antenna tuner.

Kenwood’s new TM-710 V/UHF dual band transceiver.

Yaesu’s new FTM-10 V/UHF dual band transceiver – designed for the open road.

New legal limit autio tuner from MFJ, the MFJ-998.

DSP noise reduction speaker from West Mountain Radio.

West Mountain Radio also offers their audio DSP in a stand alone board version.

Paul Hrivnak, N8PH, President, CEO and Chief Engineer of Palstar is justifiably proud of his new antenna tuner.

Joel R. Hallas, W1ZR

It always a treat when we get to see a new HF transceiver at Dayton -- it is usually the star of the show! Last year's show stealer was the Yaesu FT-2000; the year before it was the ICOM IC-7000. This year we had the good fortune of having no fewer than six to look over. In alphabetical order:

HF Transceivers

Elecraft announced their new K3 HF and 6 meter transceiver. Perhaps transceivers would be a better word. There are so many options (all upgradeable later if you choose) that you can configure anything from a kit-built 10 W portable QRP radio to a fully-featured, contest-ready 100 W rig with two high performance receivers. It is scheduled to ship starting in July.

FlexRadio Systems, well known for their line of high-performance software defined radios, introduced the Flex-5000 HF and 6 meter transceiver series promising higher performance and more features. Included are the Flex-5000C, a fully integrated system in a single box, and the Flex-5000D with a second receiver.

Hilberling, the first Amateur Radio manufacturer from across the Atlantic for some years, announced their PT-8000 transceiver. This is offered as a full-featured HF and VHF transceiver available in 10, 100 or 600 W versions and promises top performance. It is distributed in North America by Array Solutions.

ICOM unveiled their new IC-7700 HF and 6 meter transceiver. This appears to be a single receiver version of their top of the line IC-7800, sharing the 200 W transmitter, high performance receiver and 7 inch display of its sibling. It is being marketed for the "contester," but should be of interest to anyone who coveted the features of the deluxe IC-7800, but didn't need two receivers, or its price tag.

Ten-Tec displayed their new Omni-VII HF and 6 meter transceiver. Their new "distributed roofing filter architecture" promises ham-band only receive performance with a general coverage receiver. See our Product Review in this issue.

Finally, Yaesu showed their new FT-450 HF and 6 meter transceiver. Just as last year's FT-2000 arguably had its roots in their top of the line FT-9000, inheriting a substantial number of its features, the FT-450 has a similar relationship to the FT-2000, at a correspondingly lower price.

The SPE Expert 1K-FA HF and 6 meter 1000 W linear distributed in North America by ARRAY Solutions.

Dishtronix legal limit 100% duty cycle solid-state amplifier.

Linear power supply for Dishtronix legal limit 100% duty cycle solid-state amplifier.

Tokyo High Power showed its new 750 W output HF and 6 meter linear.

Tokyo High Power also showed its new 1000 W output HF and 6 meter linear.

Tokyo High Power moved up the spectrum with its new 2 meter linear.
What else did Dayton-goers find this year? Quite a bit!

HF Power Amplifiers

Also distributed in North America by Array Solutions is the SPE Expert 1K-FA solid state linear amplifier. It is a compact light weight (44 pounds) fully automated, full break-in capable amplifier that puts out 1000 W PEP on 160 through 6 meters. An internal 120 or 240 V ac power supply and antenna tuner add to the handiness if this convenient amplifier.

Dishtronix showed off their 100% duty cycle, 1500 W PEP as well as 1500 W CW, RTTY, FM output solid-state linear. This is a serious amplifier at 65 pounds with a separate 120 pound linear power supply, or choose their 54 pound switching supply. It was just sitting there, quietly heating up a dummy load at the legal limit, key down.

Tokyo Hy-Power had a great debut at Dayton this year, bringing their collection of three HF amplifiers newly introduced to the US market. They showed their HL-1.2KFX 750 W output, their HL-1.5KFX 1 kW output and HL-2.5KFX legal limit amplifier as well as the HL-500V 2 meter linear. All are completely solid state and the HF units offer automatic band decoding when used with many popular transceiver lines. They also offer a new legal limit automatic antenna tuner.

Moving Up the Bands

Kenwood announced a new V/UHF mobile transceiver, the TM-710. It offers many new features. Of particular note is free software that allows downloading repeater data from Travel Plus directly into radio memories -- a real boon for those who travel and have grown tired of manually storing all that repeater data for your trip. Other features include crossband repeater functionality and an innovative reversible control head that allows the radio's speaker to end up either on the top or bottom of the unit.

Yaesu introduced a new V/UHF transceiver especially for hams on the go! The FTM-10 is designed to mount on the handlebars of your bike or motorcycle so that you don't even need a mic -- just talk into the front panel and you're on the air! For those times when you don't have handlebars in front of you, it can also be configured as a traditional transceiver.

Accessories

Radio accessories are always popular at Dayton and MFJ can always be counted on to have new products anywhere you see them. Topping their list this year is the MFJ-998 1500 W Intellituner. This legal limit auto tuner is designed to handle loads from 12 to 1600 ohms from 160 to 10 meters and includes two outputs and sophisticated memory, protection and control features.

MFJ also introduced a stereo version of its speech intelligibility enhancer for receive audio, the MFJ-618. This provides sound field expansion and allows independent compensation for each ear. There is also a new battery booster, the MFJ-4416. It is a dc to dc converter that allows your partially discharged battery, as low as 9 V, system to provide up to 25 A at 13.8 V -- a great asset form EmComm users, particularly since PowerPole connectors are provided as well as screw terminals. They also offer a new Super-strong Telescopic Mast, the MFJ-1906/8 in either 33 or 43 foot lengths. This fiberglass mast has a wall thickness of 0.125 inches for rigidity and is offered with either snap clamps or stainless hose clamps.

West Mountain Radio, the RigBlaster and RigRunner folk, have branched out into the audio side of your radios. They introduced a DSP-equipped speaker designed for the HF operator who would like more signal and less noise. They also have a new DSP module to use with your

speaker and a speaker that will sound good and can sit next to your computer monitor without causing distortion in either direction.

Antenna Tuners

In addition to the MFJ-998 above, I noticed a few other antenna tuners in my travels. Palstar has a new version of their AT1 series. The AT1KP covers 160 through 6 meters. By switching in the 160 meter inductance only when needed, the AT1KP reduces the minimum capacitance of the tuner so it can cover 6 meters. One touch of the front panel button and "top band," 160 meters, is back on without sacrificing performance on the higher bands.

The Swiss Antenna Matching System from Heinz-Bolli is a legal-limit remote-controlled tuner designed for outdoor mounting. It can be manually tuned by remote control or auto tuning can be used to select the best tuner configuration or adjust the parameters. It is distributed in North America by Array Solutions.

From: Don West
Topic: 894 Message: 894

Does anyone know if there is any kind of "Ham Radio Welcome Wagon/Visitors Bureau" operation done on any of the repeaters for the 500 Weekend? Such as sharing driver frequencies and answering questions for out of town hams in the area for the weekend.

Also, is there any kind of live conversation from the track during the race on any of the local repeaters?

Having worked in retail for most of my life, these are thoughts that have never entered my mind until this year.

Date: 2007-05-25 02:08:03 UTC
From: Bob Burns W9RXR
Topic: 894 Message: 895

In the past, a group of hams have operated a special event station at the track. They use the callsign W9IMS. If you do a QRZ look-up of that call, here is what they have posted for 2007:

** 2007 SCHEDULE **

Indy 500 - May 12, 13, 18, 19, 20, 24, 25, 26, and 27; USGP - June 15, 16, and 17; Brickyard 400 - July 27, 28, and 29. Our intention is to operate from 1500Z through 0300Z on Friday, Saturday and Sunday of the race weekends. There may be ad hoc operations starting the weekend before and during the week leading up to the race weekend. But other than the weekend of the event itself operation will be at the sole discretion of individual ops.

** FREQUENCIES **

W9IMS will operate on or near: 1.840, 3.840, 7.240, 10.140, 14.070 PSK31, 14.240, 18.140, 21.340, 28.340, 50.140, 144.240 SSB and 146.52 simplex FM. Watch for packet spots at sites such as DX Summit <http://oh2aq.kolumbus.com>http://oh2aq.kolumbus.com

** QSL INFO **

There is a full color custom four-sided QSL card available for EACH race. There is a certificate on heavy photo paper available for working ALL three races. The cost for printing these comes out of our own pockets, so we must insist on an SASE for QSL cards and an SASE and a $1 for certificates! Any donations are GREATLY appreciated and will go directly into the fund for printing new cards.

NON-USA STATIONS - QSL direct or via the bureau. If you want a certificate, then you must follow the directions below for USA STATIONS FOR CERTIFICATES.

SWL STATIONS - follow the directions for USA stations below and substitute an SWL report for the QSL card.

USA STATIONS FOR QSL CARDS - send your QSL card with an SASE (#9 or #10 Business Envelope -- our QSL cards are 3.5" x 5.5"). You may put multiple W9IMS contacts on one card and we will send you the corresponding QSL cards. i.e. If you list contacts for all three races, we will send all three cards back - MAKE SURE YOU PUT ENOUGH POSTAGE!

USA STATIONS FOR CERTIFICATE - send a listing of your contacts for the three different races along with a $1 and an 8.5" x 11" SASE. The certificate is on heavy photo paper.

From: Ray Andrews
Topic: 897 Message: 897

One correction to the info about the special event station, W9IMS. The station does NOT operate from the track, but instead operates from a world-class, multi-op contest station located on the NE side of Indy. During the negotiations with the IMS management to get permission to use the speedway logo, name, etc., track officials made it clear that they did not want the operation to be set up at the track itself due to RFI concerns.

This is the 4th year of operation of the station & I have had the privilege of visiting & operating the station on several occasions.

W9ILF and I will be at Johnson County Park at 10AM on Monday to have some fun playing radio in the outdoors (unless we're having thunderstorms).

We plan on meeting at the Beech Shelter (http://www.johnsoncountypark.com/johnsonpark.htm) at about 10AM if the shelter is occupied, we'll just find another one nearby. Jo Co Park has dozens of them.

If you want to join us, feel free!! Bring some food to throw on our grill and make half a day of it. Also, the brand new public shooting range is supposed to be open...so bring your guns, ammo, and ID down to try out the new 2 million dollar range...if you are so inclined.

Rigs will be the KX-1 and hamstick assortment from KB9BVN (that'd be me) - I'll also have my antenna analyzer with me in case you want to do something random in the weeds with wire and stuff. I am also bringing my gas grill.

Come on down!

We plan on meeting at the Beech Shelter (http://www.johnsoncountypark.com/johnsonpark.htm) at about 10AM if the shelter is occupied, we'll just find another one nearby. Jo Co Park has dozens of them.

If you want to join us, feel free!! Bring some food to throw on our grill and make half a day of it. Also, the brand new public shooting range is supposed to be open...so bring your guns, ammo, and ID down to try out the new 2 million dollar range...if you are so inclined.

Rigs will be the KX-1 and hamstick assortment from KB9BVN (that'd be me) - I'll also have my antenna analyzer with me in case you want to do something random in the weeds with wire and stuff. I am also bringing my gas grill.

Come on down!

The range is operated by the Indiana Department of Natural Resources.

The area of the shooting range is called the Atterbury Fish and Wildlife Area.

http://www.in.gov/dnr/fishwild/publications/att.htm

I didn't see much on the website about the range, so you'll probably need to call the DNR.

Hmmm...I just found an article from the Johnson County Daily Journal...the range will be officially dedicated on May 29th. So I was wrong about it being opened this weekend. The range is being dedicated in the name of Whiteland resident Sgt. Joseph Proctor, who was klilled in Iraq.

"...A dump truck loaded with 350 pounds of explosives was bearing down on a barracks housing U.S. troops. Proctor realized this and opened fire on the driver, killing him and bringing the truck to a stop.

Seconds later, the truck exploded, killing Proctor and a Marine Corps captain instantly.

For his heroism, he was awarded the Silver Star, the Army's second-highest medal for bravery.

But the highest testament came from a Marine who served with him. Staff Sgt. Nick Miccarelli wrote in an online journal: "Sergeant Joseph Proctor need not be made more of in death than he was in life. In a world full of phonies, Proctor told it like it was.

"In his absence we mourn him, comforted by the knowledge that he died the way he lived: standing yards taller than his frame, with courage and strength."

On Tuesday, the state of Indiana will honor Proctor by naming the shooting range at the Atterbury State Fish and Wildlife Area for him. In the fall, New Whiteland will rename a park in his honor.

Even these acts, though, are small compared to what Proctor himself gave us.

This weekend, it's easy to get distracted by the 500 Festival Parade today, the 500-mile race Sunday and family picnics Monday.

Take a moment, though, to remember why we set aside the day. Think about the sacrifice that Joey Proctor and the many, many others like him have made so we can celebrate in peace...."

The range OFFICIALLY opens to the public on May 30th.

903. Boy oh boy...

Yahoo group: IndyHamRadio
Date: 2007-05-28 19:04:57 UTC
From: Brian - KB9BVN
Topic: 903 Message: 903

Man was that fun. W9ILF and I setup our stations at Johnson County Park at about 10AM, grilled some hot dogs, analyzed some antennas, hung a dipole, played with my hamstick collection, and had some QSO's. We also took part in a experimental Dorito project.

Don West W9DEW and his wife stopped in to see how we were doing, and we spent an hour just yapping about radio stuff in general. It was nice to meet you Don!

At about 1:30 we packed up and headed home. I had a good QSO on 30m with my KX-1 to the hamstick with KE4COH down in South Carolina, and Ivin was working a guy in the Poconos on 40m. The QSB was ruff on all the bands we tried, but we had successful QRP QSO's running off batteries and less than super efficient antennas.

I was thinking we ought to make this a monthly event. Anyone else want to try it?

Yes we had a nice day out portable. The hot dogs were great, the Doritos were so-so.

I am always thinking of a good portable station, but I rarely actually work portable. I would love to try to get things going monthly and see how it goes.

I can't wait to try out my fishing pole doublet and I have been dreaming about a Pacific PAC-12 portable vertical.

I was having trouble with my internal keyer in my Icom 703, but now that it is back home in the house it is working fine again. I wonder if it was the humidity???????

It sure was a fun time!

907. For Sale Rohn - Spaulding tower

Yahoo group: IndyHamRadio
Date: 2007-06-03 21:14:37 UTC
From: Ivin Flint
Topic: 907 Message: 907

I am moving on a Rohn-Spaulding "Strato-Tower". The
tower is 64 ft high It comes with a triangle base that
allows the tower to tilt over, and three bladed posts.
One post is bent just a little and there is concrete
on the posts. I broke some of the concrete off, so
with a little work it should all come off just fine.

I live just outside of Eminence,IN between Terre Haute
and Indianapolis.

I am asking $200.00.

Please e-mail me at ivinflint@...

Thanks
Ivin W9ILF

From: David Spoelstra
Topic: 916 Message: 917

Actually the question is not that hard because there are not that many clubs. I think I'm a member of almost all of them. Here they are:

Indianapolis Radio Club - this is a general ham club with monthly presentations. It's one of the oldest in the nation and it's probably the one you want. www.indyradioclub.org

Hoosier DX and Contest Club (HDXCC) - focuses on Contesting and DXing. www.hdxcc.org

RED CROSS DISASTER RADIO Group - focuses on Emergency Management.

Salvation Army Team Emergency Radio Network (SATERN) - another emergency group. www.hcars.org/satern

Indianapolis Carmel Experimenters (W9ICE) - this one I don't know anything about. Maybe someone else can jump in here. www.w9ice.com

Indiana Department of Homeland Security Ham Team (IDHS-HT) - another emergency group. This one is by invitation only. www.in.gov/dhs/ardc

Indianapolis Motor Speedway Amateur Radio Club (W9IMS) - this one is also by invitation only. They put on the special events for the Indianapolis Motor Speedway - the Indy 500, the USGP, and the Brickyard 400. Look for us on-the-air tonight doing the USGP! www.w9ims.com

There are a few others in outlying counties. Here's the only list I know about - www.indyhams.org/seg/clubs

If someone knows about any others, please jump in here!

-David, N9KT

David, that's a great list. One change/deletion would be the Red Cross Disaster Radio Group. It disbanded about 6 months ago.

73,
Ken
KC9GLQ

Subject: Re: [IndyHamRadio] Which Indy ham club to join?

Actually the question is not that hard because there are not that many clubs. I think I'm a member of almost all of them. Here they are:

Indianapolis Radio Club - this is a general ham club with monthly presentations. It's one of the oldest in the nation and it's probably the one you want. www.indyradioclub.org

Hoosier DX and Contest Club (HDXCC) - focuses on Contesting and DXing. www.hdxcc.org

RED CROSS DISASTER RADIO Group - focuses on Emergency Management.

Salvation Army Team Emergency Radio Network (SATERN) - another emergency group. www.hcars.org/satern

Indianapolis Carmel Experimenters (W9ICE) - this one I don't know anything about. Maybe someone else can jump in here. www.w9ice.com

Indiana Department of Homeland Security Ham Team (IDHS-HT) - another emergency group. This one is by invitation only. www.in.gov/dhs/ardc

Indianapolis Motor Speedway Amateur Radio Club (W9IMS) - this one is also by invitation only. They put on the special events for the Indianapolis Motor Speedway - the Indy 500, the USGP, and the Brickyard 400. Look for us on-the-air tonight doing the USGP! www.w9ims.com

There are a few others in outlying counties. Here's the only list I know about - www.indyhams.org/seg/clubs

If someone knows about any others, please jump in here!

Hi folks,

I've been here locally for about 17 years, but have never joined a local club. Anyway, I'm looking for a recommendation on a club to join. I guess I'm most after one that emphasizes equipment, experimenting, digital modes, etc. Loaded question, I know....kind of like asking: "what's the best radio?..."

Thanks in advance,

Brad Knapp

Hi Brad,
You can learn quite a bit and meet some nice people at clubs. There are links to several clubs on the "links" page of the web site. Let me know if you find any that are out dated.

You may want to add the Hamilton county club to your list for consideration. They meet the First Saturday of the month at the Noblesville EOC. Its a good group with an abundant list of public service projects that need extra volunteers.

924. Civil Air Patrol Mission Announcement

Yahoo group: IndyHamRadio
Date: 2007-06-20 01:07:34 UTC
From: Don West
Topic: 924 Message: 924

Indiana Hams,
As part of an emergency exercise, SONS 07 (Spills of National Significance) related to the New Madrid Seismic Zone, amateur radio and the Civil Air Patrol will be launching a simplex repeater on a balloon expected to reach 75,000 feet. You must register to participate. It will be launched from Mo. at 0830 tomorrow morning. It will cover a circle approximately 676 miles in diameter. You should be able to work it if you are in the circle with an HT and 2 watts.

Find the details at:
http://kcnorthares.org/arhab/

I hope to work it from the Indiana Government Center if the wind is right.

73,
Don, W9DEW

929. Please Welcome a New Member, Tony, W9AL

Yahoo group: IndyHamRadio
Date: 2007-06-21 01:21:54 UTC
From: Don West
Topic: 929 Message: 929

Hey Guys and Gals,

I am pleased to announce that we have a new member, Tony Langer, W9AL from North Judson, IN, in the northern part of the state.

Tony has just recently (the past 3 weeks or so) accepted the position of State ARRL Section Emergency Coordinator, formerly held by Dave Pifer, N9YNF.

I had the good fortune recently to have lunch with Tony in Lafayette. (I am not Italian and know nothing of what Italian food should taste like, BUT if you are ever in Lafayette on 26 near I65, try a place called "Spaggeddies", mmmmmmm yum!) It is just across the street from the Olive Garden. Tony is still in the "taking input" phase, and formulating his strategies. (At least he WAS before I started yacking to him.)

Tony is new to the position, but not to Emergency Service, so do not be too rough on him.

Let's all give Tony a rousing IndyHamRadio Welcome!

Best Regards to all,
Don, W9DEW

From: Don Evilsizor
Topic: 929 Message: 931

Thanks to Tony/W9AL for jumping in where help is needed to fill
the ARRL SEC position.

But, Tony is also one of the key players as a net control for the
Indiana Traffic Net (ITN) too. You can show him more support by
checking into one of his net sessions...he is a net control on
Thursday mornings at 0830 on 3910 khz where you can hear
his booming voice.

The ITN has 2 sessions daily 7 days per week on 3910 khz,
0830 AM and 4:30 PM. All are welcome to check in that can
work HF. Don't be bashful and you will not be forced to take
traffic if not comfortable doing it.

The ITN serves more or less like a family for the entire Hoosier
state and one gets to know many of the operators.

NEW SUBJECT:

Best to all and have fun on Field Day. The Whitley County
Amateur Radio Club (WCARC) will be operating from the
QTH of KA9QWC & WB8ORR again this year. We plan to
operate as a 2A station and if time permits maybe a couple
of us will try some 2 & 6 meter activity. Our club callsign is
WC9AR.

Tony has just recently (the past 3 weeks or so) accepted the position
of State ARRL Section Emergency Coordinator, formerly held by Dave
Pifer, N9YNF.

I had the good fortune recently to have lunch with Tony in
Lafayette. (I am not Italian and know nothing of what Italian food
should taste like, BUT if you are ever in Lafayette on 26 near I65,
try a place called "Spaggeddies", mmmmmmm yum!) It is just across
the street from the Olive Garden. Tony is still in the "taking
input" phase, and formulating his strategies. (At least he WAS
before I started yacking to him.)

Tony is new to the position, but not to Emergency Service, so do not be too rough on him.

Let's all give Tony a rousing IndyHamRadio Welcome!

Best Regards to all,
Don, W9DEW

Pinpoint customers who are looking for what you sell.

932. Field Day Invitation

From: Brian - KB9BVN
Topic: 932 Message: 932

Ivin W9ILF and I will be operating tomorrow and tomorrow night (depending on WX) from the Johnson County Park near Franklin Indiana. We'll probably use his callsign since it is easier to send than mine. HAHAAH

Come on down and join in on the fun if you get a chance. We'll be running QRP from a K2 and IC703 and my KX1 using wire antennas and PAC-12 verticals. (I know, we're gluttons for pain) One of the rigs will be equipped with a microphone (EGADS!!!) on HF and we'll have a 2m station setup as well...may even be running some PSK31 and RTTY.

Bring a lawn chair and some cool drinks and join in on the fun!

934. New antenna

Yahoo group: IndyHamRadio
Date: 2007-06-23 02:23:35 UTC
From: Brian - KB9BVN
Topic: 934 Message: 934

Well I got the PAC 12 vertical antenna kit in the mail on Thursday and slapped it together in less than an hour this evening, it tunes pretty well on 15m through 40m (didn't try 10m). I bought the multiband coil version that uses a clip on jumper on the coil so you can change it around for different bands. So I setup the KX1 and my paddles on the deck this evening and planted the antenna in the back yard. Heard lots of stations, some weak and some strong on 40m...but could not get a QSO to save my life. QSB was tough sledding so I moved to 30m and only heard a couple stations...20m yielded a couple very weak stations (one was in Oregon), and 15m was dead from top to bottom.

So I left it all set up for a try in the morning. May take it to my little field day too.

The kit went to gether very quickly and easily, John supplies ALL the parts you supply a soldering iron, solder and wire strippers. It was just that easy. The multiband coil is very well thought out, the PVC tube is wrapped with tinned 18g copper wahr, and the PVC tube has been machined with the grooves all up and down it so you can not screw it up unless you work very hard at it. He even includes 8 radials with the antenna kit.

All in all, the jury here is still out....I will be so glad when we start seeing better conditions.

Everyone have a fun filled and safe Field Day tomorrow.

937. ...and then the rain set in...

Yahoo group: IndyHamRadio
Date: 2007-06-24 22:01:38 UTC
From: Brian - KB9BVN
Topic: 937 Message: 937

Ivin W9ILF and I were holed up at Johnson County Park near Franklin Indiana, which is 20 minutes away from my home. We left my house loaded for Field Day at about 1PM. We got a late start because it was raining..and we were waiting for it to stop for a few minutes so we could drive to the park and get situated. I think the first official station in the logbook was N4TP from WCF at 19:11Z...so a little after 3PM local. The sun came out and all was well. I was working 20m with my PAC-12 and the KX1 and managed to work both coasts and top to bottom of the US with about 4 watts...very nice, things were getting good. Ivin had his IC703, PAC-12 and G5RV, and we started working 80m with that at about 7PM. The QIN net came up at 8PM and we had to wait an HOUR to get our RADIOGRAM sent to the IN section manager. By that time, the rain started again, and man it poured. So we stayed on 80m and had a great run going until we finally quit for the night somewhere near 1AM. I drove home and slept in my bed, Ivin slept in his tent at the campsite, enjoying the pitter patter of a thunderstorm. We were officially visited by Don West W9DEW and Andy Murrey N9AWM.

Murphy was ever present. We had intended to run PSK...I brought my laptop, Ivin had his rigblaster...I forgot the computer power supply and my laptop battery won't hold a charge. We had hot dogs, but we forgot the grill. We were going to take pictures, but forgot the camera. We had coffee, I forgot my cup...but that's OK...we were about out of fuel for the stove anyway. Video tape of me trying to throw a rock with a rope tied to it would be priceless, and very embarassing...Ivin tried to show me the "between the legs" rope throwing trick and almost broke his ankle when he hit himself in the ankle with a rock, what had a rope tied around it. Somehow we managed to get that G5RV almost 20 feet off the ground...it worked 80m very well for us. It was raining still. Andy N9AWM saved out life at about 11:30PM on Saturday night, he brought us a grill and my laptop power supply....so we ate hot dogs in the pouring rain...and watched it lightning...while we worked 80m for all we were worth.

At 6:30AM I went back to camp and we worked a few more stations on 80m and 40m with the PAC-12 and the G5RV, dining on a fine selection of grilled smoked turkey sausage, and hot coffee...we called Diz (W8DIZ) on the phone and tried to work him on 20m..but nothing doing. Diz checked WX radar for us and advised us that it would be raining for about 40 more days and 40 more nights...so we took the non-raining opportunity and packed up and pulled out at about 10:30 this morning.

All in all we scored 790 points. Weeeee and had even more fun.

We hope to be with the Flying Pigs next year.

940. Field Day Photos

Yahoo group: IndyHamRadio
Date: 2007-06-24 23:45:11 UTC
From: Brian Murrey
Topic: 940 Message: 940

Hey everyone, I just finished uploading a new and exciting (hahaha) collection of pictures from the W9ILF Field Day team. The G5RV was suspended between a couple of trees, the best we could do was throw the rope/rock over a limb about 20 feet high...we're pathetic. To add special effects, we had the feedline propped up with a old stick we found and used a big hunk of broken concrete to hold the contraption in place.

Don't ask us how it worked, we only know that it did work.

So go to Yahoo Groups, sign in, and go to the photo section of the IndyHamRadio group and feast your eyes. Ivin really slept in that tent, in the rain, with the racoons waiting to swoop in and eat his cookies...I skipped out and slept at home.

That is great!!! I have been enjoying the pictures
and your write up all afternoon!

I'm going to mail you two copies of the message we
sent to K9ZBM. One you can keep with our paper log in
case you need it and one to send in for credit. I'll
drop it in the mail tomorrow.

It was cool that someone asked about how we set up the
G5RV! I did check into the QIN this evening. James
Sellers K9ZBM checked in. That is a surprise. I have
never heard him on QIN before. Anyway I got to tell
them a little about field day.

Thanks for doing a great job of posting pics and
letting the groups we belong to know about our great
adventure!

I can't wait til we go out again!

When it rains for 40 days and 40 nights you are supposed to collect 2 radios of every manufacturer and stick them in your boat.
At least that is what I would have done just to be safe!
Glad to hear you guys had so much fun at the park.
Perhaps next time I will stop by and see what a real portable station looks like.

Isn't that the way it goes? After 60 days of severe drought it starts raining on field Day. Fortunately we (Henry County ARC) were inside at the Henry County FOP lodge building. We had a great time, made a lot of contacts (for us a lot) but the best part was the most awesome burgers of all time made by the Jackson-Cantrell burger company. (KA9QIG and KB9VZU).

We had a great time.

945. [IndyHamRadio] WCARC FIELD DAY WAS COOL

Yahoo group: IndyHamRadio
Date: 2007-06-25 19:56:18 UTC
From: Don Evilsizor
Topic: 945 Message: 945

My personal take on Whitley County Amateur Radio Club (WCARC).

We started with breakfast at Richards Restaurant in Columbia City
at 0730 and believe there was a total of about 10. After that event
we all drove out to our ranch and proceeded to set up our 2A station
and related equipment.

There were a few lite sprinkles Sat morning but not enough to keep
us from completing the setup or off the air. At 1830 hours local we
dove into the chow and that was just super to include plenty of
deserts including ice-cream. Afterall it was a N9QCL birthday and
I read the message taken from ITN earlier.

We had a dipole & G5RV up about 45 feet or so. There was plenty
of operating fun and getting used to different HF rigs. With less than
2 hours to go a couple of us decided to dust off my old Kenwood 9130
2 meter all mode rig and give it a shot. By the time we got set up
and found the beam had came apart that was in storage it was getting
down to minutes. So I grabbed another 2 meter beam out of the barn
loft and with about 15 minutes to go ran some tests. With 5 minutes
to go I contacted a station near the airport in Fort Wayne on SSB.
We did not count that one but at least know the old rig still works
even if not right on frequency 100%.

Sun morning it rained until probably noon and it was real comfortable
and pleasant to operate being cool. When the rains came we had to
tarp the 2nd station shelter as it was a sun screen type.

We probably did not break any records but new ops got a chance
to get some experience under senior guidance with our callsign of
WC9AR.

948. 2 free tkts for Indy Ham Fest

Yahoo group: IndyHamRadio
Date: 2007-07-01 15:32:59 UTC
From: Ken Bandy
Topic: 948 Message: 948

Hello all. After finding out that my schedule was not what I thought it was, I realized that I bought two tickets for the Indy Ham Fest that I'm not going to be able to use. The show is this Saturday, July 7, at Camp Sertoma, on the East Side of Indy. Here is a URL for the HamFest, if you need it: http://www.indyhamfest.com/

Anyway, I would like to give these two tickets to a worthy ham or two. There is a catch (of course). I would like for these tickets to go to a ham that is going to take a young ham, or a kid interested in becoming a ham. In this case, "young" is defined as under 18 years old.

So, first person to tell me via email or phone (at 317-446-3312) that they will be taking a young person to the show gets 'em! I'll make arrangements with the "winner" to get the tickets. I live on the west side of Indy.

So, "come and get 'em"!

73,
Ken

949. Fun with Portable Verticals

Yahoo group: IndyHamRadio
Date: 2007-07-01 16:08:38 UTC
From: Brian - KB9BVN
Topic: 949 Message: 949

I think this PAC-12 portable vertical antenna is the best thing I have ever spent $105.00 on in a long long time. Yesterday, after mowing my lawn for the first time in 4 weeks, I set the PAC-12 up in the backyard and enjoyed some QSOing for FISTS on 14058 with my 4w KX-1 from my deck. Not too hot, not too cool...just right.

I played for about an hour or so, had several fine ragchews even though the solar stuff was SF:74 A:6 K1 almost all day. 4w into the little vertical netted me a total of 6 QSO's with FISTS members. Best DX was Oklahoma but I also covered MO, ME, KS, VA, and TX as well. Not bad. Signal reports were 599 to 449 with best from KC0JKD in California, MO. I didn't know there was a California MO!

If you have a small station that you like to work outside with, check out the PAC-12.

954. Hams needed for event....

Yahoo group: IndyHamRadio
Date: 2007-07-05 19:32:00 UTC
From: Brian - KB9BVN
Topic: 954 Message: 954

I got this in my email today....can anyone help?

My name is Bill Kirkland and I'm with the Indy Classic Marathon Organization. I took the liberty of contacting you via your information taken from the internet. I hope you don't mind that I open a dialogue with you regarding the upcoming marathon in Indianapolis. The Indy Classic Marathon organization is sponsoring the first ever Indianapolis Marathon on September 8th of this year. We are also sponsoring a half marathon and a 5000 meter walk. All of these race events are to support our military with an added benefit of hosting a running event to involve all branches of the military. The event will focus on all branches of the military coming together to compete in one major race, with military participants from active, reserve, retired, and veteran military personnel.
We are looking for a quote as to what your and/or your organization would require to provide Ham radio support for the Indianapolis Marathon. Specifically, we are looking for as many ham radios as possible complete with qualified operators and support equipment. The intent is to provide communications support to help coordinate and control the race courses and to provide a backup radio link for any marathon runners needing assistance should the primary medical teams' communications support depart the race course with an injured race participant. In addition, we are also looking for volunteers that can be available to support the race along the race courses, at the finish lines.
Should your organization be interested in supporting this historic event, please contact Mr. Joseph Williams at Indy Classic Marathon at 317-748-7489 or use the Indy Classic Marathon website to provide us a point of contact. When you contact the Indy Classic Marathon, please leave us an email commitment, point of contact information and follow up your commitment with a written quote for your services. Please use P.O. Box 361363, Indianapolis, In 46236 to forward your quote.
Please feel free to forward this email to those you feel would be interested. You can also contact me at 517-256-5626 if you need information immediately.

Sincerely,
Indy Classic Marathon

William C. "Bill" Kirkland
Marathon Operations Coordinator

From: Bob Burns W9RXR
Topic: 955 Message: 955

I've been exchanging email with a guy who is compiling the Carl & Jerry stories that John Frye W9EGV wrote for Popular Electronics back in the 1950's. Some questions have come up about Mr. Frye that I can't answer.

I know he lived in Logansport. Anybody know when he died? Anybody know how he came to be confined to a wheelchair? When he wasn't writing for magazines, what was his real job?

I see from the Indiana Section ARRL web site that Mr. Frye won the Indiana Radio Club Council Outstanding Amateur of the Year award in 1950. Does anybody know how he came to be given that award?

If you are interested in the Carl & Jerry anthologies, see http://www.copperwood.com/.

965. Outstanding Amateur

Yahoo group: IndyHamRadio
Date: 2007-07-22 08:33:39 UTC
From: Jack Parker
Topic: 239 Message: 965

IRCC OUTSTANDING AMATEUR OF THE YEAR 2007

The Indiana Radio Club Council is now taking nominations for the 2007 Outstanding Amateur of the Year award.

Each year one Hoosier Amateur Radio operator is selected to receive the award for outstanding service and dedication to Amateur Radio. The award will presented during the Ft. Wayne Hamfest in November.

Nominees will be judged on years in Amateur Radio, years in a service role, active in public service and active as a mentor to new hams. Also considered is participation as a ham radio instructor, volunteer examiner and whether this person actively recruits new hams, especially young people.

This is a basic criteria and your application should not be limited to just these areas. The more information the better.

Please include your nominees email address or telephone number for followup notification.

Nominations are due by midnight September 31, 2007.

E-mail your nomination to: w8ish@...

Jack Parker, W8ISH

IRCC Chairman

967. ARRL August UHF Contest, August 4 & 5

Yahoo group: IndyHamRadio
Date: 2007-07-22 22:42:31 UTC
From: Mark Thompson
Topic: 967 Message: 967

2007 ARRL August UHF Contest Rules

General Rules

Rules – 2007 ARRL August UHF Contest
Object: To work as many amateur stations in as many 2 degrees by 1 degrees grid squares as possible using authorized amateur frequencies above 222 MHz and all authorized modes of emission.
Date and Contest Period: First full weekend of August. Begins 1800 UTC Saturday, ends 1800 UTC Sunday (August 4-5, 2007). Entrants may use as much of this time as they wish.
Entry Categories:
3.1 Single Operator – Low Power
3.2 Single Operator – High Power
3.3 Rover.
3.3 Multioperator.
Exchange: Grid-square locator (see April 1994 QST, page 86 or www.arrl.org/locate/gridinto.html).
4.1 Exchange of signal report is optional.
Scoring:
5.1 QSO points:
5.1.1 Count three points for each complete 222- or 432-MHz QSO.
5.1.2 Count six points for each complete 902- or 1296-MHz QSO.
5.1.3 Count 12 points for each 2.3-GHz (or higher) QSO.
5.2 Multiplier: The total number of different grid squares worked per band. Each 2 degree by 1 degree grid square counts as one multiplier on each band it is worked.
5.3 Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score. Example: W1AW works W3CCX in FN20 on 222, 432 and 1296 MHz. This gives W1AW 12 QSO points (3 + 3 + 6) and also three grid-square multipliers. Final score is 12 QSO points X 3 multipliers, or 36.
5.4 Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
5.4.1 Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
Miscellaneous:
6.1 Partial QSOs do not count. Both callsigns, full exchanges and acknowledgment must be sent and received.
6.2 A transmitter, receiver or antenna used to contact one or more stations under one call sign may not be used subsequently during the contest period under any other call sign (with the exception of family stations). The intent of this rule is to accommodate family members who must share a rig, not to manufacture artificial contacts.
6.3 All equipment and antennas used by entrants must be owned and operated by amateurs. Use of non-amateur owned gear is not prohibited, but use of such equipment places the entrant in a separate category, ineligible for awards.

6.4 Contacts made by re-transmitting either or both stations, whether by satellite or terrestrial means, are prohibited. Frequencies regularly occupied by a repeater in a locality may not be used for contest work, even if the repeater is turned off.
Awards: Certificates will be awarded in the following categories:
7.1 Top single-operator High and Low power score in each ARRL Division.
7.2 Top single operator High and Low power score on each band (222, 432, 902, 1296 and 2304-and-up categories) in each ARRL Division where significant effort or competition is evidenced. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band achievement stickers.) For example, if W1AW has the highest single-operator multi-band score in the Atlantic Division and his 432-MHz score is higher than any other Atlantic Division single-operator's, he will earn both a certificate for being the single-operator Division leader and an endorsement sticker for 432 MHz.
7.3 Top multi-operator score in each ARRL Division where significant effort or competition is evidenced. (Multioperator entries are not eligible for single-band awards.)
Additional certificates may be awarded where significant effort or competition is evidenced.
Submission: Deadline for submission of entries for this contest is September 6, 2007.
8.1 Paper logs and properly completed summary sheets should be mailed to: August UHF Contest, ARRL. 225 Main Street, Newington, CT 06111.

977. Starting an Indiana 10 Meter net

Yahoo group: IndyHamRadio
Date: 2007-08-08 15:24:54 UTC
From: n9nwo
Topic: 977 Message: 977

I was thinking that with all of the Techs with 10m privileges now, why could we not have a 10m net?

The question would be what time would be best? Once the sunspot cycle goes up again is there a time that would have minimum DX (skip) so that we would just have a state wide net?

What frequency would be ideal?

N9NWO

Brian,

The HTX-10 is a 10m SSB/AM/FM transceiver, not just FM. I worked over 25 countries from my mobile with an HTX-10 before upgrading to a Yaesu FT-100 to complete DXCC on 10m mobile.

Some of the guys out in Hendricks County have been having an informal
10m net on Tuesdays at 8pm local time. Frequency is usually around
28.400 MHz USB. Listen to the FM net on 147.015 at 7:30pm to see
where the 10m net will be.

From: Don Evilsizor
Topic: 977 Message: 987

For anyone who may not have their 10 meter band running this morning
it seems in fair shape. Worked NY & NJ with ease on the G5RV antenna
on 28400 KHZ.

I just parked there and listened while doing chores, going in and out of
the house, had my speaker out in the hallway. Heard sigs from various
areas.

Don / KA9QWC

2007 September VHF QSO Party Rules

General Rules

Object: To work as many amateur stations in as many different 2 degrees X 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.

Date and Contest Period: The second full weekend of September. Begins 1800 UTC Saturday and ends 0300 UTC Monday (September 8-10, 2007).

Entry Categories:
3.1. Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.1.3. See “General Rules for all ARRL Contests Above 50 MHz” page 106 in the November 1999 issue of QST for power limits for Single Operator entries.
3.2. Single Operator Portable.
3.3. Rover.
3.4. Multioperator.
3.5. Limited Multioperator.

Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of grid square is required. Exchange of signal report is optional.

Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3-GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees X 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
5.4.2. Rovers who submit scores for the club competition must submit a separate summary sheet and log indicating QSOs and score if they make any contacts from outside of the club territory. The summary sheet should be clearly marked “for club competition only” and must be emailed separately to contests@...

Miscellaneous:
6.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
6.2. Only one signal per band (6, 2, 1 1/4, etc) at any given time is permitted, regardless of mode.
6.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.

Awards:
7.1. Certificates will be awarded in the following categories.
7.1.1. Top Single Operator High and Single Operator Low power in each ARRL/RAC Section.
7.1.2. Top Single Operator High and Single Operator Low power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator low-power all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator's, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
7.1.3. Top Single Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator Portable entries are not eligible for single-band awards.)
7.1.4. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
7.1.5. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
Top limited multi-operator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multi-operator entries are not eligible for single-band awards.)
7.1.6. Top scoring club in each club competition category will be awarded a gavel.
See "General Rules for all ARRL Contests" for club competition information.

Submission:
8.1. All submissions must be emailed to SeptemberVHF@arrl.org or postmarked no later than October 10, 2007. Paper logs should be mailed to Sept VHF QSO Party, ARRL Contest Branch, 225 Main St, Newington, CT 06111. Logs mailed or emailed after the submission deadline may be designated as check logs.
8.2. Stations that use computers to log must send the electronic log in the Cabrillo file format for entry into the results. Submitted electronic files must be in ASCII / text readable format. A paper printout of an electronically created log is not an acceptable substitute for the required log file.
8.3. Electronically submitted entries are considered signed.
8.4. Logs may be submitted via the special web applet at www.b4h.net/cabforms
8.5. All paper entries must include a fully completed summary sheet and a complete log of the contacts made.

Other:
9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)" November 2001 QST or at the Contest Branch Website at: http://www.arrl.org/contests

9.1.1For queries contact contests@arrl.org or (860) 594-0295.
9.3. Forms may be obtained by:
9.3.1. Downloading from the Internet at the Contest Branch Website:
http://www.arrl.org/contests/forms.
9.3.2. Sending an SASE to September VHF Form Request, ARRL, 225 Main St, Newington, CT
06111.

995. Upcoming Meteor Shower Can Be Boon for VHFers

Yahoo group: IndyHamRadio
Date: 2007-09-01 06:07:48 UTC
From: Mark Thompson
Topic: 995 Message: 995

Upcoming Meteor Shower Can Be Boon for VHFers (Aug 28, 2007) -- VHFers, particularly those interested in meteor scatter, should be on the alert Saturday morning, September 1, for what could be a rare opportunity of excellent propagation. At 1137 UTC (+/$B!](B 20 minutes), the Earth's orbit will cross through the dust trail of long-period comet C/1911 N1 (Kiess), which is expected to provide a short but active two hour outburst of bright (-2 to +3 magnitude) meteors radiating from the constellation Auriga. Predicted rates for this particular Aurigids vary from around 100 meteors per hour to up to 1000. If high rates are achieved, the meteors could provide "open-band" conditions during the peak times. It might certainly be worth a look on 2 meters (or higher) during the hour leading up to the peak and through the peak time period. The meteor radiant is ideally placed for North Americans, so the more stations that are active, the more people can take advantage
of what might possibly happen in the sky on Saturday morning. If conditions turn out to be excellent, the best mode for information exchange will be on SSB, keeping calls and transmissions very short and exchanging minimal information, such as signal reports or grids. As usual, the best frequency on 2 meters will likely be 144.200 MHz, with stations spreading out from there if conditions warrant. More information on this rare event can be found here. -- Information provided by Steve McDonald, VE7SL

Strange Lights: The 2007 Aurigid Meteor Shower08.08.2007

August 8, 2007: Will they come, or will they not? That is the question.
On Sept. 1, 2007, a flurry of bright and oddly-colored meteors might$B!=(Bemphasis on might--come streaming out of the constellation Auriga, putting on a beautiful early morning show for sky watchers in western North America: sky map.
Right: An early morning meteor over Italy in Nov. 2006. This is what an Aurigid might look like. Photo credit: Antonio Finazzi.
The source of the putative shower is Comet Kiess (C/1911 N1), a mysterious "long-period comet" that has visited the inner solar system only twice in the past two thousand years. In 83 BC, give or take a few centuries, Comet Kiess swung by the sun and laid down a trail of dusty debris that has been drifting toward Earth's orbit ever since. On Sept. 1, 2007, the dusty trail and Earth will meet.
But will a shower actually materialize? The answer lies in the unknown contents of the debris stream.
"We have so little experience with ancient debris from long-period comets," notes Bill Cooke of NASA's Meteoroid Environment Office (MEO) at the Marshall Space Flight Center. "Almost anything could happen$B!=(Bfrom a fizzle to a beautiful meteor shower."
Astronomers were first alerted seven years ago to the possibility of a shower by Finnish astronomer Esko Lyytinen and Peter Jenniskens of the SETI Institute in Mountain View, CA$B!=(Bboth are accomplished meteor forecasters who study the dynamics of cometary dust trails. Jenniskens has since teamed with Jeremie Vaubaillon of Caltech to refine the forecast using a debris stream model developed by Vaubaillon.
"We expect the outburst to peak at 11:36 UT (4:36 a.m. PDT) +/- 20 minutes on Sept. 1st," says Jenniskens. "The whole event should last about 2 hours and be visible from California, Oregon, Hawaii and the eastern Pacific Ocean."

Above: Earth at the time of the shower's predicted peak. Darkness favors sky watchers west of the Rocky Mountains. [Larger image]
An independent model of the debris stream calculated by Danielle Moser, a colleague of Cooke at the MEO, predicts a peak time of 11:26 UT. "That's in good agreement with Jenniskens and Vaubaillon," says Cooke. "However, our model predicts a mostly empty stream and a very weak shower."
"Personally, I think the meteor rate will reach 100 per hour at best," notes Vaubaillon, "but some colleagues are more optimistic, so, suspense, suspense!!!"
Earth has had at least three encounters with the debris stream in the past century$B!=(Bin 1935, 1986, and 1994. Unfortunately, few people were outdoors paying attention. The best observed encounter was in 1994 when veteran meteor watchers Bob Lunsford and George Zay of southern California witnessed a number of bright blue-green meteors emerging from Auriga. The brief shower was remarkable both for its conspicuous lack of faint meteors and for the vivid colors--characteristics that may be repeated on Sept. 1st.

Sign up for EXPRESS SCIENCE NEWS delivery

Meteors from long-period comets are of special interest for two reasons:
#1 -- Long period comets almost always take us by surprise. They linger in the outer solar system, hiding in the dark for thousands or millions of years, until their slow orbits turn them sunward and--in they plunge! Because of this surprise factor, long period comets pose a unique impact threat. Jenniskens and others are keen to study meteor showers from long period comets because the showers could be a "tell" that a comet is out there, and the orbit of the meteoroids can reveal where.
#2 -- Meteors from long period comets may be very primitive. Consider the following: Most meteor showers (e.g., the Perseids and Leonids) are caused by short period comets, which pass through the inner solar system every few decades or, at most, centuries. Their icy surfaces are frequently heated and vaporized by intense sunlight, and the comet dust they produce is correspondingly fresh. Long period comets, on the other hand, are rarely sun-blasted, and their surfaces may retain ancient substances formed by billions of years of cosmic ray exposure in the outer solar system. Flakes from this "pristine crust" may produce odd colors when they hit Earth's atmosphere.
Is that why the Aurigid meteors of 1994 were blue-green? Were they bits of pristine crust from Comet Kiess? Again, no one knows.
Jenniskens notes that another meteor outburst, the alpha Monocerotids of 1995, also thought to hail from an unknown long-period comet, was strange: "The alpha-Monocerotids penetrated 5 km deeper in the atmosphere than other meteors of similar size and speed and they had [an unusually] low content of sodium."
Right: Flight path of Jenniskens' airborne Aurigid observing campaign. [More]
To get to the bottom of some of these mysteries, Jenniskens and colleagues from the NASA Ames Research Center, Utah State University, the USAF Academy and elsewhere will board two private jets to observe the Aurigids from the clear air of 45,000 feet. They'll use spectrometers, cameras and telescopes to measure the velocity, penetration, and chemical composition of incoming meteoroids.
Bill Cooke of the MEO won't be on board, but he wishes the flyers well. "If this shower actually happens, they data they collect may tell us new things about an important population of meteoroids in the solar system. Plus, it would be a good show for people on the ground."
Sept. 1, 2007: The answers await.

1006. D-STAR Forum & Raffle of Icom IC-91AD HT at Peoria Superfest, Saturday, 9/15 @ 1 pm

Yahoo group: IndyHamRadio
Date: 2007-09-14 14:12:41 UTC
From: Mark Thompson
Topic: 1006 Message: 1006

There will be a D-STAR Introduction / Overview presentation this Saturday, September 15th at 1 pm at the Peoria Superfest. Attend the D-STAR forum to learn more about D-STAR digital voice & data technology and radios & repeaters available.

At the forum there will be a raffle for a new Icom IC-91AD FM/D-STAR 2m/70cm HT. You WILL need to present at the forum to be eligible to win.

There will be an announcement at the forum regarding plans for a new D-STAR repeater in Peoria.

145.67 MHz will be the D-STAR simplex frequency at the hamfest.

More details about the Superfest can be found at:
http://www.peoriasuperfest.com/

Look forward to seeing you at the D-STAR forum & the Superfest.

73, Mark, WB9QZB
Chicago, IL

You can learn more about D-STAR at:

Pirates
> in N/W Ind near Chicago, who are Pirates talking on the bands.
> 73 De Don KA9QJG

I heard the scurvy dogs in TN and NC on my mobile 10 meter.

I was tryin' ta find beacons and CW in the data portion of
the 10m band, and me heard voices. Me switched to AM mode
and, shiver me timbers, thar they were!

We need to use the bands, or we lose them. The data portion
of 10 meters is a pretty big chunk. I know the sun cycle
is bad for 10m propagation right now. But anyone near
Indy want to try a scheduled QSO in CW on 10m, and see
if we can get by with a ground wave?

1016. Call Sign and Sounds like a Ham , NOT

Yahoo group: IndyHamRadio
Date: 2007-09-26 07:28:44 UTC
From: Don
Topic: 1016 Message: 1016

I found something interesting and Thought Would share, I heard a Ham talking as He was driving through the Chicago Metro area on a large Repeater System , and when I am near the Computer , I Just look up the Call to find more info about the person to see If We might have something in common to talk about

I looked up His call WD9XAD On http://www.qrz.com/ and http://hamcall.net/call nothing Found , Sure looks like a Older Call and the Person talked like a Ham

But now days who knows so I went to the FCC Site http://fjallfoss.fcc.gov/reports7/

Top Search for Call sign Well it came up But NOT A Ham radio call, I doubt very much if it was the Person with the Non ham lic using it, But I found it interesting and Nice to learn something as We get older, it's just remembering it is the Problem Back in the Old Days We just took people at their word , But with the Internet I find things are not always what We think .

Is it possible you mis-heard him say WD9 "F" AD?

WD9FAD does indeed live in the Chicago area, and he
just renewed his license this month.

The letter "F" is known as a "fricative", and on
scratchy staticky sounding electronic equipment,
can come across as an "X".

There's a technical term for what electronics
can do to "F" and "S" sounds, but I don't know
what it is. It sometimes comes across as a
static type sound on various radios when someone
says an "S" sound.

re: possibly mishearing WD9FAD as WD9XAD.

Don, In my previous message, I did not mean to impugn/malign your equipment or hearing. As you heard it through a repeater, the possible garbling of a staticky "F" to "X" sound went through many steps (his mike, his mobile/HT, the ether, the repeater input, the repeater output, more ether, etc.) before getting to you.

I tried other combinations of common garbling, such as B/D/C, and the X to F is the one that seems to fit and make some degree of sense.

I agree that things aren't as the used to be, or seem to be, but I also subscribe to the old saying "Don't ascribe to malice when a plain ol' screwup/misunderstanding is likely."

Just watch the DX packetcluster some time to see just how far people can get from the real callsigns on 'phone. Especially during contests. It's pretty funny.

There seems to be less of this on CW but now that quite a few people who can't really copy CW seem to be using computers to decode it, there are more and more busted calls on CW too.

I watched a weak DX station on RTTY using my PK232DSP a couple weeks ago and it gave me a different callsign printout every time he sent his callsign. I never was sure who it was.

From: Ray Andrews, K9DUR
Topic: 1017 Message: 1020

If you go to the FCC web site & look up the rules for what call signs are NOT available for use, you will find that rule #4 excludes "Any 2-by-3 format call sign having the letter X as the first letter of the suffix." These calls are not assigned to the Amateur Service, but to the Experimental Radio Service.

When I was attending Lawrence Central High School in the early 60's (I'm showing my age here.), we participated in a program called Midwest Programmed Airborne Television Instruction (MPATI). MPATI was based at Purdue University and operated a fleet of 2 modified DC-6's out of the Purdue Airport. Each DC-6 was equipped with a fold-down television transmitting antenna which was folded up against the belly for take-off & landing, and extended downward during flight. Each aircraft carried 3 complete TV stations on board, 2 for programming, & 1 spare. Each school day, one aircraft circled at 30,000 ft over Monticello, IN, & broadcast instructional programming to high schools in parts of Illinois, Indiana, & Michigan. As you can guess, the project was prohibitively expensive & the flight portion of the project was discontinued. When I was at Purdue in the mid-60's, MPATI was still producing education programs, but they were being distribution by video tape. The point of this story was that I noticed that the TV station call signs looked like amateur calls at first glance. They were WJ2X?? (sorry, after 40 years, I don't remember the full calls).

By the way, WD9XAD is issued to Garmin, the makers of GPS receivers, at their flight test facility in Olathe, KS. The authorization is for a period of 6 months & expires next February.

1022. D-STAR Overview/Introduction, Kalamazoo Hamfest, Sunday, October 14th @ 11am

Yahoo group: IndyHamRadio
Date: 2007-10-01 20:11:20 UTC
From: Mark Thompson
Topic: 1022 Message: 1022

I will be presenting a D-STAR Introduction/Overview presentation at the Kalamazoo hamfest on Sunday, October 14th at 11 am.

I am anticipating that many Michigan D-STAR repeater owners & operators can attend the D-STAR forum so that they can describe their systems after my presentation and meet hams from their areas.

You can get more details about the hamfest at:

http://www.kalamazoohamfest.com/

At the hamfest I will be monitoring 145.67 D-STAR simplex & 147.435 MHz (107.2 Hz decode) FM simplex and you can also reach at my mobile # 847-867-2774.

I look foward to seeing you at the fest & the forum.

73, Mark, WB9QZB
Chicago, IL

1023. Daylight-saving time controversy marches on and on

Yahoo group: IndyHamRadio
Date: 2007-10-02 20:38:59 UTC
From: Don
Topic: 1023 Message: 1023

Hello I hope Everyone is Doing well , I know this Time Change is Important to some of our users Here is some of the changes and a Commentary

73 De Don KA9QJG

The latest chapter in Indiana's saga over time begs the question: Will it ever end?

The latest chapter in Indiana's saga over time begs the question: Will it ever end?

The federal government seemingly hopes it does.

The U.S. Department of Transportation recently ruled that five more counties that were allowed to switch from the Eastern Time Zone to the Central Zone in 2006 could now switch back.

The agency included this sentence in its news release:

"In its decision, the Department will not consider petitions for time zone changes in Indiana for at least one year in order to minimize disruptions and allow DOT and the communities to assess the impact of the changes."

One might interpret that as bureaucratic speak for: "Enough is enough! We're tired of dealing with your time feuds."

The clash over clocks in Indiana has dragged on for so long, it's almost part of Hoosier culture.

Some say the most recent twist is a sign it's winding down. Others believe it will keep on keeping on.

One thing's for sure. The latest chapters have been bizarre.

They began when the General Assembly, after an intense lobbying push by Republican Gov. Mitch Daniels, passed the 2005 law that mandated all of Indiana observe daylight saving time. The law required Daniels to petition the U.S. DOT to consider time zone changes in Indiana, and the agency responded by saying it was up to each county to ask to switch.

Seventeen counties, most in southwestern and northwestern Indiana near pockets of those already on Central time, responded by asking to be moved from the Eastern Zone to Central. The federal agency, which says it bases its decisions on "convenience of commerce," allowed eight to switch.

After the change, seven of those eight ultimately asked to be switched back: Pulaski County in northwestern Indiana, and Daviess, Dubois, Knox, Martin, Pike and Perry counties in southwestern Indiana.

Daviess, Dubois, Knox, Martin and Pike counties filed a joint petition. Officials said that after time changed, a groundswell of support pushed to go back. Among other things, they said there were inconveniences for some commuters and businesses and a realization that it was better to be on the same time as Indianapolis and Louisville, Ky.

Daniels wrote the Transportation Department supporting the new request, along with that of Pulaski County. Perry County later filed a separate petition seeking to go back to Eastern if the other five in the southwest were allowed to.

The feds are allowing Pulaski County and five of six southwestern counties to go back on Eastern time. But it rejected Perry County's request, saying it was more oriented to Central time.

Got all that?

Daniels issued a news release essentially applauding the latest federal decision.

"We now have the highest number of Hoosiers ever on the same time yearround," he said.

But some county commissioners and lawmakers say that the daylight-time law Daniels pushed so hard for sparked new confusion and fiercely divided the clock debate.

"It shouldn't have been bothered with to start with," said Martin County Commissioner Mike Dant. "That's where the governor dropped the ball."

It's hard to imagine an end to the saga.

1041. Repeater Change for Henry County Nets

Yahoo group: IndyHamRadio
Date: 2007-10-09 22:09:16 UTC
From: Robert Griggs
Topic: 1041 Message: 1041

To All:

It was discussed tonight at the Ashland Amateur Radio Technical Society Meeting to move the Nets over to the 145.45 Repeater. Everyone in attendance was in favor of the move. The reason for this move is the fact that the 147.36 is having some receive issues. I was unable to hear or key the repeater at the old brooks plant last night in mount summit on a ht1000. So until things can be corrected with the 147.36 repeater we are going to move the Wednesday night net and the Skywarn net to the 145.45 repeater. The 147.36 will be the back up repeater. The 145.45 repeater does have a PL of 131.8 Hz.

Robert Griggs, W9MKA

Bob,

I will answer this one for Rob. We basically voted this evening to move all operations to the 145.450 machine, this is because of several issues with the .36 machine at this minute. So yes, you should change the record for Henry County on your map. I maintain the State of Indiana Skywarn map. It has the latest information available on it also. You might notice on my map I don't list Tipton County on it cause they don't use the Anderson Repeater (146.820) for their Skywarn activity... Wanting on word from them on what they use now. You can view the state map here http://www.hcarc.org/skywarn.png ....

1045. Wanted: Ten Techno-savvy Hams

Yahoo group: IndyHamRadio
Date: 2007-10-11 01:23:36 UTC
From: Don West
Topic: 1045 Message: 1045

As part of an effort to bolster the role of Amateur Radio in support of emergency communications, the Response and Recovery Division of the Indiana Department of Homeland Security is encouraging the voluntary development of a set of recommended technology and protocols for all EMAs in Indiana.

I have been authorized to seek a volunteer from each district to be part of a working group to develop a set of recommendations. We will be asking our EMA Directors to solicit volunteers and make recommendations from each IDHS district in the near future.

It is my hope that much of the discussion can be done on this Yahoo Group to permit as much participation and comment as possible. A conference bridge will also be available to the members of the group to facilitate this process.

This is not an effort to dictate any standards, but rather an opportunity for those how know the best methods of emergency communications to promote improved interoperability on a statewide basis. (With luck, we may be able to get our neighboring states on-board with the concept, as well.)

Candidates should be well versed in the technology of all modes (in particular digital modes) and more interested in achieving consensus than victory.

If you or someone you know would be a good candidate for this group, please contact your EMA Director with your recommendation.

Thanks and 73,
Don, W9DEW
Communications Director,
IDHS

From: Shawn Tovey
Topic: 1046 Message: 1046

I am the assistant director of a new club in called the Jackson County Amatuer Radio Technical Society. We are currently building our club from scratch with the help of some local hams.

We have been allocated a spot on the WQKC tower in Freetown IN at 250'. There is already an antenna as well as good feedline. We have 2 good Motorola radios, amp, and controller. The cans we have unfortunately is designed for VHF commercial with a split of more than 1.5 MHz.

We are in need of a set of cans for our 2 meter repeater. We are trying to find out if there are any for sale at a good price. We are also trying to find out if there are any grants to help out with costs. We have submitted membership paperwork to various emergency programs such as RACES, ARES, and SATERN.

Please let me know if there is any information that can help.

Be well and 73,
KC9LII, Shawn

Before you spend a lot of money and effort on hardware for your repeater, do you have a coordination for a repeater pair? Whether you are using an existing coordination or looking for a new coordination, you should get in touch with the Indiana Repeater Council to make sure your repeater is coordinated.

Secondly, isn't that the tower that the Indianapolis-Carmel Experimenters use for their link back to the 146.97 repeater system that is used for Skywarn? If so, you may want to get in touch with them to make sure your efforts and their efforts don't interfere. Get in touch with them anyway as they are a great bunch of guys who have been building repeaters for many, many years.

Yahoo group: IndyHamRadio
Date: 2007-10-12 13:08:09 UTC
From: Rick Nicholson
Topic: 1046 Message: 1050

Hi Bob and Shawn

Of course frequency coordination is a good thing for all, I did notice that the freetown link thaty ICE has up is not coordinated for the frequency they are using. It appears they are using a simplex frequency as a repeater frequency and linking back to indy on another frequency. I believe both should be coordinated and abide by the fcc bandplan.
It sounds like it's something that needs to be worked out.

Good luck to both parties

Rick,

One minor point. There is no such thing as an "fcc bandplan". The published band plans are not mandated by the FCC. Rather, they are gentleman's agreements worked out by cooperation for best use of the available spectrum. However, adherence to the generally accepted band plans is considered by the FCC to be "good amateur practice".

GET ON THE AIR WITH JOTA

Jamboree on the Air will celebrate its 50th year this weekend when it gets on the air October 19-21. Normally a 48 hour event, this year's JOTA will be 50 hours long in recognition of the anniversary. The fun begins at 2200 (local time) October 19 and ends at midnight (local time) October 21.

An on-the-air operating event sponsored by the World Scout Bureau, JOTA was founded in 1958 by Les Mitchell, G3BHK. It has grown to become the largest international Scout event. More than half a million Scouts and Guides in more than 100 countries participate in JOTA, involving as many as 10,000 Amateur Radio stations. The event relies on the Amateur Radio community and local hams for its success. Getting Boy and Girl Scouts (including Cubs and Brownies) on the air to talk with other Scouts around the world provides a great opportunity to expose youth to Amateur Radio.

Some troops and clubs team up to make a big splash with lots of activities, radios and antennas, offering a variety of modes to experience. For others, JOTA provides an opportunity to coach a smaller group of Scouts and to just have fun talking on the radio. Scouts usually enjoy communicating by speaking into a microphone, but some radio amateurs are able to provide other modes, such as slow-scan TV or amateur TV, satellites, packet radio, RTTY or even EME!

For more information on the 2007 Jamboree on the Air, please visit the ARRL JOTA Web site <http://www.arrl.org/scouts/jota> where you can find general rules, suggested exchanges and recommended frequencies. There will also be a place on the ARRL Web site to tell your JOTA stories at <http://www.arrl.org/scouts/jota/Stories/>.

Saturday, November 3rd, 2007
Check out the …
Milwaukee Repeater Club SWAPFEST
… then, come across the street to: AES

• 8:30 A.M. to 3:00 P.M. – Meet the AES gang and see the Latest Equipment on display.

• 10:00 A.M. to 2:00 P.M. – Attend the first annual Great Lakes Area D-STAR* Forum presented by AES.

Hear about D-STAR New and User projects in other areas from our Special Guests:

Ray Novak, N9JA (D-STAR Introduction) • Kermit Carlson, W9XA; Chicago , IL
ICOM National Amateur Radio Sales Manager

Jim McClellan, N5MIJ; Dallas , TX • Tim Barret, K6BIV; Mt. Diablo, CA

FRRL (Fox River Radio League) • NSRC (North Shore Radio Club) • Milwaukee D-STAR group

*D-STAR (Digital Smart Technologies for Amateur Radio)
A Digital Voice and Data protocol specification developed for use in amateur radio. D-Star compatible radios are available on VHF and UHF amateur radio bands. In addition to the over-the-air protocol, D-Star also provides specifications for network connectivity, enabling D-Star radios to be connected to the Internet or other networks. D-STAR is the result of research by the Japan Amateur Radio League to investigate digital technologies for amateur radio.

Milwaukee Repeater Club • 23rd Annual Swapfest
AMATEUR RADIO Fest2007
HAM RADIO, COMPUTERS & ELECTRONICS
Saturday, November 3rd, 2007
8:00 A.M to 2:00 P.M.
New LOCATION for 2007!!!

ELKS Lodge
5555 W Good Hope Road • Milwaukee , Wl 53223
Across the street from AES!

Admission: $6.00 • Extra Raffle tickets: $3.00 or (2) for $5.00
Table: $10.00 per 8 ft. table • Electricity: $5.00
Vendor Loading: 5:00 A.M.

AMATEUR RADIO & ELECTRONICS
New and Used Ham radios, CB radios, batteries, antennas, scanners, test equipment, parts, connectors, electronic components, tubes, wire, coax cable, switches, computers, software,

and more.

1067. Evansville Hamfest

Yahoo group: IndyHamRadio
Date: 2007-10-29 02:11:12 UTC
From: Neil Rapp
Topic: 24 Message: 1067

Dear Newsletter Editor or Amateur Radio Club Officer:

The Evansville, Indiana hamfest is quickly approaching. This year, we are trying to spread the word through the usual magazines and web sites, but we are emphasizing clubs and other hamfests this year. That's where you come in. We need your help! If you could, please announce the hamfest on your local nets, at your meetings, on your web site, in your newsletter, or any other way to notify other amateur radio operators and enthusiasts.

A printable flyer and web banner ad can be found on our web page, http://w9ear.org/hamfest.htm

If you would like to write a more detailed article about the hamfest, I have some information I can email to you.

For all 15 years of the EARS hamfest, we have provided one table free of charge to any area club when reserved in advance. We are continuing this tradition in order to help clubs work together. It is our hope that relations between ham radio groups continue to improve, and that this is a step in that direction. If your club has some equipment to sell or would like to provide an information table, please contact me ASAP to make your reservation. Chairs are also provided with each table.

Thank you so much for helping us promote the hamfest this year. If I can be of any assistance, please email ears@..., or call 812-333-4116.

73,

Neil Rapp WB9VPG
EARS Hamfest Chairman

Looks like Johnson County and southern Marion County hams are in for an upgrade of the 2m repeater system operated by the Midstate Amateur Radio Club.

http://www.midstatehams.org/

Good work guys! Makes me happy to be a member of MARC.

With this new location of the repeater system, we should now have coverage over virtually 100% of the county.

1070. Working the Satellites with Your FM Rig

Yahoo group: IndyHamRadio
Date: 2007-11-01 19:44:57 UTC
From: Mark Thompson
Topic: 1070 Message: 1070

November - a great mobile satellite month

Bob WB4AOR says November should be a great month for working Amateur Radio satellites from your Mobile FM rig.

There are 7 satellites you can work from your mobile FM rig, including PCSAT-1 which should fully recover by this weekend and last for 2 or more weeks. So now is the time to get going with live satellite contacts via these easy FM satellites, or setting up a SATGATE (Igate).

DOWNLINK SATELLITE

145.825 ISS APRS digipeater
145.825 PCSAT-1 (recovery expected 3 Nov)
145.825 ANDE-1 (re-entry expected next month)
435.225 GO-32 +/- 10 KHz and 9600 baud

435.300 AO-51 *FM Voice* +/- 10 KHz
436.795 SO-50 *FM Voice* +/- 10 KHz
436.795 AO-27 *FM Voice* +/- 10 KHz

As you can see, there will be over 40 passes per day with 18 for the 1200 baud satellites, 6 per day for the 9600 baud GO32 and 18 for the voice birds.

All 1200 baud pass times are between about 6 AM to 1800 local sun time in the Northern Hemisphere.

GO-32 and AO-51 voice birds are in the morning and evening, AO-27 is in the afternoon. It is trivial to know when to operate these birds WITHOUT A PC.
Please see the manual-tracking page:
http://www.ew.usna.edu/~bruninga/MobileLEOtracking.html

The packet path on 145.825 is VIA ARISS for all three satellites. The path for GO-32 is VIA 4XTECH and uses two different uplinks: 145.85 for APRS software and messages.145.93 for all Mic-E, D7 and D700 radios. That's more than one pass per hour on 145.825. Lots of contact potential from your mobile...

For APRS birds:
http://www.ew.usna.edu/~bruninga/pcsat.html
http://www.ew.usna.edu/~bruninga/iss-faq.html
http://www.ew.usna.edu/~bruninga/ande-ops.html
http://www.ew.usna.edu/~bruninga/GO32-ops.html

For AMSAT birds:
http://www.amsat.org/amsat-new/satellites/status.php

For many of these satellites, you don't even need a tracking program. Just a slip of paper on the dashboard... See:
http://www.ew.usna.edu/~bruninga/MobileLEOtracking.html

The best antenna is a 19.5" whip in the center of your roof. 5 dBi gain on the 2m uplink and almost 8 dBi gain for the very weak UHF downlink (above 25 degrees)...

Watch for special event info.

WB4APR, Bob

(Please note: Some of the links listed above appeared not to be working at the time of posting, but have been included on the hope that this proves to be a temporary problem - Richard - g4tut)

1071. Fw: Milwaukee D-Star Forum @ AES & Hamfest Near AES, Saturday, 11/3

Yahoo group: IndyHamRadio
Date: 2007-11-01 20:39:52 UTC
From: Mark Thompson
Topic: 1071 Message: 1071
Attachments: 2 described; binary payloads are missing from this source WARC

This Saturday morning, 11/3 there will be D-STAR forums sponsored by Icom hosted at AES in Milwaukee.

At the same time the Milwaukee Repeater Club is holding its hamfest across the street from AES.

Icom/AES D-STAR Flyer and MRC Hamfest Flyer are attached and also available at:

http://www.mrc91.org/

More information about the D-STAR forums is also in the attached email below.

The D-STAR simplex frequency at hamfest is 145.67 MHz and in the Milwaukee area the following D-STAR repeaters are on-the-air:

Milwaukee Area Digital Operators Group
Milwaukee

1072. N9QBO - SK

Yahoo group: IndyHamRadio
Date: 2007-11-02 01:57:17 UTC
From: Brian - KB9BVN
Topic: 1072 Message: 1072

I only met Vern a time or two, didn't know him that well, but we ought to take a moment a remember him for his bravery and service to his country, especially during the invasion of Normandy in 1944. May he rest in eternal peace.

Vernon D. Gill, 84, passed away Wednesday, Oct. 31, 2007, at Johnson Memorial Hospital in Franklin. He was a resident of Franklin.

He was born Jan. 29, 1923, in Montezuma. His parents were Otto Herman and Winnie Opal (Huffman) Gill.

Mr. Gill is survived by his daughter, Barbara Brownfield (Dennis) of Trafalgar; two brothers, Raymond Gill (Axie) of Montezuma and John Gill (Betty) of Belton, Texas; two sisters, Patricia Randolph (Ike) of Cape Coral, Fla., and Anita Lou Busenbark of Rockville; three grandchildren, Jeffrey (Dawn), Kip (Tina) and Troy Brownfield; six great-grandchildren; and several nieces and nephews.

He was preceded in death by his wife, Irene F. Gill; his parents; a son, Donald Bruce Gill; and two brothers, James Gill and Charles Gill.

He graduated from Montezuma High School.

Mr. Gill served our country in the Army for four years during World War II and was at the invasion of Normandy.

Mr. Gill worked for B&O Railroad for 10 years. He retired from Eli Lilly and Co. in 1980 after working as an engineer for 34 years.

An avid Mason, Mr. Gill was a member and past master of Bargersville Lodge 679. He also was secretary for 22 years. He was a past worthy patron 11 times of Eastern Star 470. He was a member of the Midstate Amateur Radio Club.

The Revs. Steve Fair and Jeff Johnson will conduct a celebration of life service at 10:30 a.m. Saturday at Wilson St. Pierre Funeral Service and Crematory, Vandivier-Tudor Chapel, 951 N. Main St., Franklin. Friends may call from 4 to 8 p.m. today at the funeral home.

In lieu of flowers, memorial contributions may be made to Fair Haven Christian Church, 1476 W. County Road 300S, Franklin, IN 46131; or to Homeview Health and Rehab, 651 S. State St., Franklin, IN 46131.

Hi Bob and Shawn

Of course frequency coordination is a good thing for all, I did notice that the freetown link thaty ICE has up is not coordinated for the frequency they are using. It appears they are using a simplex frequency as a repeater frequency and linking back to indy on another frequency. I believe both should be coordinated and abide by the fcc bandplan.
It sounds like it's something that needs to be worked out.

Good luck to both parties

1076. QIN Net Times

Yahoo group: IndyHamRadio
Date: 2007-11-05 14:42:41 UTC
From: Brian Murrey
Topic: 1076 Message: 1076

To all QIN Stations and friends,

QIN - The Indiana Section Traffic Net of ARRL NTS (QIN) after the switch from EDST to EST Sunday Morning will be as follows:

In a nutshell, the only time locally that QIN will shift anything will be the evening net from 8:00 PM to 7:00 PM, and locally, all the region and area nets will meet as they did before the time shift.

==========

The more detailed explanation in relation to UTC (or Zulu (z) time) follows:

QIN morning net will stay meeting at 9:30 AM locally but that means for UTC it will meet at 1430z instead of 1330z.

QIN evening net will stay UTC at 0000z but that means that locally it will meet at 7:00 PM instead of 8:00 PM.

For those involved in assignments to 9RN (Ninth Region Net) the times will be as follows:

9RN/Early will meet as before at 8:45 PM locally, but that will be 0145z now.

CAN (Central Area Net) will meet as before at 9:30 PM locally, but that will be at 0230z now.

9RN/Late will meet as before at 10:30 PM locally, but that will be at 0330z now.

==========

From: Bernie Holm
Topic: 30 Message: 1078

Since I was unable to download the file on the Ft. Wayne Hamfest posted by WB9QZB (I get a message saying there are errors), I thought others might be having the same problem so I decided to post the following. This is the same info I sent to the Ham magazines.
Bernie, K9JDF

Fort Wayne Hamfest & Computer Expo and
Indiana State A.R.R.L. Convention
November 17 - 18, 2007, Fort Wayne, Indiana

The 35th Annual Fort Wayne Hamfest & Computer Expo, and Indiana State A.R.R.L. Convention, sponsored by the Allen County Amateur Radio Technical Society (AC-ARTS), will be held at the Allen County War Memorial Coliseum at the corner of Indiana 930 (Coliseum Blvd) and Parnell Ave. Open to the public 9:00 A.M. - 4:00 P.M. EST on Saturday and 9:00 A.M. - 3:00 P.M. EST on Sunday. Vendor setup is Friday evening and Saturday morning. Admission is only $6.00 for both days or $4.00 for just Sunday at the door only; Children 11 and under are free when accompanied by an adult. Parking is $4.00. There are 892 commercial and flea market tables (133,000 sq. ft.), all under one roof, containing both new and used radio, computer, and general electronics items. Advance table reservations are required - there will be no table sales at the door. Vendors include several International ham equipment manufacturers. Activities will include many forums and meetings, and VE testing on Saturday. Talk-in on 146.88(-). For more information leave a message on the answering machine at (260) 579-2196 and you will be contacted. You can also send an inquiry to AC-ARTS / Fort Wayne Hamfest, P.O. Box 10342, Fort Wayne, Indiana 46851-0342, or visit our World Wide Web site at http://www.fortwaynehamfest.com.IndyHamRadio@yahoogroups.com

Bernie -

Thanks for posting the text announcement about the fest.

By the way, I downloaded the hamfest annoucement in .pdf format from the Indy Ham Group and it loaded & printed just fine.

73, Mark, WB9QZB

1080. D-STAR Forum at Ft. Wayne Hamfest, Saturday, 11/17 @ 1 pm

Yahoo group: IndyHamRadio
Date: 2007-11-07 09:13:19 UTC
From: Mark Thompson
Topic: 1080 Message: 1080
Attachments: 2 described; binary payloads are missing from this source WARC

There will be a D-STAR forum at the Fort Wayne hamfest on Saturday, 11/17 at 1 pm.

I will present an Overview / Introduction of D-STAR and afterward there will be a discussion of D-STAR activity in Indiana by Indiana D-STAR users.

Last year we had a standing room only crowd of over 75 in attendance at the D-STAR forum.

In addition, dealer KJI Electronics will again be at the hamfest. Last year they had all the models of D-STAR radios & repeaters available for sale.

More information about the forums at the hamfest is at:
http://www.fortwaynehamfest.com/forums.htm

General information about the hamfest & the hamfest flyer is at:
http://www.fortwaynehamfest.com/images/Main%20Hamfest%20Flyer%2007.pdf

The D-STAR simplex frequency at the hamfest will be 145.67 MHz.

I look forward to seeing you there.

73, Mark, WB9QZB
Chicago, IL

More information about ALL the ham digital modes is available at:
http://groups.yahoo.com/group/illinoisdigitalham/

From: Mark Thompson
Topic: 1081 Message: 1081

----- Forwarded Message ----

From Dennis, K7BV:

Friends,

By now, many of you may have heard that Vertex Standard Co., Ltd, (Vertex Standard USA's parent company) announced that they have agreed to form a collaborative joint venture with Motorola, Inc. I personally believe the most important words in this sentence are "collaborative joint venture“ a business relationship that indicates a far different outcome intent than the demise of one of the venture partners.

Since Yaesu is the Amateur Radio Division of Vertex Standard, I am sure you are just as curious as me, a Yaesu employee with a job at stake, to know what this business transaction will mean to all of us in the hobby. Predictably, I see that the news about the pending new Motorola relationship with Vertex Standard, hence Yaesu, is giving life to all sorts of misinformation and "doomsday". Internet postings by the usual cast of characters who always seem to know so much more about things than the rest of us mere mortals. After studying public announcements and considering the internal information that is made available to me in my role as the leadership individual for North American sales at Yaesu, I would like to offer the following FACTS about this exciting development.
Motorola, Inc. (NYSE: MOT) will launch a tender offer to acquire a controlling interest in Vertex Standard Co., Ltd. (JASDAQ: 6821). Upon successful completion of the tender offer and subsequent restructuring process, Motorola will own 80% of Vertex Standard and Toko Giken, a privately held Japanese company, controlled by Jun Hasegawa, current president and CEO of Vertex Standard, will retain 20%, forming a joint venture. On 5 November 2007, the Board of Directors of Vertex Standard expressed their support of the tender offer. Yaesu, of course, as one of the Vertex Standard operations, will be included in this exciting development.

I want our Yaesu customers and concerned others to know the following about the proposed merger:

Vertex Standard (meaning Yaesu to us in the Amateur Radio hobby) will remain a separate, global organization with distinct resources governed by the Board of Directors comprised of four Motorola representatives and one Toko Giken representative. Toko Giken is a privately held Japanese company, controlled by the founderâ€™s family. It currently holds 29.2% shares of Vertex Standard.

Mr. Jun Hasegawa (my boss), son of Sato Hasegawa JA1MP, the founder of Yaesu will continue to take part in the management of Vertex Standard in his capacity as the Representative Director, President and CEO of Vertex Standard after the Tender Offer. The day-to-day management of the joint venture will be the responsibility of Mr. Hasegawa and his senior leadership team, who are also expected to continue. Count me as one of those who will continue with Yaesu.
Our business will continue to be operated as is, and we will continue to actively develop new products and operate the business as a leading manufacturer of amateur radio, marine,

land mobile, and airband radios.

The Vertex Standard brand of equipment (Standard brand in Japan) will continue to exist. The current Vertex Standard brand strategies are highly respected by Motorola and will be continued. Since Motorola appreciates our Yaesu brand strategy, there will be no change to it.
There will NOT be a Motorola brand of Amateur Radio equipment replacing or competing with Yaesu.

Yaesu customers can expect to see positive benefit from the fact that:
Vertex Standard has an experienced engineering team that, combined with Motorola's extensive engineering talent, will develop new innovative products. Personally, I cannot wait to see what this joint engineering effort will bring to Amateur Radio!

Cost synergies will be realized through the use of Motorola's buying power to reduce the joint venture's costs for raw materials. Hams are known to enjoy seeking out the best buy for their hard earned money - expect to see Yaesu products remain highly competitive and providing excellent value for your investment.

Because Mr. Hasegawa will continue to manage the day-to-day operations of Vertex Standard, we do not expect to see changes in the existing Yaesu dealership, pricing and rebate philosophies as a result of the joint venture.

These are historic exciting times for Yaesu, our customers, and Amateur Radio. The future is bright and the potential for incredible technological advancements for Amateur Radio are immense. We are glad you will be there with us as the positive affects of the Vertex Standard / Motorola joint venture unfolds.

1083. Fwd: UNFOUNDED RUMORS: Region 2 IARU Band Plan & AM Operation

Yahoo group: IndyHamRadio
Date: 2007-11-08 04:16:47 UTC
From: Mark Thompson
Topic: 1083 Message: 1083

-----Original Message-----
From: ARRL CL Division <memberlist@...>
Sent: Wed, 7 Nov 2007 9:11 pm
Subject: UNFOUNDED RUMORS: Region 2 IARU Band Plan & AM Operation

7 NOV 2007 - 2050 CST

Fellow Central Division ARRL Members:

For those who follow FCC proceedings and already understand what the IARU is and how it operates, a lot of what I'm about to say may be old news to you. However, we still appear to have individuals, who do not understand the IARU (and sometimes even the FCC), get very excited when somebody tells them their cherished mode of amateur radio operation is in danger of being eliminated. What follows is for the benefit of these people.

The recently approved IARU Region 2 Band Plan is only an advisory band plan for use, as desired, primarily by those amateur radio societies in Region 2 that have little in the way of a band plan. This is the second IARU Region to adopt a new or revised band plan. Region 3 still has yet to act on this item.

The International Amateur Radio Union (IARU) is only an advisory organization made up of the amateur radio societies in each respective region. Region 2 is North and South America. The geographic regions mirror the International Telecommunications Union (ITU) Regions. The ITU is the body that develops the rules at World Radio Conferences that then have to be adopted by each country. The IARU has no such power.

The current mini-uproar is the result of a very few ignorant people with issues making postings to various un-moderated Internet email reflectors.

There is no plot to shut down amateur radio AM operation in the U.S. or it's territories. The existing AM footnotes to our current band plan still apply and will continue to do so until the FCC changes or erases them from its Part 97 Regulations. I repeat, there is no ARRL plan to get rid of HF amateur radio AM operation in the U.S. I also point out that the AM footnotes (that enable AM operation) in the current FCC Amateur Radio Service band plan would have still applied to our regulation by bandwidth proposal, if it had become an FCC Regulation. Only the portions of the HF band plan that would have been changed were listed in the ARRL petition to the FCC. This is standard procedure in an FCC filing. Many people still do not "get it".

I find it absolutely amazing that many people jump to conclusions before they do their own homework. This is true in many activities, including amateur radio. There have been, and apparently always will be, individuals who are gullible, biased, have an axe to grind, or are some combination of the three when it comes to discussing and considering amateur radio regulations. They are few in number, but there are a lot of others who are taken in by these people simply because they don't understand the situation and don't want to spend the effort to get the facts directly from the source.

I don't have a good answer to this situation other than to keep working to spread the truth. I apologize for my exasperation that shows through in this message.

Norm Fusaro, W3IZ, Editor

IN THIS ISSUE:
+ Grow Your Club
+ Instructor Resources
+ Four Is
+ ARRL Awards Program For Clubs
+ Affiliation Milestones

Grow Your Club With New Hams
By Norm Fusaro, W3IZ

One of the most frequently asked questions that we hear from ARRL affiliated clubs is "How can we increase membership in our club?" On the surface the solution is a simple one - make more hams. A foundation of active Amateur Radio operators is required in order to maintain a healthy Amateur Radio club. If you lack a sufficient pool of licensed hams in your area then create some. Clubs that conduct licensing classes where they make recruitment part of the lesson continually increase membership. It does not matter if the course is an eight week program or a weekend crash course, a good instructor will pepper the syllabus with the advantages of membership in the local club and the Radio Amateur's national association -- ARRL.

Providing a license course for those people in the community who are interested in learning about Amateur Radio demonstrates the club's commitment to helping people. Reinforcing Amateur Radio's tradition of helping each other let's the new hams know that they are not just getting a license to operate a radio but that they are also earning a ticket to become part of a worldwide society whose existence is built on mutual contact. Whether on the air or in the community Amateur Radio has always been a two-way function.

From the moment the license class begins new hams need to know that your club is there to help them as they begin their Amateur Radio journey. This relationship begins not in the classroom but at the

time of registration or when that first contact is made whether in person or on the telephone or through the internet.

As the class progresses the new ham is made aware of the reciprocal bond between hams and while the novice may not believe that he or she has something to offer at the moment, their attendance and a desire to belong is sufficient contribution. As long as the club maintains a friendly environment that encourages participation and supports activities the novice will soon become the Elmer to the next group of new hams and will eventually take on leadership positions in the club. However, a club is destined to fade away if they choose to adopt the attitude "build it and they will come."

Be sure to invite the new licensees to your next club meeting. Using written invitations is a nice touch and sends a message that you really want them to attend. The focus of this meeting should be on your new hams and getting them into the mainstream. Several clubs have organized the meeting following a license class using the "Ham Radio 101" format where the entire evening's programming is to show the novices the basics of operating. Have refreshments on hand and be ready to talk about the fun activities such as Field Day or a community activity that your club is involved in. This is not the meeting where want to discuss politics or topics that will embattle the membership. Keep it light and focused on the needs of the newcomers.

New hams are thirsty for information no matter how basic. When and where are the club meetings held? How do I get on the air? What does this or that term mean? Be prepared to answer the simplest questions and provide details when you do. The Mt. Baker club in Bellingham Washington has developed a great handout for new hams that helps answer some of these questions. With Mt. Baker's permission ARRL has made this booklet available to download and customize for your use. The modified version provides a place for your club to insert club and local information.
< http://www.arrl.org/news/features/2005/03/06/1/MBARC-Info-Pack.pdf >
Use this brochure or develop one of your own but in any case be sure to give your new hams something informative to take home with them.

A closing thought when working with new hams, one person's favorite activity is not all that ham radio has to offer. Meeting programs and mentor sessions should stimulate new hams to explore the many options offered to the licensed radio amateur. Organizing and teaching an Amateur Radio license class where the students are encouraged to be a part of the fabric of ham radio and invited to participate in club activities is guaranteed to increase your club's membership with active hams.

ARRL has resources for instructors.

The Instructor's Manual < http://www.arrl.org/catalog/?item=9817 >
includes lesson plans for teaching a Technician license course and a
CD ROM with visual aids for the classroom.

Instructors can advertise their classes on the ARRL website so that
interested people can locate a class in their area. Visit the
instructor support page for more information.
< http://www.arrl.org/FandES/ead/instructor/ >

To become a registered instructor please contact ARRL Educational
Assistant, Rose-Anne Lawrence, KB1DMW at rlawrence@... or
860-594-0263

The Four Is
- Invite
- Inform
- Inspire
- Involve

Invite

- Invite everyone, the new hams and those who have not yet
received their CSCE, to attend the next club meeting where the
program will be based on things that the new ham will need to know.
- Invitations should be in the form of hard copy with day, date
and time. Hand an invitation to each student personally at the end of
the class or mail the invitations to everyone that attended the
class. A big shout out to come to the next meeting lacks sincerity.

Inform

- Provide a packet of information that has contact information
for people who can help the new ham get on the air.
- It's also a good idea to provide club information as well as
some operating aids like a list of local repeaters and how to access
them.

Inspire

- Congratulate your new hams and remind them that they have
just completed the first step toward a life long journey of learning
and fun.
- Encourage those who were not successful this time around to
keep trying because the reward is worth the effort.

Involve

- Welcome new members to your club and to the world of Amateur
radio.
- Encourage the new hams to participate in club functions and

on the air activities. Make sure that they know they are welcome to join the next on the air net, fox hunt or other club activity.

ARRL Awards Program For Clubs

Looking for an exciting way to challenge your club? Try earning DXCC, Worked All States (WAS) or VUCC award for your club. ARRL affiliated clubs are eligible to participate in all of the ARRL awards programs.
If your club does not have a station then use the club call from a member's station. Operate portable ala Field Day and activate a rare grid square. Use your imagination to come up with ideas to activate your club call and involve your members in chasing some very nice operating awards.
Complete information on the ARRL awards program is available on the web at:
http://www.arrl.org/awards/

For information on obtaining a club callsign:
http://www.arrl.org/arrlvec/605ins.html#club

Clubs can use Logbook of The World.

1089. WRC-07 Wraps Up in Geneva; Will Likely Meet Again in 2011

Yahoo group: IndyHamRadio
Date: 2007-11-17 10:15:16 UTC
From: Mark Thompson
Topic: 1089 Message: 1089

WRC-07 Wraps Up in Geneva; Will Likely Meet Again in 2011
The final working session of the 2007 World Radiocommunication Conference (WRC-07) in Geneva drew to a close Thursday afternoon, November 15. The signing ceremony for the Final Acts will take place Friday. According to International Amateur Radio Union (IARU) Secretary David Sumner, K1ZZ, the principal achievements and disappointments, as they relate to the Amateur Services, of the conference are:

Achievements
• Maintenance all existing amateur allocations, including the 7.200-7.300 MHz allocation in ITU Region 2 (the Americas) that had been somewhat at risk in connection with consideration of additional allocations for HF broadcasting (see below).
• A new worldwide secondary allocation at 135.7-137.8 kHz with a maximum radiated power limit of 1 W e.i.r.p. (given the low efficiency of practical antennas for this frequency range, this limit is not as severe as it may sound).
• Inclusion of an item, "to consider an allocation of about 15 kHz in parts of the band 415-526.5 kHz to the Amateur Service on a secondary basis, taking into account the need to protect existing services" on the provisional agenda for WRC-11 (set for 2011).
• Avoidance of future agenda items that pose serious threats to key amateur allocations.
• Some improvement in the so-called "country footnotes" that provide for different allocations by country in all or part of the 1.8, 3.5, 50 and 430 MHz amateur bands.

Disappointments
• No new allocation for the Amateur Service in the vicinity of 5 MHz, and no agenda item to consider such an allocation at a future conference.
• No future agenda item to consider an amateur allocation at 50 MHz in ITU Region 1 (Europe, the former Soviet Union, Mongolia, Africa and parts of the Middle East).

"No Change" for Amateur Allocations, HF Broadcasting
The amateur issues were of course a minor part of the WRC-07 agenda, but the Amateur Service was involved in one of the most contentious agenda items dealing with allocations between 4 and 10 MHz. A series of European Common Proposals had proposed changes to allow for an increase of 350 kHz in HF broadcasting allocations, with a footnote for administrations to allow the Amateur Service to use 5.260-5.410 MHz on a secondary basis and with a radiated power limit of 250 W; however, HF broadcasting had no support from the other regional organizations and no compromise acceptable to all parties could be found. Ultimately the European administrations had to accept "no change" for broadcasting, effectively scuttling our chances for a 5 MHz allocation.

Next WRC Tentatively Set for 2011
The IARU had hoped that if an allocation could not be achieved at WRC-07, an appropriate agenda item could be included for WRC-11. The 2007 conference, however, had little interest in taking up HF issues at the next conference, tentatively set for 2011, having little to show for a great deal of effort expended on HF in preparing for WRC-07. The only HF issues on the provisional WRC-11 agenda have to do with oceanographic radar applications and the implementation of new digital technologies for the maritime mobile service.
The International Telecommunication Union's planning for the next World Radiocommunication

Conference begins on Monday in Geneva, with the convening of a two-day Conference Preparatory Meeting for WRC-11. Paul Rinaldo, W4RI, will attend on behalf of the IARU.

1091. MFJ Factory Tour Video

Yahoo group: IndyHamRadio
Date: 2007-11-21 22:12:53 UTC
From: Mark Thompson
Topic: 1091 Message: 1091

AmateurLogic.TV Episode 17 is now available for download.

]

Every wonder how ham equipment is built.

Join us this month for a factory tour of MFJ Enterprises with Richard Stubbs. Very interesting… You don’t want to miss it!

Peter unvails his Amateur Television station and demonstrates ATV in Melbourne.

And Tommy shows us a new web site that makes finding repeaters a breeze. Google maps display the locations for easy viewing.

It’s 57:43 of Ham radio fun just in time for Thanksgiving.

1092. JCARTS Wed net @ 7:30

Yahoo group: IndyHamRadio
Date: 2007-11-22 00:08:36 UTC
From: Shawn Tovey
Topic: 1092 Message: 1092

Good evening all Hams!

The Jackson County Amateur Radio Technical Society would like to invite everyone to check in to the Wednesday night net at 7:30. We are located on 145.430- PL103.5. This is the N9KPA repeater and is a completely OPEN repeater to all!

I hope to hear from you all soon.

Be well and 73,

KC9LII

1093. To all VEs...

Yahoo group: IndyHamRadio
Date: 2007-11-22 13:36:45 UTC
From: Brad Knapp
Topic: 1093 Message: 1093

I think you guys are selfless, and great. Just upgraded last night at a session in Anderson (should have done that years ago.....I guess I'm not exactly on the fast track!), and the team up there has monthly sessions, no matter how many or few show up.

Lots of people put in lots of hours of free time to keep the hobby alive, and I think the VEs do a great job of making testing convenient and accessible for everyone.

Happy Thanksgiving.

1101. ARRL RTTY/Digital Mode Round-Up, January 5 - 6 (Includes Baudot RTTY, ASCII, AMTOR, PSK31 & Packet)

Yahoo group: IndyHamRadio
Date: 2007-12-04 18:15:44 UTC
From: Mark Thompson
Topic: 1101 Message: 1101

2008 ARRL RTTY Round-Up Rules
General Rules
Object: Amateurs worldwide contact and exchange QSO information with other amateurs using digital modes (Baudot RTTY, ASCII, AMTOR, PSK31, and Packet—attended operation only) on 80, 40, 20, 15, and 10 meter bands. Any station may work any other station.
Date and Contest Period: First full weekend of January, but never on January 1. Begins 1800 UTC Saturday, ends 2400 UTC Sunday (January 5-6, 2008).
2.1. Operate no more than 24 hours.
2.2. The six hours of off time must be taken in no more than two blocks.
Entry Categories:
3.1. Single Operator:
3.1.1. Low Power.
3.1.2. High Power.
3.2. Multioperator, Single Transmitter:
3.2.1 Power.
3.2.1.1. Low Power
3.2.1.2. High Power
3.2.2. Stations are allowed only one transmitted signal at any given time.
3.2.3. Includes those single operators that use any form of spotting assistance such as from nets or packet.
3.2.4. Includes those that receive assistance with logging or relief operators, etc.
3.2.5. Limited to 6 band changes (maximum) in any clock hour.
3.2.6. The clock hour is from zero through 59 minutes.
3.2.7. Band changes are defined so that, for example, a change from 20 meters 15 meters and then back to 20 meters constitutes two band changes.
Exchange:
4.1. United States: Signal report and State.
4.2. Canada: Signal report and Province.
4.3. DX: Signal report and consecutive serial number, starting with 001.
Scoring:
5.1. QSO Points: Count one point for each completed QSO.
5.2. Multipliers: Each US state (except KH6 and KL7) plus the District of Columbia (DC), Canadian provinces/territories: NB (VE1, 9), NS (VE1), QC (VE2), ON (VE3), MB (VE4), SK (VE5), AB (VE6), BC (VE7), NWT (VE8), NF (VO1), LB (VO2), NU (VYØ), YT (VY1), PEI (VY2) and each DXCC country. KH6 and KL7 count only as separate DXCC entities.
5.2.1. Count only once (not once per band).
5.2.2. The US and Canada do not count as DXCC entities.
Reporting:
6.1. All entries are must be postmarked or emailed by February 5, 2008.
6.2. Entries in electronic format may be submitted to RTTYRU@... or submitted on 3.5” diskette to RTTY Round-Up, ARRL, 225 Main St, Newington, CT 06111.
6.3. All logs that are created electronically are required to submit their electronic log file in Cabrillo file format. A print out of an electronically generated log is not an acceptable substitute. A hand-written log that is later entered into a logging or other

electronic program is considered an electronically generated log and must meet electronic file requirements.
6.4. The Cabrillo entries include the header and the complete QSO list.
6.5. Submissions may be made using the web applet at www.b4h.net/cabforms
6.6. Hand-logged entries may be submitted to RTTY Round-Up, ARRL, 225 Main St, Newington, CT 06111.
Miscellaneous:
7.1. Packet radio contacts made through digipeaters or gateways are not permitted.
7.2. All ARRL Contest rules and forms may be downloaded from the ARRL Contest web page at: http://www.arrl.org/contests/forms or obtained from the Contest Branch by sending an SASE with 2 units of postage.
7.3. For contest information contact contests@... or (860) 594-0232
Awards:
8.1 Certificates will be awarded to:
8.1.1. Top high power and low power Single Operator and Multioperator scorers in each ARRL/RAC Section.
8.1.2. Top high power and low power Single Operator and Multioperator scorers in each DXCC country (other than W/VE).
8.2. Plaques, if sponsored, will be awarded to the top scoring low and high power entrant in each category overall, each ARRL Division, and Canada.
8.2.1. Unsponsored plaques may be purchased from the ARRL.
Other: See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands below 30 MHz (HF)” November 2001 QST.
Recommended HF Digital Operating Frequencies (MHz)
North and South America Europe/Africa
3.590 RTTY DX 3.580-3.620
See Note
7.040 RTTY DX 7.035-7.045
7.080-7.100
14.070-14.099.5 14.080-14.099
21.070-21.100 21.080-21.120
28.050-28.150

NOTE: With the recent realignment of frequency allocations on the 80-meter band, we offer no specific recommendations at this time. We remind stations that RTTY and digital modes are restricted to frequencies below 3.600 MHz in the US effective December 15, 2006. We also encourage participants to be mindful of other stations and activates on the 80-meter band.
Recommended Novice Digital Operating Frequencies (MHz)
10 meters 28.100-28.150*
Suggested simplex packet-radio frequencies
28.102.3
28.104.3
*Authorized power output 200-watts maximum for Novices / Tech Plus only in the 10-meter Novice sub-band.

Be a better pen pal.

1103. Announcing New Chicago Area Amateur Radio Yahoo Group

Yahoo group: IndyHamRadio
Date: 2007-12-05 14:23:11 UTC
From: Mark Thompson
Topic: 1103 Message: 1103

Chicago Amateur Radio Group

http://groups.yahoo.com/group/ChicagoAmateurRadio/join/

The Chicago Amateur Radio Yahoo Group is dedicated to promoting closer communication and sharing of amateur radio knowledge & technique among fellow amateur radio enthusiasts.

The goals of the Chicago Amateur Radio Group are:

To provide an efficient means of disseminating amateur radio news, announcements, and event information;

To promote the activites, newsletters, events, and meetings of ALL participating radio clubs;

To encourage better communication and coordination among local radio clubs;

To foster positive discussions of news and topics relating to amateur radio, including but not limited to, DXing, contesting, digital modes & technology, homebrewing, antennas, portable operation, satellite communication, fox hunting, and other Amateur Radio topics;

To share information about amateur radio related electronic issues, problems, troubleshooting tips, work-arounds, and fixes among its members, and;

To provide a forum fostering improved operating techniques.

Membership is free and open to all licensed Amateurs. Postings by other Amateur Radio Clubs announcing meetings, activities or other events are encouraged.

From: Shawn Tovey
Topic: 1104 Message: 1104

Is anyone familiar with HAM operations on a professional Vertex VX-4000U? I bought one new because the price was amazing and I could not pass it up. I have all of the programming capabilities as well. I guess I am just wondering what all I can do with it.

Be well and 73,
Shawn KC9LII

1105. Misleading and Incorrect Rumors Surround IARU Region 2 Band Plan

Yahoo group: IndyHamRadio
Date: 2007-12-07 22:53:41 UTC
From: Mark Thompson
Topic: 1105 Message: 1105

Misleading and Incorrect Rumors Surround IARU Region 2 Band Plan

Misleading and incorrect rumors are surrounding the recently revised band plan of IARU Region 2, adopted at its triennial conference in Brazil in September. The following statement was authorized by ARRL President Joel Harrison, W5ZN.

During the conference, held September 10-14 in Brasilia, representatives from IARU Region 2 societies met in committees prior to a final plenary session and adopted recommendations concerning a number of items important to Amateur Radio in the region. These included plans to improve emergency communication, enhance education and reduce interference to national emergency nets, as well as revising the Region 2 HF band plan.

The revised Region 2 band plan for 160-10 meters takes effect January 1, 2008. The band plan is based on the band plan adopted by IARU Region 1 at its conference in Davos, Switzerland in September 2005.

IARU regional band plans have been in existence for many years. They are developed, reviewed and approved at regional conferences of the IARU Member-Societies. The band plans provide voluntary guidelines and recommendations for good operating practice that are intended to assist amateurs in making the most effective use of our limited frequency allocations. They are not restrictions and carry no regulatory authority.

Unlike the US, where the FCC's Part 97 rules regulate the frequencies allocated to the Amateur Radio Service by emission designator, many countries do not have government-regulated sub-bands within their amateur allocation. Because of this, the national Amateur Radio societies in these countries look to a band plan to provide guidance for the location of operating preferences. In such cases, these countries are urged to promote incorporation or recognition of a band plan into their regulations. In the United States, however, ARRL's band plans will continue to provide guidance for recommended operating preferences including the 160 meter band plan that was revised in 2001 on the basis of membership input.

One virtue of voluntary band plans is that they are more flexible and can be amended more easily than the FCC rules; writing them into the rules would be counterproductive. As voluntary guidelines, the band plan cannot by definition be "more severe" than regulations; however, if the band plan did not suggest an operating pattern that is a subset of the regulations, it would serve no purpose.

There is also a mistaken assumption that the new IARU Region 2 band plan is an ARRL initiative seeking regulation by bandwidth. It is not, nor is it in any way a vehicle to achieve regulation by bandwidth.

It happens that the ARRL's "regulation by bandwidth" petition, the now-withdrawn RM-11306, also drew on the Region 1 band plan. This is acknowledged on page 10 of the petition. The similarities between RM-11306 and the Region 2 band plan are the result of having some common roots, but the two are not otherwise related.

While a number of Amateur Radio organizations and publishers support and agree with the ARRL on the concept of regulation by bandwidth as an essential element to the orderly introduction of new digital modes into the HF bands, ARRL will not be pursuing a rulemaking until some degree of consensus can be achieved in the amateur community.

ARRL has conducted an open process of soliciting input regarding matters of importance to the Amateur Radio Service. That will continue prior to the submission of any proposals for

future regulatory changes to improve the Amateur Radio Service.
As one of the 39 Member-Societies of IARU Region 2, the ARRL will, as always, continue to openly work to improve the Region 2 band planning process prior to the next conference and give its members ample opportunity to offer comments and suggestions. Members may provide input to their elected representative (identified on page 15 of QST), or to our Ad-hoc Band Plan Committee and e-mail address that was established in 2006 at bandplan@....

Subject: [illinoisdigitalham] SWO Digital and Technical Symposium

The 22nd annual Southwest Ohio Digital and Technical Symposium will be held from 8 AM to approximately 4:30 PM EST, Saturday, January 12, 2008 in Thesken Hall, on the Middletown Campus of Miami University, Middletown, Ohio.

Symposium planners have issued a "call for papers" and presenters. If you have a particular related subject of interest which you'd like to present, or know of someone who is qualified to present, please contact Jay Slough, K4ZLE <K4ZLE@...>.

If you have not attended previously, here's some additional information. This symposium is unusual in that there are no attendance fees, there is no flea market and there is no commercial sponsorship. It is not a way to raise money; rather, it is a way to raise the knowledge level of ham radio-related technology. In addition to the formal presentations, informal sharing of information is encouraged through a demonstration room and one-on-one conversations and small group discussions.

Mark your calendar now and plan to attend the 22nd Annual Southwest Ohio Digital and Technical Symposium on Saturday, January 12, 2008. Check http://www.swohdigi.org/ for future updates on the agenda.

WINTER STORM WARNING IN EFFECT FROM 7 AM SAT TO 1 PM EST
SUNDAY.

THE NATL WEATHER SVC IN INPOLIS HAS ISSUED A WINTER
STORM WARNING.WHICH IS IN EFFECT FROM 7 AM SAT TO 1 PM EST
SUNDAY. THE WINTER STORM WATCH IS NO LONGER IN EFFECT.

SNOW WILL BEGIN ON SAT MORNING. BY SATURDAY
AFTERNOON.SNOW WILL MIX WITH FREEZING RAIN & SLEET UNTIL
SATURDAY NIGHT. LATE SAT NIGHT THE PRECIPITATION WILL AGAIN
CHANGE OVER TO ALL SNOW & CONTINUE INTO SUN MORNING.

ICE ACCUMULATION OF AROUND ONE QUARTER OF AN INCH IS
POSSIBLE ON SAT AFTERNOON & EVENING. TOTAL SNOW
ACCUMULATIONS OF 4 TO 8 INCHES ARE EXPECTED BY SUN MORNING.

WIND WILL ALSO BE A CONCERN. BY SAT AFTERNOON WIND WILL GUST
FROM THE NE UP TO 30 MPH. ON SUNDAY.WIND WILL INCREASE TO
SUSTAINED 20 MPH WITH GUSTS UP TO 40 MPH. THE WIND WILL BE FROM
THE NO. WHICH WILL IMPACT ALL EAST & WEST ORIENTED ROADWAYS.
SIGNIFICANT BLOWING & DRIFTING SNOW IS EXPECTED BY SUNDAY
MORNING. THIS WILL MAKE TRAVEL VERY HAZARDOUS OR IMPOSSIBLE.

THERE IS STILL SOME UNCERTAINTY WITH REGARD TO SNOWFALL AMOUNTS.
CHECK BACK FOR FURTHER UPDATES.

1109. Is the next sunspot cycle starting ?

Yahoo group: IndyHamRadio
Date: 2007-12-17 09:04:04 UTC
From: N9WB
Topic: 1109 Message: 1109

There is no question that HF conditions have been very poor for the last couple of years. Sunspots run in approximately a 11 year cycle. Within this cycle there is a 28 day cycle that has smaller high and low variations.

The good news is that the minimum may be coming to an end and that the next cycle may be beginning. It is expected to be very intense and peal in 2012. this does NOT mean that you will have to wait until 2012. As the sunspot cycle turns upward, conditions quickly improve. Now is the time to plan for this change, the conditions should be very much better in two years. Conditions will first improve on the lower HF bands but openings will appear more and more on all frequencies below 100 MHz. As we near the peak, daily communications world wide can be had even on six and ten meters due to F2 layer skip.

Vy 73, Walt N9WB.

.....
.....
Here is a link to an interesting article from the FT-200 group.

The solar physics community is abuzz this week. No, there haven't been
any great eruptions or solar storms. The source of the excitement is a
modest knot of magnetism that popped up on the sun, possibly heralding
the start of a new solar cycle.

1111. Midstates Amateur Radio Club Project

Yahoo group: IndyHamRadio
Date: 2007-12-21 15:41:53 UTC
From: Brian Murrey
Topic: 1111 Message: 1111

Marc Snell KC9CCM and I will be discussing information about a kit building event we'd like to do after the MARC meeting in February.

What we're thinking about is building a Multimeter kit, it's an Entry Level kit so if you have never soldered before, or if you're an expert builder, you can still have some great fun. At the January meeting we'll get a show of hands as to who wants to participate. If we have a half dozen or so, I'll start getting the kit info together so you can get your kits ordered. You need to be a member.

Cost of this first project will run you less than $30 including a soldering pencil and some solder. If this goes well, I have some other projects planned. I can help you build your own test equipment, and then a working transceiver that you can try out on Field Day in June.

There is nothing as exciting (almost nothing) as using a rig you built with your own hands...that first QSO is something you'll remember for a long time.

In Feb we'd like to build a Multi Meter, no ham bench should be without at least one.

In Mar we'd like to build an RF Probe that you can use with the meter to measure RF output power.

In Apr we'd like to build a 20w Dummy Load with RF indicator

In May we'd like to start the transceiver kit, using the tools you made above, you will be able to test your rig building process and KNOW it is going to work on the first try. For the fired up builders, I will also show you an antenna tuner kit for HF that you can build for less than $40.

When we get done with this process, you will have learned how to solder, how to identify components, wind inductors on toroid forms, and a whole lot about simple test equipment and radio gear.

Also, I have free copies of the K7QO CW Course on CD ROM...let me know if you want one and I will bring it to the club meeting in January. All I ask is you give me a blank CD ROM in exchange. You can go from zero to 5 wpm in about two weeks with 20 mins a day in practice.

Stay with it and you can be at 10 wpm in another week, and before you know it...you'll be QSOing on homebrew gear at 15 wpm or faster. Now that CW is not required, it's a lot easier to learn.

If you have any questions, just send email

73 de KB9BVN

Merry Christmas!!

Brian,
Let's go with the multimeter project. I'll use a picture of one of mine and put something on the club web page as an advancer. If you have a picture or a web page where I can get the actual meter I'll use that instead.

We can also discuss getting extra help for the scouts lock-in in February.
Have a Merry Christmas and may Santa not be in the QRP mode when he fills your stocking.
73,
Jack

1113. Ham Radio Classes

Yahoo group: IndyHamRadio
Date: 2007-12-23 15:15:20 UTC
From: Robert Griggs
Topic: 1113 Message: 1113

All:

I have talked to some local hams and a few non-hams, there are some that would like to have some Amateur Radio Classes for ALL license classes. I was wanting to know if anyone in the Henry County area would be willing to teach some new ham classes and upgrade classes. I also have a request from a boy scout troop here in Henry county for the Radio Merit Badge as well. So I am looking for some teachers or Elmer's that would be willing to teach some classes in Henry County.

From: Mark Thompson
Topic: 1116 Message: 1116

Satscape TV

Satscape is one of the most popular programs for tracking Amateur Radio Satellites. Now Scott Hather G7LIU has added Satscape TV to his website.

On the website Scott says:

Satscape TV is a 24 hour TV Channel that broadcasts Videos all about Satscape, Space exploration, NASA, ESA, Amateur Radio and Amateur Satellite Radio tutorials and 'how-tos', and anything else I can think of that I think you'll want to watch.

We will also have special days where we'll put the serious stuff to one side and have a "comedy day", or some other theme, so what do you need to watch Satscape TV?

You probably already have everything, just a web browser and Flash installed, it works on Windows, Linux and Mac (much like Satscape for Java!).

Episode 16: MFJ Enterprises Interview

October 12th, 2007

AmateurLogic.TV Episode 16 is now available for download.
http://www.amateurlogic.com/downloads.htm

It’s another fun packed episode.
George has a very interesting interview with Martin F. Jue, President and founder of MFJ Enterprises http://www.mfjenterprises.com/.

Peter demonstrates his WokTenna from the mountain tops downunder.
Tommy talks about the automatic tuning Yaesu ATAS-120 mobile antenna.
Jim has another Network Tools segment featuring the powerful Netstat.

And George demonstrates the Softrock Software Defined Radio using the M0KGK SDR decoder software http://www.m0kgk.co.uk/sdr/index.php.

It’s 55:20 of AmateurLogic you don’t want to miss.

Subject: [frrl] Last chance to work all of the Canadian Provinces for 2007 HF Challenge

In case you did not know, there is a Canadian Day HF contest from 0000
to 2359 UTC on December 29 where you may be able to work the rest of
the Canadian Provinces missing from your HF Challenge worksheet.

The suggested CW freqs on 160, 80, 40, 20, 15, and 10m is xx.025 MHz.

The suggested Phone frequencies are 1850,3775,7075(not our phone
band), 14175,21250,and 28500.

The exchange you give is RST and serial number.

By the way, I am just looking for VE8. I hope the propagation Gods
smile on me...

73, Dick AH6EZ

1120. ARRL RTTY/Digital Mode Round-Up , 1/5 - 1/6

Yahoo group: IndyHamRadio
Date: 2007-12-29 07:22:24 UTC
From: Mark Thompson
Topic: 1120 Message: 1120

ARRL RTTY/Digital Mode Round-Up

Date: January 5-6, 2008

Location: Baudot RTTY, ASCII, AMTOR, PSK31, and Packet—attended operation only on 80, 40, 20, 15, and 10 meter bands

Notes: 2008 ARRL RTTY Round-Up Rules
General Rules

Object: Amateurs worldwide contact and exchange QSO information with other amateurs using digital modes (Baudot RTTY, ASCII, AMTOR, PSK31, and Packet—attended operation only) on 80, 40, 20, 15, and 10 meter bands. Any station may work any other station.

Date and Contest Period: First full weekend of January, but never on January 1. Begins 1800 UTC Saturday, ends 2400 UTC Sunday (January 5-6, 2008).
2.1. Operate no more than 24 hours.
2.2. The six hours of off time must be taken in no more than two blocks.

Entry Categories:
3.1. Single Operator:
3.1.1. Low Power.
3.1.2. High Power.
3.2. Multioperator, Single Transmitter:
3.2.1 Power.
3.2.1.1. Low Power
3.2.1.2. High Power
3.2.2. Stations are allowed only one transmitted signal at any given time.
3.2.3. Includes those single operators that use any form of spotting assistance such as from nets or packet.
3.2.4. Includes those that receive assistance with logging or relief operators, etc.
3.2.5. Limited to 6 band changes (maximum) in any clock hour.
3.2.6. The clock hour is from zero through 59 minutes.
3.2.7. Band changes are defined so that, for example, a change from 20 meters 15 meters and then back to 20 meters constitutes two band changes.

Exchange:
4.1. United States: Signal report and State.
4.2. Canada: Signal report and Province.
4.3. DX: Signal report and consecutive serial number, starting with 001.

Scoring:
5.1. QSO Points: Count one point for each completed QSO.
5.2. Multipliers: Each US state (except KH6 and KL7) plus the District of Columbia (DC), Canadian provinces/territories: NB (VE1, 9), NS (VE1), QC (VE2), ON (VE3), MB (VE4), SK (VE5), AB (VE6), BC (VE7), NWT (VE8), NF (VO1), LB (VO2), NU (VYØ), YT (VY1), PEI (VY2) and each DXCC country. KH6 and KL7 count only as separate DXCC entities.

5.2.1. Count only once (not once per band).
5.2.2. The US and Canada do not count as DXCC entities.

Be a better friend, newshound, and
know-it-all with Yahoo! Mobile. Try it now.

1121. Ham Radio BrowserToolbar and PocketDigi & Mobile Log for Windows Mobile / PocketPC

Yahoo group: IndyHamRadio
Date: 2007-12-30 07:23:39 UTC
From: Mark Thompson
Topic: 1121 Message: 1121

N0HR Software & Resources

N0HR's ham radio website, http://www.n0hr.com has many free resources for ham radio:

1) The Ham Radio Toolbar for Internet Explorer & Firefox:
http://www.n0hr.com/Ham_Radio_Toolbar.htm

HamLinks is a free ham radio toolbar that extends your (Internet Explorer or Firefox) web browser to give ham radio operators quick access to great ham radio content. It's completely free, easy to install (and uninstall) and can be configured by the user. No registrations, spyware, spam or other hooks.

No spyware, security holes, email scams or hijacked searches. See the privacy policy.

Features of the HamLinks ham radio toolbar

Here are a few of the features of the HamLinks ham radio toolbar.

Powerful search box. Simply enter some text in the box or select it in your browser, then use the search menu to quickly search any of the following:

QRZ.com (great for callsign searches from the toolbar)
DXwatch (spot searches from the toolbar)
QSL Manager (lookup dx callsigns from the toolbar)
FindU.com (APRS location information with a call search from the hamlinks toolbar)
Ham Radio Links (search the links directory)
Product reviews (select a ham radio product and instantly find reviews for it!)
Ham Radio Classifieds at eHam and QTH.com (select a product and see if there are any for sale). Of course, you can also find ham radio products at eBay as well further down the menu.
Links to popular ham radio websites.
Access to the DXpedition Map.
Ham Radio Blog Feeds
Customizable email notifier and weather icon
UTC Time
WWV gadget to show propagation bulletins
Podcast player with ham radio related podcasts
Propagation Data from WWV - similar to Propfire

2) PocketDigi for Windows Mobile and PocketPC PDAs:
http://www.n0hr.com/PocketDigi/PocketDigi_intro.htm

What is PocketDigi?

PocketDigi is an open source utility developed by OK1IAK to provide ham radio operators with PocketPC PDAs with the ability to use (encode and decode) digital modes such as RTTY (teletype), PSK (phase shift keying), and CW (Morse Code).
Want to take your PocketPC PDA to go backpack mobile and work PSK31 QRP?
Then, PocketDigi is the app for you! Since the advent of mobile computing, radio amateurs have been exploring creative ways to utilize laptop computers and PDAs for portable ham radio operations and mini-DXpeditions.
PocketDigi was created by Vojtech OK1IAK who built the utility using Microsoft's Embedded Visual C. He used (and improved) portions of a Linux GNU open source application called gMFSK to do encoding and decoding.

3) MobileLog PocketPC PDA Logbook Application:
http://www.n0hr.com/MobileLog/MobileLog_2_Tour.htm

Your PocketPC / Windows Mobile PDA keeps you organized on the go. But have you considered using it to manage your ham radio activities? With MobileLog, you can log your ham radio contacts while on-the-go..

MobileLog 2 offers significant improvements over earlier versions of MobileLog including:

Major performance improvements (speed and size)
Integration with PocketDigi, the PocketPC digitial mode application
WAS reports
Save reports as CSV, Tab delimited or HTML files
Landscape mode
User-defined fields
Easy to update prefixes and DXCC entities
Advanced reports which allow you to create a filtered listing of worked or confirmed QSOs
Logbook view
Compatibility with Windows Mobile 5 and PocketPC 2003 without the need for the Microsoft VBRuntime
Built-in on-line help system
An improved / simplified installation process
Automatically uses GMT
and much more

PocketDigi for Windows Mobile and PocketPC PDAs:
http://www.n0hr.com/PocketDigi/PocketDigi_intro.htm

What is PocketDigi?
PocketDigi is an open source utility developed by OK1IAK to provide ham radio operators with PocketPC PDAs with the ability to use (encode and decode) digital modes such as RTTY (teletype), PSK (phase shift keying), and CW (Morse Code).
Want to take your PocketPC PDA to go backpack mobile and work PSK31 QRP? Then, PocketDigi is the app for you! Since the advent of mobile computing, radio amateurs have been exploring creative ways to utilize laptop computers and PDAs for portable ham radio

operations and mini-DXpeditions.
PocketDigi was created by Vojtech OK1IAK who built the utility using Microsoft's Embedded Visual C. He used (and improved) portions of a Linux GNU open source application called gMFSK to do encoding and decoding.

MobileLog PocketPC PDA Logbook Application:
http://www.n0hr.com/MobileLog/MobileLog_2_Tour.htm

Your PocketPC / Windows Mobile PDA keeps you organized on the go. But have you considered using it to manage your ham radio activities? With MobileLog, you can log your ham radio contacts while on-the-go..
MobileLog 2 offers significant improvements over earlier versions of MobileLog including:
Major performance improvements (speed and size)
Integration with PocketDigi, the PocketPC digitial mode application
WAS reports
Save reports as CSV, Tab delimited or HTML files
Landscape mode
User-defined fields
Easy to update prefixes and DXCC entities
Advanced reports which allow you to create a filtered listing of worked or confirmed QSOs
Logbook view
Compatibility with Windows Mobile 5 and PocketPC 2003 without the need for the Microsoft VBRuntime
Built-in on-line help system
An improved / simplified installation process
Automatically uses GMT
and much more

1123. Macintosh Software

Yahoo group: IndyHamRadio
Date: 2007-12-31 15:51:52 UTC
From: Bernard Holm
Topic: 1123 Message: 1123

I am looking for some good software for Macintosh computers which will allow me to run the digital modes. I have a PPC Mac so if something is written ONLY for the Intel computers , I can't us it. I have been wanting to get on digital but haven't found the software, however
I haven't looked recently.
Thanks
Bernie, K9JDF

Don,

Maybe not!! Last night 80m DX was all over the place. I worked Italy and Slovenia on 80m with my K2 at 5w and using the attic dipole. On 40m I had a 30 min QSO with a ham in San Diego with no QSB, and then I worked KH6ZM in HAWAII on 40m with 5w and the attic dipole. KH6ZM was running the SKCC special event station K2A/KH6 last night....he was BOOMING in and gave me a 559.

I also heard but couldn't work French Polynesia on 40m, Poland on 80m, Yugoslavia on 8om, Crete on 80M, and I have worked IT2KWN in Costa Rica 3 out of the last five nights on 40M with 5w and the attic dipole. I even got three DXCC's with the HW9 on New Years Eve and New Years Day.

W9ILF bagged New Zealand yesterday, MID DAY, on 17m...he's a real DXer.

I HOPE this is a preview of coming attractions!!

What split is the radio? If its a 450 to 470 or so. Most likely yes.
It will go into the 440 to 450 ham band. Higher splits won't go.

The software won't program these options from the start. But try this...

Read the rom from radio first, then when you have the existing setup
on screen,
push F2 twice, which should get you in a window where you can tab over
to adjust
the frequency limits of the RX & TX. change them for the 440 to 450
ham band and then program away. I would not try anything lower RX then
440. Might get into VCO locking problems. So program in your repeaters
and simplex and you will be set. These commercial monobands put your
typical dual band ham radio to shame.

I am authorized by Chuck Adams K7QO to distribute his CW learning course, free of charge. Hundreds and maybe thousands of people have learned the joys of CW with Chuck's course. You can be from zero to 10 WPM in about three weeks if you just follow his directions. Within a month or so you can be QSOing along at about 20 wpm.

If you are interested in having a FREE copy of the K7QO CW Course on CD ROM, just follow the instructions below.

Send a postage paid return mailer, with a single blank CD ROM. I will burn your CD and mail it back to you.

2008 Central Indiana Severe Weather Symposium

2008 brings the next installment of the Central Indiana Severe Weather Symposium, an all day session geared towards providing more advanced information for spotters. The 2008 symposium will be held on Saturday, March 1st, 2008, from 8:00 am to 4:00 pm, at the Valle Vista Conference Center, 755 East Main Street, Greenwood, Indiana, and is cosponsored by the Central Indiana Chapter of the American Meteorological Society and National Weather Service Indianapolis. Symposium planning is still ongoing, so check back at this website for updated information as the symposium date approaches.

Confirmed speakers as of this time include:

Dan McCarthy Meteorologist-in-Charge, NWS Indianapolis
Dave Tucek Warning Coordination Meteorologist, NWS Indianapolis
John Kwiatkowski Science and Operations Officer, NWS Indianapolis
Paul Sirvatka Professor of Meteorology, College of DuPage
Angela Buchman Broadcast Meteorologist, WISH-TV 8
Bill Gosnell Emergency Manager, Delaware County, Indiana
Logan Johnson Meteorologist, NWS Indianapolis
Joseph Nield Meteorologist, NWS Indianapolis

A student poster presentation is also planned for the symposium. Students presenting posters will be able to register at a discounted rate. Student registrations must be accompanied by a copy of your valid student ID.

Please visit http://tinyurl.com/2vga8x for more information and registration forms.

Someone needs to update this "automatic reminder". The HDXCC
meeting is indeed the 2nd Wednesday, but Dookz has closed
and the meeting has moved to:
- - GT South's.
- - 5711 E 71st Street (Near Binford/SR-37)
- - Indianapolis, IN 46220
- - (317) 849-6997

To confirm, see: http://www.hdxcc.org/
GT South's address: http://www.gtsouths.com/aboutframe.htm

Note: not all pages at the HDXCC web site have been
updated, but the _main_ page says the meeting is at
GT South's on E. 71st St, and their emails last month
(Dec 2007) indicated it was now at GT's.

P.S. I am not an official or member of HDXCC, just a busybody.

1145. Re: [IndyHamRadio] Free Offer

Yahoo group: IndyHamRadio
Date: 2008-01-08 12:56:55 UTC
From: Zack Widup
Topic: 1134 Message: 1145

When I learned Morse, back in 1967, it took a couple weeks with a teacher who was a ham doing daily practices of a half hour after classes in school to get to 5 wpm. A few months after I got my Novice, I was up to 10 wpm. By the time my Novice license was about to expire, I could copy 15 wpm and was ready for the General. (People recommended I be able to copy a little faster than the test speed due to the stress of sitting in front of an examiner for a CW test.)

I spent quite a bit of time copying the then-ubiquitous commercial Morse stations (NAA, NSS, WOO, etc.) to get my speed up to 20 wpm. I think I could actually copy 25 wpm on paper under stress-free conditions when I took the Extra at the Chicago FCC office in 1971.

I can copy about 50 wpm now. I can't write or type that fast but I can understand what's being sent and carry on QSO's at that speed.

I once taught Morse in a ham class and had one student who learned to send and receive 5 wpm in two days. But that was a rare occurrence.

I think the length of time it takes you to get to 5, 10, 20 wpm is highly individual and some will learn faster than others. It also depends on how much time you spend at it.

I might send you a blank CD for the course just to see how it works (and probably pass it along to someone else - there are people I know who'd like to learn it).

Chuck Adams code course is very good. It got me going
and I have enjoyed CW ever since. The hard part is
once you start making CW QSO's it is so much fun it is
hard to go back and listen more to the course.

Thanks Brian for distributing the CD! If you have
never tried CW I hope you take Brian up on the offer
and give it a try!

It isn't about the speed, it is fun at any speed and
feels GREAT!

This guy is quite a pro.

Do you have any idea how much he's spent on his lab equipment? Probably
more than I've made in my life.
:-)

1151. Lead solder

Yahoo group: IndyHamRadio
Date: 2008-01-10 12:47:24 UTC
From: boeingdriver757@sbcglobal.net
Topic: 1151 Message: 1151

Well, this is my latest little obsession/crusade.....lead solder. I went to Fry's a few days ago to get some, and noticed that the lead solder supply was dwindling and not being replaced. I asked one of their thousands of employees what the deal was, and he said that the move away from lead solder is getting some real traction. Apparently, the European Union has mandated it (don't know any deatils), which drives manufacturers to use lead-free if they want to do business in europe. Also, California is getting in on the action (love my new "9" callsign after retiring my "6" callsign), and Fry's is based out there, so maybe it's just a Fry's deal here for now.

In any case, maybe think about picking up a pound or two while you still can(?)

Cheers,

Brad Knapp

There's still a lot of it around. Places like Hosfelt Electronics, All Electronics, Alltronics, etc. still sell it. I see it at hamfests all the time.

How long this will continue, I don't know. I tried the ROHS-compliant solder and I just don't like it as well. Hopefully we can all stock up with enough old-fashioned lead solder to last us the rest of our lives. :-)

Zack wrote, "I tried the ROHS-compliant solder and I just don't like it as well".

Yes, the lead-free solder is harder to work with. You have to increase your soldering temperature 35-40 deg C. Also, if you are working with a densely populated board, there is a long-term effect known as "tin whiskering" where the solder grows "whiskers" which can bridge the small gaps between PCB traces and cause shorts.

From: Mark Thompson
Topic: 1154 Message: 1154

http://www.swohdigi.org/

Twenty Second Annual Southwest Ohio
Digital Symposium
Saturday 12 January 2008
8:00 a.m. - 4:30 p.m.

Planning is underway for the 22nd annual SW Ohio Digital Symposium to be held from approximfrom 8 AM to approximately 4:30 PM EST, Saturday, January 12, 2008 in Thesken Hall, on the Middletown Campus of Miami University, Middletown, Ohio. If you have a particular subject of interest which you'd like to present, or know of someone who is qualified to present, please contact, Jay Slough, K4ZLE k4zle <at> embarqmail <dot> com.

The 2008 program is being beaten into shape, and promises to be a good one. Times aren't fixed yet, but list in probable order of presentation is below

TIMES
Welcome and Introduction - Jay, K4ZLE and Carl, K8CM

to
Digital Communications Overview - Tom Holmes, N8ZM

be
VOA Moonbounce Project Update - Mike Murphy, KA8ABR
determined
Design & Manufacturing in the Internet Age, LP-100
- Digital Vector Wattmeter: A Case Study
- Larry Phipps, N8LP

Modern PC CAD Techniques - Bill Pollack, N0CALL

ARRL update - Joe Phillips, K8QOE & Jim Weaver, K8JE

Lunch

AmSat Update - Gerd Schrick, WB8IFM and Steve Coy,K8UD

EME using WSJT cluster of programs - Tom Lubbers, K8TL

PSK-Mail - Bill Kelsey, N8ET

Prize Drawing, Housekeeping and Farewell

There is no charge for attending the symposium. A box lunch will be available on site. Updates to the program will be posted here on the website, so please check in from time to time. For further information please contact

We will have a "demonstration room" for items on the program, plus any items which you'd like to display. We'd like, in particular, and specialty APRS stations, a working PSK-31

station, and any other systems which you've found useful.
For reference purposes, the program from last year's event is listed below. .

Bring your portable or semi-portable digital station!
We'd like to have as many types of stations, and as many demos as possible
We'll have a secured room, open during the registration and lunch period, for demos.
If you have an interest in CW, RTTY, Packet Radio, AMTOR, D-Star, etc., please plan to join us.
Send comments to: Jay Slough, K4ZLE

There is a big difference between Storm Spotters and Storm Chasers.

Storm Spotters are motivated by a desire to locate storm activity so they can provide information to the NWS and local authorities; information which might help reduce the loss of life and property. Storm Spotters usually try to put themselves in a fixed position near the storms so they can report on the storm as it passes, however mobile spotters try to track the movement of severe weather without putting themselves or those around them in danger.

Storm Chasers are driven by a desire to experience the thrills of being close to or in severe weather or a desire to photograph severe weather with the intent to profit from the images or video. Storm Chasers typically remain mobile, flocking towards the heart of severe weather. Storm Chasers have a reputation for creating traffic hazards. Some Storm Chasers are scientists who gather useful information for weather researchers, but most Storm Chasers are in it for their own satisfaction.

The NWS Skywarn program encourages amateur radio operators to be Storm Spotters. Most of the "documentaries" you see on television about severe weather are filmed by Storm Chasers. I have watched many of these documentaries and rarely do I see the people in the videos talking on amateur radio.

The local and national media encourages storm chasing in an effort to get "eyewitness" accounts on the air. Some local media outlets in some markets have become Storm Chasers themselves or they hire local Storm Chasers to provide information to the media first and the NWS or the local authorities second.

A personal anecdote: On May 30, 2004, I was in southern Hendricks County and northern Morgan County spotting severe weather activity. Based on reports I was hearing from the Central Indiana Skywarn net (www.w9nws.org), I positioned myself in the little town of Eminence. As the storm cell that I was personally observing passed to my north, I made my way north to Little Point, and then west towards Monrovia. Like spotters have been trained, I stayed south and west of the cell. Between Little Point and Monrovia, I spotted a tornado and reported it to our Skywarn net. I stayed with the tornado as it moved east until it dissipated into the clouds. That tornado re-formed south of

Plainfield and tracked across southern Marion County doing considerable damage. When I got to the intersection of I-70 and SR 39 immediately after the tornado had passed, I found the road clogged with what I characterized to be Storm Chasers. Some of them were physically blocking the road while they tried to capture the remnants of the tornado with their cameras. It was a frustrating and hazardous situation.

Now I'm cornfused. The posting being referred to distinguished between storm spotters and storm chasers. I am also a storm spotter but I'm not a storm chaser. The two are entirely different.

Walt, you said in your followup post that you're a storm spotter, yet you appear to be taking offense to the comments on storm chasers. So which are you? The poster's comments about storm SPOTTERS was very complimentary. He did get down on CHASERS, though.

Also, it's "bungee jumping", not "budgie jumping". A budgie is a bird, a parakeet.

1161. Re: [IndyHamRadio] Tornado Chasers

Yahoo group: IndyHamRadio
Date: 2008-01-12 15:16:55 UTC
From: Don Evilsizor
Topic: 1156 Message: 1161

All,

I can see the initial write up on the subject title
must of struck a raw nerve in some respects.

For my part both sides of the story simply address
personal thoughts and/or experiences on issues.
Since the initial comment did not direct anything
toward a specific individual I would find a personal
opinion being expressed as just that "opinion".

Offensive - maybe I would classify the topic more
into simply things to think about when we perform
as ham radio operators. Perceptions may error to
identify a entire group - on the other hand we
can be aware of other thoughts too.

There are numerous opinions out there in relation
to ham radio that conjure up various thoughts.

I know in the past and probably present many
hams have a tendency to look down upon all
CB operators as trash. And believe me that old
thought has been around for some time. But I
also remind various ham operators that in a few
club's history some of those CB operators have
turned out to be our finest ops along with being
the shakers and movers in ham radio.

Anyway here again I am just expressing my opinion
and do not want to be offensive. I like to be a team
player.

There is a big difference between Storm Spotters and Storm Chasers.

Storm Spotters are motivated by a desire to locate storm activity so they can provide information to the NWS and local authorities; information which might help reduce the loss of life and property. Storm Spotters usually try to put themselves in a fixed position near the storms so they can report on the storm as it passes, however mobile spotters try to track the movement of severe weather without putting themselves or those around them in danger.

Storm Chasers are driven by a desire to experience the thrills of being close to or in severe weather or a desire to photograph severe weather with the intent to profit from the images or video. Storm Chasers typically remain mobile, flocking towards the heart of severe weather. Storm Chasers have a reputation for creating traffic hazards. Some Storm Chasers are scientists who gather useful information for weather researchers, but most Storm Chasers are in it for their own satisfaction.

The NWS Skywarn program encourages amateur radio operators to be Storm Spotters. Most of the "documentaries" you see on television about severe weather are filmed by Storm Chasers. I have watched many of these documentaries and rarely do I see the people in the videos talking on amateur radio.

The local and national media encourages storm chasing in an effort to get "eyewitness" accounts on the air. Some local media outlets in some markets have become Storm Chasers themselves or they hire local Storm Chasers to provide information to the media first and the NWS

or the local authorities second.

A personal anecdote: On May 30, 2004, I was in southern Hendricks County and northern Morgan County spotting severe weather activity. Based on reports I was hearing from the Central Indiana Skywarn net (www.w9nws.org), I positioned myself in the little town of Eminence. As the storm cell that I was personally observing passed to my north, I made my way north to Little Point, and then west towards Monrovia. Like spotters have been trained, I stayed south and west of the cell. Between Little Point and Monrovia, I spotted a tornado and reported it to our Skywarn net. I stayed with the tornado as it moved east until it dissipated into the clouds. That tornado re-formed south of Plainfield and tracked across southern Marion County doing considerable damage. When I got to the intersection of I-70 and SR 39 immediately after the tornado had passed, I found the road clogged with what I characterized to be Storm Chasers. Some of them were physically blocking the road while they tried to capture the remnants of the tornado with their cameras. It was a frustrating and hazardous situation.

Now I'm cornfused. The posting being referred to distinguished between storm spotters and storm chasers. I am also a storm spotter but I'm not a storm chaser. The two are entirely different.

Walt, you said in your followup post that you're a storm spotter, yet you appear to be taking offense to the comments on storm chasers. So which are you? The poster's comments about storm SPOTTERS was very complimentary. He did get down on CHASERS, though.

Also, it's "bungee jumping", not "budgie jumping". A budgie is a bird, a parakeet.
:-)

I have no problem with that, Walt. I think any of us who do mobile spotting sometimes cross the line between spotting and chasing.

You know how some hams get mad when non-radio people equate amateur radio with Citizens Band? I guess I'm the same way about Storm Spotting vs. Storm Chasing. If I tell people that I go out to spot severe weather, the response I sometimes get is: "Oh, you're like those people I see on TV who see how close they can get to a tornado without getting killed. Those people are nuts!" Well, no, I'm not like those people you see on TV. I'm driven by a desire to locate severe weather and report it to the authorities. The people you see on TV are driven by something else.

>My greatest fear is that some yuppie will make storm chasing illegal.

If you read the storm chase stuff on the web, you'll occasionally see references to run-ins that chasers have had with law enforcement. Generally, law enforcement people in these situations have a legitimate concern for the protection of life and property and the maintenance of order. The chasers sometimes don't see it that way. My fear is that chasers who tear around the countryside trying to catch that perfect tornado, who create traffic hazards, or who don't respect the law will make life more difficult for the rest of us. So, yes, I do come down pretty hard on chasers. Not all of them deserve it. My mistake for painting all chasers with a broad brush.

From: lightsearch52
Topic: 1166 Message: 1170

OK, here is more info on the Twister Sisters. This entire posting link has gone a little oveboard IMHO. Melanie Metz KC0MXQ is a Tech. I do not know whether Peggy Willenberg holds a license as I never have seen her with mike in hand. I went to http://www.twistersisters.com/bios.htm and read their bios. Please do the same. They teach Skywarn and advanced Skywarn classes. They have given educational severe weather talks for 2 consecutive years at a HAM radio fest in St. Paul, MN.

Another fellow on the TV show is W0TOR, Eric R Whitehill, out of Fargo, ND. I have watched this show and heard them calling in sightings to area Skywarn nets. I know that there are thrill seekers who get in the way of emergency crews as I have helped with traffic control during fires and accidents, as well as post wind sheer damage in my area.

I just want to go on the record that the original information where this all started was about 2 dedicated women who have turned their love of weather events into a way to pay their travel expenses and now have a television show about it. If you watch the show, it is rare that they stop where there is an abundance of traffic, and I have never seen them blocking traffic.

I participate in Skywarn in the Terre Haute/ Vigo County area. I support all our efforts in getting information to the authorities in effort to protect lives.

Thank you for the opportunity to help clarify this information. My only wish is that they (TwisterSisters) would promote the Ham radio aspect a little more and I have emailed them that wish.

KA9QJG,

Well Don do not think you need to feel sorry at
least for my way of thinking. Apparently there
must of been some embers smoldering in the
leaf pile.

And you are right about one area, the wx is
being watched in various levels for ham radio.
We got to remember new hams appear to be
coming on board fairly often and many have
not experienced very much at this point in
time. So your original reference on the topic
I treated as positive.

I say this with those who test at our VE sessions
and some of the new ones now checking into our
Indiana Traffic Net (ITN).

It is great to have team players in amateur radio.

Don / KA9QWC

Hi Grant,
While it is possible that the band pass filter "might" help you, I would try to eliminate the source first, if that is possible. Try to determine which frequencies it is the strongest. Does it cover all your frequencies or only specific ones. Also try to determine if it happens only at your home location or other nearby locations as well. By this I mean, is it confined to your house or property, your neighborhood or your whole town.

If you are a member of the ARRL, there is considerable information on interference on their website.

I just recently upgraded my base station antenns, and now that my receive is opened I am getting some sparatic bursts of noise on the 2-meter and 440 band. it's weird....It comes and goes. I does it on several frequencies and the only way to eliminate it is to close my squelch very tight. Do you guys think I should install a band pass filter? I have looked at several models and these things are very expensive. Any ideas?

This interference has not shown it's face today. I have tried to pinpoint the cause, but I found out this may take awile. I have decided against the bandpass. I monitor other VHF and UHF frequencies outside the ham bands, and I really don't want to lose my reception. I am going to run a new ground from the base of my outside antenna down to my grounding rod, and also run a seperate ground from the back of my radio to the same rod outside. I currently have 3 ten foot masts outside supporting my Diamond X200A antenna, and at the base of the mast I ran a ground to my grounding rod. I was told today to run a seperate wire from the base of the antenna down to the rod. Maybe a good ground on the inside and the outside might help the interference.

A bandpass filter isn't going to do you much good if the noise is present in the band you're listening to. If the noise is due to front-end overload from a signal outside the ham band, it might help. But from what you described, it's broadband interference and the selectivity of the radio probably already limits what the radio is getting from outside the band. It won't limit what's already IN the band but neither will an external filter. Don't bother with a filter.

Hi Don,

I wrote this for eHam last fall...if you like Ham Radio podcasts, you might want to give it a looksee.

Jeff does a fantastic job with LDE.

I stumble onto this podcast on QRZ today. Jeff Davis, KE9V from Muncie, IN,
does a very nice job of telling an entertaining ham radio story.

73,
Don, W9DEW

1184. ARRL VHF Sweepstakes, Saturday/Sunday, 1/19-1/20

Yahoo group: IndyHamRadio
Date: 2008-01-15 15:23:08 UTC
From: Mark Thompson
Topic: 1184 Message: 1184

2008 ARRL January VHF Sweepstakes
General Rules
Object: To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0400 UTC Monday (January 19-21, 2008).
Entry Categories:
3.1. Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.2. Single Operator Portable
3.3. Rover.
3.3.1. Rover
3.3.2. Limited Rover
3.3.3. Unlimited Rover
3.4. Multioperator.
3.5. Limited Multioperator.
Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of signal report is optional.
Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count four points for each 902- or 1296-MHz QSO.
5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees x 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
Reporting:
6.1. Electronic submissions may be emailed to JanuaryVHF@... and hand-written paper logs or diskettes mailed to January VHF, ARRL, 225 Main St, Newington, CT 06111.
6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes.
6.3. Entries must be emailed or postmarked no later than February 20, 2008.
6.4. Entries may be submitted using the web applet at www.b4h.net/cabforms
6.5. Rovers who submit scores for the club competition must submit a second summary sheet

indicating QSOs and score if they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.
Miscellaneous:
7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
Awards: Certificates will be awarded in the following categories:
8.1. Single operator.
8.1.1. Top single operator in each ARRL/RAC Section for high and low power.
8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
8.2. Top single-operator portable in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)
8.3. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
8.4. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
8.5. Top limited multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
8.6. Top DX stations where significant effort or competition is evident.
Other:
9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” in November 2001 QST or on the ARRL Web at www.arrl.org/contests
9.2. For more information contact contests@... or (860) 594-0232.

From: Dan Evans
Topic: 1184 Message: 1185

I plan to go on a short Rover trip for the contest.

I'll be activating EM78, EM68, and maybe EM79 and EM69.

Let me know if you plan to be on, I'll look for you from the hilltops:-)

I should be on 144, 222, 432 and 1296 from EN50vc. Maybe 50 MHz if it looks like it will be open but at our distance it's not likely that we'd work on that band.

1187. Chicago D-STAR Repeaters On-the-Air & Internet Gateway On-Line

Yahoo group: IndyHamRadio
Date: 2008-01-16 04:17:02 UTC
From: Mark Thompson
Topic: 1187 Message: 1187
Attachments: 1 described; binary payloads are missing from this source WARC

The first D-STAR repeaters in the City of Chicago were installed last August by the NSRC (North Shore Radio Club).

The system's internet gateway came on-line on Friday, January 11th. You can access the repeaters at:

NSRC Digital Voice Repeaters
NS9RC B 442.09375 Mhz (+5)
NS9RC A 1292.2000 MHz (-20)

NSRC Digital Data Access Point
NS9RC 1242.200 MHz

The NSRC repeaters are located in the city of Chicago 6 miles north of downtown Chicago & 1/2 mile west of the Lake Michigan lakefront on a building 57 floors above ground level.

We are in the process of enhancing the D-STAR antenna system which should occur soon. The new antennas should result in D-STAR coverage similar to the existing NSRC FM repeater on 442.725 MHz at the same site providing excellent coverage to the city of Chicago and north, northwest, west & southwest suburbs, including coverage for boaters well into Lake Michigan.

The repeaters are open, but access to the gateway requires club membership or gateway authorization by another club or organization. More information about the North Shore Radio Club can be found at: http://www.ns9rc.org

The NSRC repeaters join the FRRL(Fox River Radio League) D-STAR repeaters which came on the air during the fall of 2006. They are:

FRRL Digital Voice Repeaters
W9CEQ B 442.10625 Mhz (+5)
W9CEQ C 145.2700 MHz (-600)

The FRRL repeaters are located in the far western suburb of Elburn, 45 miles west of downtown Chicago. They use high-gain antennas with a directional pattern towards the east on a 400 ft. tower and cover the west, northwest & southwest suburbs of the Chicago area. More information about the FRRL is at: www.frrl.org

We look forward to hearing you on the air whether you're in the Chicago area or using the D-STAR network.

73, Mark, WB9QZB
Chicago, IL

1189. ARLX002 Lunar Echo Experiment looking for Amateur Radio Participants

Yahoo group: IndyHamRadio
Date: 2008-01-17 20:17:00 UTC
From: Mark Thompson
Topic: 1189 Message: 1189

SB SPCL @ ARL $ARLX002
ARLX002 Lunar Echo Experiment looking for Amateur Radio Participants

ZCZC AX02
QST de W1AW
Special Bulletin 2 ARLX002
From ARRL Headquarters
Newington CT January 17, 2008
To all radio amateurs

SB SPCL ARL ARLX002
ARLX002 Lunar Echo Experiment looking for Amateur Radio Participants

The HF Active Auroral Research Program (HAARP) in Alaska and the Long Wavelength Array (LWA) in New Mexico are planning an additional lunar echo experiment for January 18-19.

Interested radio amateurs are invited to participate in this experiment by listening for the lunar echoes and submitting reports.

On January 19, listen on 6.7925 MHz from 0500-0600z, and on 7.4075 MHz from 0600-0700z. On January 20, listen on 6.7925 MHz from 0630-0730z and on 7.4075 MHz from 0730-0830z (depending on frequency occupancy at the time of operation, it may be necessary to adjust the frequency slightly).

Based on previous experiments, investigators believe it should be possible to hear the lunar echoes with a standard communications receiver and a simple 40 meter dipole antenna. The format for the transmissions will follow a five second cycle beginning on the hour and repeating continuously.

The HAARP transmitter will transmit for the first two seconds. The next three seconds will be quiet to listen for the lunar echo. Then HAARP will transmit again for two seconds, repeating the cycle for one hour. In the second hour, this five second repetitive cycle will be repeated at a different frequency. All transmissions from HAARP will be CW (no modulation).

Depending on ionospheric conditions, it may or may not be possible to hear the HAARP transmission directly via skywave propagation. Since HAARP will not be using any modulation, set your receiver on to CW mode to hear HAARP and the lunar echo. Investigators are interested in receiving signal reports from radio amateurs who may be able to detect -- or not detect-- the lunar echo or the transmitted skywave pulse from HAARP.

Submit reports via e-mail to mbreport@... and list your
call sign and the type and location of your receiving equipment and
antennas.

1191. 7 MHz Moonbounce Videos

Yahoo group: IndyHamRadio
Date: 2008-01-22 17:19:16 UTC
From: Mark Thompson
Topic: 1191 Message: 1191

7 MHz Moonbounce Videos

Last weekend Moonbounce tests on 7 MHz were conducted from Alaska. Both K7AGE and EB7FLW have posted videos on YouTube showing reception of the signals.
On the 19/20th January Amateur Radio operators from around the world listened in to the HF transmissions from the High Frequency Active Auroral Research Program (HAARP) in Gakona, Alaska.

Several UK Radio Amateurs received the moonbounce signals during the early Sunday morning transmissions.

The video by Randy K7AGE is at

1197. 2008 MARION COUNTY SEVERE WEATHER SEMINAR

Yahoo group: IndyHamRadio
Date: 2008-02-02 17:22:57 UTC
From: Don West
Topic: 1197 Message: 1197

From the W9RCA News Letter

2008 MARION COUNTY SEVERE WEATHER SEMINAR:
This year's Marion
County Severe Weather Seminar will be held on Saturday, Feb. 16,
starting at 9:00 AM at the Training Center (meeting place of the
Indianapolis Radio Club), 2820 N. Meridian St. All are welcome to
attend. You don't need to be a resident of Marion County or a member of
any particular group. Free! For more information, as well as other
weather related information, go to http://indyhams.org/seg/skywarn.
For more in-depth severe training see the article below.

2008 CENTRAL INDIANA SEVERE WEATHER SYMPOSIUM: Register Now:
2008 Central Indiana Severe Weather Symposium 2008 Central Indiana
Severe Weather Symposium.
2008 brings the next installment of the Central Indiana Severe
Weather Symposium, an all day session geared towards providing more
advanced information for spotters. The 2008 symposium will be held on
Saturday, March 1st, 2008, from 8:00 am to 4:00 pm, at the Valle Vista
Conference Center, 755 East Main Street, Greenwood, Indiana, and is
cosponsored by the Central Indiana Chapter of the American
Meteorological Society and National Weather Service Indianapolis.
Symposium planning is still ongoing, so check back at this website for
updated information as the symposium date approaches.

Confirmed speakers as of this time include:

Dan McCarthy Meteorologist-in-Charge, NWS Indianapolis Dave Tucek
Warning Coordination Meteorologist, NWS Indianapolis John Kwiatkowski
Science and Operations Officer, NWS Indianapolis Paul Sirvatka
Professor of Meteorology, College of DuPage Angela Buchman Broadcast
Meteorologist, WISH-TV 8 Bill Gosnell Emergency Manager, Delaware
County, Indiana Logan Johnson Meteorologist, NWS Indianapolis Joseph
Nield Meteorologist, NWS Indianapolis

A student poster presentation is also planned for the symposium.

Students presenting posters will be able to register at a discounted
rate. Student registrations must be accompanied by a copy of your valid
student ID.

1198. ARRL/TAPR Digital Communications Conference in Chicago Dates Announced

Yahoo group: IndyHamRadio
Date: 2008-02-05 17:02:03 UTC
From: Mark Thompson
Topic: 1198 Message: 1198

Dates for ARRL/TAPR Digital Communications Conference in Chicago Announced (Feb 4, 2008) --

The Tucson Amateur Packet Radio Corporation (TAPR) has announced that the 2008 ARRL/TAPR Digital Communications Conference will take place September 26-28 at the Holiday Inn Hotel in Elk Grove Village, Illinois, a suburb of Chicago, near O'Hare airport.

The conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results and practical applications. Forums will feature the latest developments in Amateur Radio digital communications, as well as demonstrations of emerging digital technology.

More information is available on the ARRL/TAPR DCC Web site, http://www.tapr.org/dcc.html

1199. Emergency Communications class

Yahoo group: IndyHamRadio
Date: 2008-02-06 01:27:58 UTC
From: Chris Lantaff KE9YK
Topic: 1199 Message: 1199

An Emergency Communications class will be held at the Evansville/Vanderburgh EMA office located at 708 Stanley Ave. in Evansville at 6:00 PM Thursday Feb. 21 and Thursday Feb. 28.

This is a two-part class which will cover emergency communications equipment, planning and procedures. The course will be presented by Brian Esche WB9QVR, John Marley WB9EFH and Chris Lantaff KE9YK. The course content will be similar to that of previous classes; however, if you've attended this training in the past you're welcome to attend again as we'd like to have your input and the benefit of your experience.

There is no charge for this class; however, if you plan to attend please send an e-mail to WB9QVR (besche at wowway dot com) so we'llhave an idea of how many participants to expect.

Everyone is welcome - please feel free to pass this note along to anyone you think might be interested.

-Chris Lantaff KE9YK

1200. weather spotter training

Yahoo group: IndyHamRadio
Date: 2008-02-06 01:47:37 UTC
From: Chris Lantaff KE9YK
Topic: 1200 Message: 1200

The Tri-State Amateur Radio Society, in partnership with the
Evansville / Vanderburgh County Emergency Management Agency,
is again offering free weather spotter training in 2008.

We are hosting a Saturday morning and a weekday evening class to
better fit into your busy schedule. As in the past, this is free training
courtesy of the National Weather Service, Paducah Kentucky.

Both training sessions will be held at the Evansville Public Library,
Central branch Browning Room, located at 200 SE Martin Luther King Jr. Blvd.

Two sessions available,
Saturday morning February 16, 2008 9:00 AM - 12:00 PM
or
Wednesday evening February 20, 2008 6:00 PM - 9:00 PM

-Chris KE9YK

1201. Digital TV Converter Box Coupon Program

Yahoo group: IndyHamRadio

Shawn...thanks for the info. Personally I don't like this idea though.
It's not a good deal for the smaller independent broadcasters.
BTW...you only get more channels by decreasing the quality of the
picture....the idea of a panic over TV is something I find funny.
We're on cable so I guess I won't need a box.

From: Alex Whitaker
Topic: 1201 Message: 1205

That would probably be a good idea.....I pay for satellite TV, and all the stations have so many commercials as to almost make them unwatchable. I would bet that they have at least 20 minutes of commercials per hour.....totally loaded up. And, most of the stations don't have anything decent to watch anyway.

Bah, humbug,

Alex

Mike...
Thanks for passing along your announcement about your upcoming training. I have been announcing it each week on our test, along with the other training
upcoming in other counties. It's also on our EMA website and the Anderson Repeater Club site too. Delaware County and Wayne County have announcements
floating around too that we are promoting.

Attached is the announcement about our class. Please post it whereever possible.

73,
Steve

1210. Field Day 2008 Rules and Forms Now Available

Yahoo group: IndyHamRadio
Date: 2008-02-09 21:14:03 UTC
From: Mark Thompson
Topic: 1210 Message: 1210

Field Day 2008 Rules and Forms Now Available

It's that time of year again -- time to start gearing up for Field Day, ARRL's flagship operating event. Field Day, held the fourth full weekend in June, brings together new and experienced hams for 24 hours of operating fun. ARRL Field Day Manager Dan Henderson, N1ND, says there are several rules changes this year, mainly concerning "Get on the Air" (GOTA) stations and the elimination of the Demonstration Mode Bonus Category. The complete Field Day Packet can be downloaded, http://www.arrl.org/fieldday from the ARRL Web site. A full 2008 Field Day page on the ARRL Web site will be coming in the next few weeks.

2008 Rules Changes

GOTA (Get on the Air) stations are those stations set aside by Field Day teams designed to get non-hams or newly licensed hams on the air. Unlike in past years where GOTA stations were limited to only one band, the 2008 rules state that these stations may operate on any authorized HF or VHF Field Day band. Keep in mind that only one signal may be transmitted from the GOTA station at any time.

Henderson said the eligibility for operating the GOTA station has changed slightly: Anyone who has been licensed since Field Day 2007 is eligible to operate the GOTA station, regardless of license class.

For 2008, the Demonstration Mode Bonus category has been eliminated and replaced by an Educational Activity Bonus worth 100 points. "This bonus is intended to encourage clubs and groups to do some more formal educational activity during their Field Day operation," Henderson said. If you have any questions concerning what activities might be appropriate for this bonus, Henderson said you should submit them via e-mail, fdinfo@....

Be sure to read the Field Day rules and FAQs in the 2008 Field Day Packet for details of these changes. There are also numerous small changes in the FAQs and support materials in the packet that should help groups and individuals as they plan their Field Day activities, Henderson said.

Get the Word Out!

The 2008 Field Day Packet also includes an expanded Press Kit, thanks to the work of ARRL Media and Public Relations Manager Allen Pitts, W1AGP. Included in this expanded portion of the packet is a sample "Field Day Proclamation" for those groups who work with local city or town officials toward getting a Field Day Week declared in their location.
"We are excited that historic station K6KPH will once again participate transmitting the W1AW special Field Day Bulletin on the West Coast," Henderson said. More details are available in the Field Day Packet.

Information concerning the popular Field Day pins and T shirts will be announced in the next few weeks.

Henderson said that those wishing to obtain a complete Field Day Packet via US mail need to send a 9 x 12 inch self-addressed, stamped manila envelope with 5 units of postage to Field Day Packet Request, ARRL, 225 Main St, Newington, CT 06111. Please allow 2-3 weeks for delivery.

If people wish to order display kits for their tables at Field Day, please contact Debra Johnson, K1DMJ, ARRL Education Manager, 225 Main St, Newington, CT 06111, tel 860-594-0296. The cost for the display kit ranges from $8-$12 depending on shipping. To ensure having the kits in time for Field Day, you are encouraged to order them no later than June 13.

2008 Field Day Logo: Ride the Waves

ARRL member Mary Von Lintig, KV2M, suggested the slogan for Field Day 2008: "Ride the Waves." A member of the South Jersey Radio Association, Von Lintig, inspired by the 2007 Field Day "bug" in last year's logo, enjoys VHF contesting and ARRL Sweepstakes and recently joined the Frankford Radio Club. "And, I like ARRL Field Day of course," she says. "I usually operate 21 hours of the event!" An avid portable radio operator, she has even been on-the-air while operating her lawnmower. "They also call me the YL on rollerblades." Mary and her husband Richard Van Lintig, KV2R, live in Voorhees, New Jersey. This year's logo was designed by ARRL Graphic Arts Supervisor Sue Fagan, KB1OKW, and Senior Technical Illustrator David Pingree, N1NAS.

1211. Indiana Television Reporter Receives Bill Leonard, W2SKE, Professional Media Award

Yahoo group: IndyHamRadio
Date: 2008-02-09 21:18:34 UTC
From: Mark Thompson
Topic: 1211 Message: 1211

Indiana Television Reporter Receives Bill Leonard, W2SKE, Professional Media Award
At the ARRL Board of Directors meeting last month, on the recommendation of the ARRL Public Relations Committee, the Board voted to confer the 2007 Bill Leonard, W2SKE, Professional Media Award to a Fort Wayne, Indiana television reporter.

Alyssa Ivanson, of WANE-TV, http://www.wane.com/ News brought public attention to Amateur Radio by producing and reporting a television story, http://www.wane.com/Global/category.asp?C=124439&nav=0RYb on the efforts of Emery McClendon, KB9IBW, also of Fort Wayne, to create and promote Amateur Radio Military Appreciation Day. McClendon traveled to Washington, DC and met with First Lady Laura Bush as part of his promotion of Amateur Radio.

The annual award honors a professional journalist whose outstanding coverage in TV, radio, print or multimedia best reflects the enjoyment, importance and public service value of Amateur Radio. The award was created as a tribute to the late CBS News President Bill Leonard, W2SKE. He was an avid Amateur Radio operator, and most active on the air during the 1960s and 1970s.

As the winner of the Bill Leonard Award, Ivanson will receive a plaque and a cash prize of $500. ARRL Media and Public Relations Manager Allen Pitts, W1AGO, said, "There were nine excellent nominations for the award this year, and voting was tight. Submitted materials were judged by the ARRL's national Public Relations Committee and their final recommendation was approved by the Board of Directors at the January 2008 meeting."

"I am honored to win the Bill Leonard Award. It was a privilege to meet Emery and tell the public about his efforts to bring a little bit of 'home' to the troops through Ham radio and ARMAD," Ivanson said.

Ivanson, the weekend anchor at WANE, graduated magna cum laude from Ball State University's Honors College with a degree in telecommunications; she joined WANE in January 2006. "The news business is exciting; each day presents new challenges and rewards. I love meeting so many new people and never knowing what each day holds," she said.

Ivanson is no stranger to journalism awards. In her first year at WANE-TV, she was awarded third best reporter in the state by the Indiana Associated Press. In college, she was awarded the prestigious Edward R. Murrow award for her work on a morning radio program. She was the first recipient of the Jack McQuate Associated Press Scholarship and a three-time winner of the Indiana Broadcaster's Association Scholarship.

When she's not at work, Ivanson, a member of Alpha Omicron Pi Sorority, enjoys spending time with her family and friends, going to the theater, hosting dinner parties and spelunking. According to Emery McClendon, there are two hams in the WANE newsroom who will be "encouraging" Ivanson to add Amateur Radio operator to her list of accomplishments very soon.

All:

The sponsors for this year's training are Henry County Amateur Radio Emergency Services and Henry County Sheriff's Reserve Unit. I would like to thank Sergeant Goodwin for hosting the training location. This will be at their monthly training. The training will be held at the Justice Center Training room/EOC at 1215 Race in the Basement across from dispatch on Saturday, March 15th at 7:00 PM. I would like to encourage all available Dispatchers, Sheriff's Deputy's, Police Officer's, EMS personnel, Fire Department personnel, Amateur Radio operators, and the Public to attend this vital training. Hope to see everyone at the training.

View/Print The NWS Spotter Information Brochure
<http://www.crh.noaa.gov/images/ind/spotter%20information4%20panel_bw.pdf>
.

Frequently asked questions about spotter sessions:

1. Do I need to preregister for these sessions? No. All you need to do is arrive at the proper time and location.
2. About how long do the sessions last? Approximately 2 hours.

3. Do I have to live / be a spotter in the county that I take the training session? No. The training sessions are identical.

Thanks for the invite to the spotter class.

You gave the county, and the street address (1215 Race), but not the city/town. For those of us unfamiliar with the roads in Henry County, (or where in Hoosier-land Hentry county even is) what city is "1215 Race" (Street?) in?

Remember that this list goes out to hams all over INDIANA, not just Henry county. Me, I'm lucky if I can remember the 4 counties N/S/E/W of Indianapolis/Marion county. I don't even know the other 4 that are catty-corner to Marion county, that make up the rest of the "donut".

Please to remember the 4 W's: WHO-WHAT-WHERE-WHEN.

It's nice of you to invite the other hams all over Indiana, but please make the information as idiot-proof as you can. Give us something (full street address and town) so we can type it into Mapquest or maps.google.com.

Luvs ya bunches!

Dave. kc9brz.

1224. The Bank Job movie and Amateur Radio

Yahoo group: IndyHamRadio
Date: 2008-02-15 18:05:18 UTC
From: Mark Thompson
Topic: 1224 Message: 1224

The Bank Job movie and Amateur Radio

A new British movie The Bank Job features Amateur Radio.

Due for release at the end of February The Bank Job is inspired by an extraordinary true event, a daring, unsolved robbery, which took place more than 35 years ago in London.

The robbery made headlines for a few days and then disappeared - the result of a UK Government ‘D’ Notice, gagging the press.

Pye handhelds are used by the criminals in the movie and they are intercepted by a Radio Amateur who becomes involved in the attempt to catch them.

On the official website at http://www.bankjobmovie.co.uk/ the "Trailer" option gives you 5 movie clips to view.

The Pye handhelds can be seen in movie clip 2 titled "No Names Eddie" and halfway through clip 5 "Tightening The Net" there is what looks like an Amateur Radio HF rig from the 60's or 70's (possibly Yaesu ?).

UK film censor rating: 15

USA MPAA Rating: R for sexual content, nudity, violence and language.

The Bank Job website
http://www.bankjobmovie.co.uk/

Greetings Indy Ham Radio Group,

I am new to the groups and thought I would post a brief introduction and a request.

My name is C. L. Hankins II I live in Indianapolis, Indiana I am attending college at Ivy-Tech working on a dual degree in Emergency Management and Fire Science. I am a state certified CERT instructor, member of IndyCERT, and very active in the CERT program.

I have a FCC license for GMRS and would like to acquire a HAM radio license however I would like to find someone to mentor me on that project. If anyone is interested please contact me at clgrarulfr@... <mailto:clgrarulfr@...>

Thank you for your time,

C. L. Hankins II

Subject: [IndyHamRadio] JC ARTS Club Meeting

The JC ARTS had a meeting Saturday afternoon at 5PM at Starbucks in Seymour. The following information was discussed.

1: Herschel (Director) is interested in changing his 2-meter coordination, 145.430, to the clubs call sign. Although the club does primarily use this repeater, the rest of the officers did not feel that changing the call sign was necessary. However, if Herschel would still like to change the coordination, there will be no opposition and the rest of the club will welcome the change.

2: The Columbus Hamfest is approaching soon and we would like to rent a table. We will use the table to show what we are offering as a club as well as sell some items for fund raising purposes. I will email Marion soon regarding this request and find out the payment information. I am planning on attending as a Deputy Electronics employee. Our store will be contacting CARC on Mon or Tues requesting 3 tables next to the 1 for our club so I will be able to work both at the same time. If anyone has any information to bring, items to donate, or would like to come visit, please feel free to give advanced notice or just stop by.

3: Field day preparations are being made regarding the special event insurance required by the State of Indiana. We have been told by the property manager of the Jackson-Washington Forest the we will be authorized to use the area of the fire watch tower in Brownstown-Vallonia area for those days (38"50'36N 86"02"08W). This will be a NON-conventional powered operation. Anyone with marine, automotive, or other deep cell batteries, please let me know if we may borrow them for this event. We will be looking for a portable generator as well as have solar power. I will be contacting a family member at Rose Hulman IT in Terre Haute and try to acquire the solar power equipment.

4: We have briefly spoke with Nick Klinger KC9JOY regarding linking our 2 repeaters. The club has decided to pursue this task for nets and severe weather. We do not want a permanent link at this time. We do not think our repeater should be put to that type of work. However, we do believe that this will drastically improve the weather reporting to Indianapolis from Jackson county and surrounding areas. From my understanding, the current simplex repeater is somewhat difficult to use as well as not very effective. This is NOT for competition matters, merely another option for the people of the surrounding areas.

5: Work needs to be done to repeater. We know this and will be more than happy to complete this work very soon. We do not like the signal going into the repeater at times. We believe we have a solution. However, solutions cost money. We are planning on installing the dual band antenna donated by Deputy Electronics at 250' and installing either LMR400, 600, or 7/8 hard line. We may have a solid piece of hard line and, if so, that is what we will use. Otherwise, we will use a solid piece of LMR 400 or 600. This will fix the issues we are having with the reception of the repeater. We are also planning on changing the tail squelch to drop after 1/2 second. Right now it is about 2 seconds. We are also changing the timeout to 2 minutes. This work will be starting soon and hopefully be completed within 45 days.

6: Our meeting time has been proposed for Monday evenings at 6:30 PM. This decision is waiting on input from all members and we will post the decision as soon as one is made. We have a few possible choices for a meeting place, but have not decided on one yet.

7: Nets have been moved to Sunday evenings at 7pm preceding the Orange County net. This decision was made in an attempt to allow as many active members and friends the ability to check in. Please know that there is no possible way to decide on a "perfect" time for everyone.

8: We have spoke about making some club QSL cards. We will most likely use the graphic located on the JC ARTS website. http:///www.jcarts.info

9: We are planning on filing for our non-profit status as well as incorporating the club. We believe this will allow us to provide more to our community in many different ways.

Please feel free to forward this information to those who are interested in the progress being made. We are looking for more members to help share the workload. Right now, we are ALL somewhat busy in our personal lives and have not had very much time for the club. Hopefully, this year will provide many blessings and improvements.

Be well and 73,

Shawn KC9LII

We are planning on installing the dual band antenna donated by Deputy Electronics at 250' and installing either LMR400, 600, or 7/8 hard line. We may have a solid piece of hard line and, if so, that is what we will use. Otherwise, we will use a solid piece of LMR 400 or 600. This will fix the issues we are having with the reception of the repeater. We are also planning on changing the tail squelch to drop after 1/2 second. Right now it is about 2 seconds. We are also changing the timeout to 2 minutes. This work will be starting soon and hopefully be completed within 45 days.

6: Our meeting time has been proposed for Monday evenings at 6:30 PM. This decision is waiting on input from all members and we will post the decision as soon as one is made. We have a few possible choices for a meeting place, but have not decided on one yet.

7: Nets have been moved to Sunday evenings at 7pm preceding the Orange County net. This decision was made in an attempt to allow as many active members and friends the ability to check in. Please know that there is no possible way to decide on a "perfect" time for everyone.

8: We have spoke about making some club QSL cards. We will most likely use the graphic located on the JC ARTS website. http:///www.jcarts.info

9: We are planning on filing for our non-profit status as well as incorporating the club. We believe this will allow us to provide more to our community in many different ways.

Please feel free to forward this information to those who are interested in the progress being made. We are looking for more members to help share the workload. Right now, we are ALL somewhat busy in our personal lives and have not had very much time for the club. Hopefully, this year will provide many blessings and improvements.

Be well and 73,

Shawn KC9LII

Date: 2008-02-18 00:58:41 UTC
From: Mark Thompson
Topic: 1232 Message: 1232

The Dayton Hamvention is only 3 months away.

As in past years I have reserved a block of 10 double rooms at a suite-type hotel in Dayton. I get these rooms for friends & acquaintances. Since I usually have some extra rooms available if you're interested in a room let me know.

Details about the Hamvention are available at:

www.hamvention.org

At the Hamvention I will be monitoring 147.435 (107.2 Hz decode) simplex & 441.000 D-STAR simplex.

My group goes out to dinner on Friday night at the Old Hickory BBQ near the Univ. of Dayton and on Saturday night at the Spaghetti Warehouse in downtown Dayton. You're welcome to join us.

See you at Dayton.

1233. SDR Presentation at Chicago ARRL/TAPR DCC

Yahoo group: IndyHamRadio
Date: 2008-02-18 01:29:45 UTC
From: Mark Thompson
Topic: 1233 Message: 1233

SDR Presentation Announced for Chicago ARRL/TAPR DCC(Digitial Communications Conference) Sunday Seminar

'Software Radio Through the Looking-Glass'

Phil Harman, VK6APH

One of the most exciting, and rapidly evolving, aspects of Ham Radio is that of Software Defined Radios. What was initially left to technical minded experimenters is now starting to move into the main stream. The latest SDRs offer performance equal to the best analogue radios on the market.

For those brought up on analogue radios there is quite a learning curve to understand exactly how these new radios work, what they do well and what shortcomings there have.

Phil will guide us through the basics of SDRs right up to the very latest techniques that digitise signals directly at the antenna socket. Using diagrams and a minimum of math he will cover such subjects as front end design, mixers, why we need I and Q signals, digital up and down conversion,AGC techniques, noise blanking and high efficiency Power Amplifiers.

The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long!

Biography:

Phil Harman, VK6APH, has held a ham license for over 40 year. For much of this time he has worked on leading edge RF techniques related to receivers and transmitters. Phil's current passion is the development of fully digital HF radios. Phil co-writes the Software Defined Radio column in the
RSGB Radio Communications journal and also co-authored the SDR chapter in the latest RSGB Handbook.

For those of you may or may not know that there is a website devoted to Indiana Weather only. And you my have heard the Owner on a Radio Station near you. Brandon Redmond has been sending out forecast for Indiana for awhile now. For those that like weather you will find his forecasts are normally right on the money. This has been difficult for most forecasters because of "La Nina" event happening now with the current sea surface temperature running -1.2 degree below normal. Anyway , back to the main reason for sending this message is to get the word. For those that used to get the Dr. Arnold e-mails occasionally, remember the great detail that was given in those e-mails? while Brandon does the same thing, his track record this year has proved that you can accurately forecast the weather. If you pay attention to details your receiving. You can decide this stuff for yourself and make your own decision on whether he is right or wrong.

Anyway, you can visit http://www.indianaweatheronline.com for his complete forecast and while your they're sign up to the forum.

Sincerely,

James Smith - K9APR

1243. ARRL's VHF Digital Handbook (Coming in early March)

Yahoo group: IndyHamRadio
Date: 2008-02-21 21:15:04 UTC
From: Mark Thompson
Topic: 1243 Message: 1243

ARRL's VHF Digital Handbook
-- by Steve Ford, WB8IMY
Ham radio operators are using digital radio applications for fun, technical achievement, and public service. And it’s no wonder. Getting started often requires little more than a VHF radio and a computer.
Without complicated “owners manual” jargon—ARRL’s VHF Digital Handbook presents the material through a unique how-to approach and friendly, conversational style. Readers will understand how to setup and operate their equipment and software, and make the best use of their VHF digital station.
Contents:

Packet Radio Fundamentals: All the basics including TNCs, operating commands, and networks (such as DX Packetcluster).
APRS – The Automatic Position Reporting System: Track moving objects on maps (other stations, public service vehicles, marathon runners, etc.). Connect your own GPS receiver and transmit your location even as you’re moving!
D-STAR: Enjoy high-speed digital voice and data on the growing network of D-STAR repeaters.
High Speed Multimedia: Discover how you can set up your own wireless Amateur Radio data network by modifying over-the-counter gear such as routers and access points. It’s ham WiFi consumers can only dream about!
Digital Meteor Scatter and Moonbounce: Explore weak signal operating using the software masterpiece WSJT by Joe Taylor, K1JT.
Technical Descriptions: In-depth information about AX.25, D-STAR and APCO-25 protocols. Plus, digital applications in public service and emergency communications: Packet radio, APRS, Winlink 2000 and more!
Also available: ARRL's HF Digital Handbook
First edition, © 2008, published by American Radio Relay League, Inc.
(ISBN: 0-87259-122-0) #1220 -- $19.95
Coming in early March!

ARRL's HF Digital Handbook
-- by Steve Ford, WB8IMY
ARRL’s HF Digital Handbook is your guide to understanding the most active HF digital communication modes in use today. There is something here for every radio operator—beginners and more advanced operators alike. And, as this technology rapidly advances, your increased understanding of digital communication techniques will make certain that you stay in the race as new modes and methods unfold.
This fourth edition book includes expanded station setup information, discussion of PSKMail and other varieties of PSK, new content on Olivia, DominoEX, HF digital voice and image modes, and Automatic Link Establishment.
Just getting started? All it takes is your sound-card-equipped computer and your HF transceiver. ARRL’s HF Digital Handbook will guide you through the rest!
Contents:
Assembling Your HF Digital Station
RTTY

PSK31
PACTOR
Winlink 2000
Clover
Hellschreiber
MFSK
G-TOR, MT-63, Throb, Olivia and DominoEX
HF Digital Contesting
HF Digital Voice and Image
Automatic Link Establishment …and much more!
Also available: ARRL's VHF Digital Handbook
Fourth edition, © 2007, published by American Radio Relay League, Inc.

Alex,
Good to hear from you. Spotter training is Tuesday March 4th at 7PM at the EOC. If you want a more advanced course the NWS will be holding a day long seminar March 1st at Valle Vista country club in Greenwood. It will run from 8AM-4PM. Cost is about $35.00 and includes something for breakfast and a lunch. If you are interested check on line for more info. Otherwise we'll see you March 4th.

The 146.835 repeater is up and running from a new home in northern Johnson County.

The Mid-State Amateur Radio Club maintains a two-meter repeater for the use of all licensed amateurs. The repeater serves as an on-the-air meeting place for our club members, and facilitates communications during club events. Additionally, the repeater serves as the official Skywarn repeater for Johnson County, Indiana. Whether looking for information on severe weather - or just looking for conversation to shorten your daily commute - tune in to the WA9RDF repeater.

Our repeater has recently moved to a new home, courtesy of the White River Fire Department. Our repeater is located at the home of the new White River Township Fire Department Station 51, near the intersection of State Road 135 and Olive Branch Road, just south of Greenwood.

Make sure to check out our weekly net, held every Sunday at 1900 (7 PM) local time. This is a great chance to meet other local amateur radio operators and test your operating skills. Newsline is often played, allowing net participants to get the latest news about the amateur radio hobby. For those without the license or means to check in over the air, we offer an email check-in. Just send an email with your name and contact information to netcontrol@..., and we will record your check-in!

Output: 146.835 Mhz

1252. FW. Message

Yahoo group: IndyHamRadio
Date: 2008-02-25 18:28:17 UTC
From: James Smith
Topic: 1252 Message: 1252

For those that haven't signed up to Indiana Weather Online this is a forward for you. Brandon has been calling for this storm for several days and the media wasn't indicating anything. Except for now!!!

IndianaWeatherOnline.com Winter Storm Alert
Issued: February 25th, 2008 at 5:30 AM by Brandon Redmond

While I have little no support from any other local meteorologists, I still have confidence that accumulating snow will develop tonight and that the snow storm could be major for areas North of Interstate 70 all the way to the Michigan line.

Light rain will develop tonight and I look for a changeover to snow to begin across Northwest and West Central Indiana by 4:00 am. As the freezing line sweeps Southeast across the area, I look for rain to change to snow across all of Eastern Indiana and Western Ohio by 7:00 AM.

Snow will continue through the day on Tuesday and will likely become quite heavy through the morning and afternoon hours and I actually expect the snow to continue into the evening and possibly overnight hours as a deformation zone/throwal develops across Central Indiana and Western Ohio.

Snowfall rates on Tuesday could be quite heavy with rates approaching 1-2 inches hours at times in the height of the storm. The other big story is that as the low pressure system strengthens, winds will increase and blowing and drifting will become a major story. In fact, I expect that winds could gust to 45 mph across the Northeastern half of Indiana and all of Western Ohio and this could create whiteout conditions to near blizzard conditions at time.

Total snowfall accumulations will range from 2-4 inches across Terre Haute, Indianapolis, Crawfordsville and Noblesville.

Farther Northwest 4-6 inches is likely at Lafayette, Tipton, Kokomo, Anderson, Logansport and Delphi.

Richmond, Connersville, Liberty, New Castle, and Eaton (Ohio) will see 3-5 inches.

Dayton (Ohio) will see 2-3 inches.

Winchester, Muncie, Portland, Marion Huntington, Decatur, Berne, Greenville (Ohio), Sidney (Ohio), and Celina (Ohio) will see 4-7 inches.

Gary to South Bend over to Fort Wayne will see 6-10 inches.

Once again today, I have doctors appointments in Dayton all day, so I doubt I get a chance to send out another update before I leave, but I will try to send out an update first thing once I arrive back this afternoon.

Also just a few quick notes about the website. By going to IndianaWeatherOnline.com, you can click on the discussion button and view our brand new blog/discussion page. I have a feeling you will really like it.

Also we have a brand new website, http://www.LetsTalkWeather.net

Finally, there has been some confusion, but if you go to www.IndianaWeatherOnline.com and click one of the zone buttons such as Eastern Indiana, Southern Indiana, etc., it will take to you to our personalized forecast page for your area of the state which includes your extended forecast!

Stay tuned to http://www.IndianaWeatherOnline.com,

Brandon Redmond

1256. Fw: D-STAR at the 2007 Medtronic Twin Cities Marathon

Yahoo group: IndyHamRadio

D-STAR at the 2007 Medtronic Twin Cities Marathon
By Erik Westgard, NY9D
ny9d@...
March 1, 2008

Minnesota hams put the D-STAR system to work.

The Hennepin County Communications Van joins other Amateur Radio vehicles and trailers in D-STAR integration testing.

Ryan Westgard standing by to scan the bib numbers into the Amateur Radio tracking database of incoming injured runners at the Medical Tent at the 2007 MTCM.

The 1st generation ICOM RP-1 repeater.

The finish line area at the 2007 Medtronic Twin Cities Marathon.

The 40x80 foot Medical Tent and attached Amateur Radio managed Interagency Dispatch Center at the MTCM 2007.

Peter Corbett, KD8GBL, monitors the database server and D-STAR and packet uplink transmitters in the data trailer at the 2007 MTCM event.

The MTCM 2007 Family Medical Information Tent – amateurs in yellow shirts and community medical volunteers use 802.11b networked laptops to query the Amateur Radio database of runners who have left the course.

Kelly Black, KB0GBJ, (L) and Max Klingert, KB0RSQ, led the software development team for the Linux appliance back end to the D-STAR repeaters and our database uplink system for the 2007 MTCM.

At first glance, the Minneapolis/St Paul Metropolitan Area has a good Amateur Radio infrastructure for public service events. We have more than 40 FM voice repeaters, (about half are on good sites) and two 1200 bit/s packet radio networks, three counting APRS. An increased focus on data applications by served agencies has strained our data capabilities.

While it is certainly possible to use the operating range of commercial Internet services, our stated goal of providing backup communications makes this an imprudent choice. Many of our agencies use the Internet for primary data communications, and using the Internet to back up the Internet may be fine under normal conditions but is a poor design for truly catastrophic emergencies. The recent collapse of the I-35 bridge in Minneapolis was marked by a well publicized overload of the commercial cellular telephone networks in the area of the incident, and in some cases, cellular data and voice services share limited bandwidth to the cell sites.

A Big Marathon with Big Communication Needs
The Medtronic Twin Cities Marathon is one of the larger marathons in the United States in terms of starting runners, with more than 6100 in 2007. There is also a 5000 runner 10 mile race on a similar course at the same time, and hundreds of thousands of spectators and family members also participate in the weekend of events. The race organization has long relied on Amateur Radio for backup medical communications, utilizing more than 130 amateur operators spread across the racecourse and finish line area. We run five voice nets and also provide net controls for the medical channels on the rented UHF business band radios used by the medical teams.

On the data side, we track the location only (for HIPAA reasons) of runners who seek medical attention or leave the course for other reasons. This data is input based on voice reports to the on-course net controls and from information input at runner bus stops and at the medical aid stations throughout the course. For inputting information out on the course, packet and a character interface have worked reasonably well, but we do not have enough data bandwidth for much in the way of database queries. Families and medical teams are always inquiring about the location of runners. This requirement is acute at the finish line, when runners do not appear in the Family Meeting Area on schedule. We set up six laptop computers in the Family Medical Information tent, where queries can be made. We also have computers in the main medical tent for runner check-in and check-out and in the communications center where finish line EMT and physician “(Cardiac) Arrest Teams” are dispatched.

This much data moving around at the finish line is well beyond the capability of packet radio. We also needed an easy-to-use Web interface to our database so untrained and non-amateur volunteers could be utilized. For this reason we have implemented commercial 802.11b access points from our data trailer. Our database, called Trivnetdb, has a packet AX.25 interface and TCP/IP support for Web and telnet users.

Enter D-STAR
The recent release of the ICOM D-STAR L-band repeaters and radios (such as the ID-1) presented a possible solution to our problems across the course. If several wide area repeaters were installed, we could access our database of runner status across the entire course using a familiar Web interface. We could perform as many queries as we wanted, and be able to handle high data volumes if we had hot or other unfavorable weather.
Doug Reed, N0NAS, bought our first RP-1D repeater under the ICOM “buy five ID-1s and get a free repeater” program. After a few sessions of testing and evaluation in monthly work sessions held at a local fire station, we decided to install the repeater on one of our good sites. The repeater as-is allows one-to-one sessions between ID-1 radios, encapsulating the 90 kbit/s of data packets in amateur call signs. This was a problem though, as our database is located in a trailer at the marathon finish line, and we wanted to have multiple users access the database at once.

The repeater has an Ethernet interface on it. Multiple remote ID-1 users are allowed to reach the Ethernet. You assign an IP address to the Ethernet, and if the users of remote ID-1s are in the same subnet they can reach the Ethernet. This is used for the ICOM Internet Gateway software, or you can put your own server or router there. Max Klingert, KB0RSQ, from our software team has been experimenting with Linux appliance computers removed from point-of-sale systems. He uses a release of Slackware Linux on a flash drive so no hard drives (prone to failure in our experience) or fans would be needed on a repeater connected computer. We provide a tiny Web site on each repeater, and also a copy of Citadel, an open source mail and conferencing package. We also wrote a packet AX.25

interface for Citadel. AX.25 packet radio gateways on these appliance computers behind the repeaters are very easy to implement, as the AX.25 Linux software is readily available and the computers have serial interfaces.

Good — but No Cigar
This did not solve our problem though, as we wanted our database server remote from the repeater. The repeater itself stubbornly resisted attempts to allow native one-to-many connections between ID-1s. We think this was to reduce broadcast type traffic on the radio link, which is simplex — this would waste bandwidth. Max and Kelly Black decided to use the destination NAT feature of Linux- the DNAT command. So each ID-1 user connected to the Linux box, and the database system came in as well from an ID-1 to the repeater. The repeater and ID-1s do not seem to track relationships between IP addresses and call signs, so the users could go up to the repeater, and the Linux machine could establish a call sign tunnel using another IP address block back to the database server, which could be remote.

This was tested and solved one major problem. We could also then allow our served agencies to set up ID-1 “data uplinks” to our repeaters from their offices or trailers/vans. The second problem was geographic. The finish line at the base of the State Capitol in St Paul, was in a low-lying area. The location of the Net 2 van was on a reverse slope of a hill a few miles away. We passed the hat and bought another repeater for Minneapolis, but a few weeks before the race we were urged to perform live radio path testing from our sites. No luck — the hills were in the way. Unlike 2 meter packet, L-band propagation is unforgiving. More team members bought more radios, and we got a third and then a fourth repeater. We called in some markers and these were installed in a round-the-clock effort the week before the race on a series of building rooftop sites in downtown Minneapolis. The Thursday before race weekend, we confirmed we had solid RF paths between
our repeaters, the net control location and the finish line site.

D-STAR Takes the Heat
Race day was marked by hot and muggy weather and a record volume of runners dropping out and needing medical attention and/or transportation. Net 2 (miles 19-22.5) was live to D-STAR from their van out on the course, and on race day we had five D-STAR L-band data repeaters online to support the event. Despite the data volume, the system worked perfectly with no issues. In 2008, with the infrastructure now in place, we plan to focus on linking the repeaters via radio and on development of a system to allow better integration of runner information as requested by the physicians in the medical tent. This reinforces our role, clearly stated in the FCC Part 97 Rules, of advancing the state of the radio art and providing trained experts in modern emergency communications.

Topic: 1258 Message: 1258

I have had a partial hard drive failure on my home computer. I am in the process of salvaging what I can. (a Total failure might have been easier).

Mostly I lost my applications, but that means a lot of stuff is not working as it should, including my usual email client.

I am living off of web mail at the moment and have dislocated my right leg from kicking my self in the hind end for only backing up "my documents".

So if I do not respond to you, it is because I have my computer apart scattered around the floor of my ham room.

Wondering just how I managed to survive before computers and the internet in Greenwood, Indiana.....

Yep,
I have kept a copy of the Indiana and the Kentucky scanner laws in my glove compartment for the past 5 or 6 years. It hasn't come up, but I figure it may help explain my radios if I get pulled over, depending on the individual policeman involved of course...

I ventured to Mt. Nebo (north of Brown County) last Saturday for Microwave Activity Day. Worked K4EFD near Louisville on 1296 and 2304 MHz and worked KB0PE near St. Louis on 1296 and 5760 MHz. I was wondering if any of the officials would come around but no one bothered me. I was right along Indiana state route 252.

None of the equipment I had could receive anything but ham bands (28 and 144 MHz SSB/CW IF rigs) but a policeman isn't going to know that. Now I'll carry a copy of that in my glove compartment, too! Thanks!

1267. 146.760 Marion County Emergency Repeater OFF THE AIR: 146.700 is now the back-up

Yahoo group: IndyHamRadio
Date: 2008-03-08 01:26:19 UTC
From: Mike Palmer
Topic: 1267 Message: 1267

The 146.760 repeater's antenna came loose today and the repeater was taken off-line in order to protect it. The 146.760 is the Marion County Emergency Repeater.

With that, the Indianapolis Repeater Association has offered up the 146.700 Repeater as the back-up repeater until such time the 146.760 antenna can be repaired.

All Skywarn Emergency Net traffic will now be on the 146.700, as well as any other County Emergency Traffic.

Another notice will go out after the repairs have been made canceling this action.

1272. W9SU Selling Indianapolis Business on eBay

Yahoo group: IndyHamRadio
Date: 2008-03-08 23:03:07 UTC
From: Mark Thompson
Topic: 1272 Message: 1272

Amateur Radio NewslineT Report 1595 - March 7, 2008

Amateur Radio Newsline report number 1595 with a release date of
Friday, March 7th, 2008

**

THAT FINAL ITEM: LIGHTNING AND ICE FOR SALE

And finally this week, a company that hams and broadcasters have come to rely on for lightning protection devices is up for sale. Its up for sale on eBay. The company is Industrial Communication Engineers. Its located in Indianapolis, Indiana here in the U-S-A and that's where you will also find Amateur Radio Newsline's Jack Parker, W8ISH:

--

Better up that limit on your Pay Pal account. This business opportunity could cost you a pretty penny. Long time amateur radio operator Mike Koss W9SU is hanging up his test leads and putting his company on the eBay auction block. Going price is a cool 2-point-7 million dollars. Koss has spent the past 18 years building up his electronic products business. So why auction the business on eBay?

Koss: "eBay is one way you can advertise anything including a business. And it can be seen by the entire world. The total cost of the ad on eBay was 14-dollars".

This may be the first time an electronics manufacturer has been auctioned on eBay. For 2-point-seven-mil, Koss says you get a large product and parts inventory, circuit designs, established customer base, 800 number and two new patents for electro-magnetic pulse and nuclear electro-pulse arrestors that have not yet been marketed.

So if lightning strikes and he gets an offer, what is this 40 year veteran of amateur radio going to do now?
Koss: "Becoming somewhat of a semi-professional DXer has always been kind of a keen interest. Ah, go back and sort of be a kid again",
Mike's world class ham radio station includes six tall towers that make great lightning rods. Its all protected by his patented lightning protection equipment. It's that ham station that Koss would like to spend more time operating. He says the stress of running a business and getting gray hair lead to his decision to auction the business on eBay and enjoy retirement.

Koss: "I'll probably travel a little bit because I haven't done very much of that in my lifetime and I'd like to write a book".

Koss says the book would detail the finite science of tower
installation, lightning protection and proper grounding techniques.
It could be a golden idea that earns him enough pocket change to enjoy
the best of amateur radio and his well earned retirement.

From: Robert Griggs
Topic: 1275 Message: 1275
Attachments: 1 described; binary payloads are missing from this source WARC

All:

Free Storm Spotter Training. The sponsors for this year's training are the Henry County Amateur Radio Emergency Services and the Henry County Sheriff's Reserve Unit. I would like to thank Sergeant Goodwin for hosting the training location. This will be at their monthly training. The training will be held at the Justice Center Training room/EOC at 1215 Race in the Basement across from dispatch on Saturday, March 15th at 7:00 PM. I would like to encourage all available Dispatchers, Sheriff's Deputy's, Police Officer's, EMS personnel, Fire Department personnel, Amateur Radio operators, and the Public to attend this vital training. Hope to see everyone at the training.

View/Print The NWS Spotter Information HYPERLINK "http://www.crh.noaa.gov/images/ind/spotter%20information4%20panel_bw.pdf" \nBrochure .

Frequently asked questions about spotter sessions:

1. Do I need to preregister for these sessions? No. All you need to do is arrive at the proper time and location.

2. About how long do the sessions last? Approximately 2 hours.

3. Do I have to live / be a spotter in the county that I take the training session? No. The training sessions are identical.

1276. Ham Radio in new The Bank Job Movie

Yahoo group: IndyHamRadio
Date: 2008-03-09 18:24:51 UTC
From: Mark Thompson
Topic: 1276 Message: 1276

I saw the new movie The Bank Job last night.

http://www.thebankjobmovie.com/

It is apparently based on a true story that occurred in the early 1970s in England.

Ham radio is prominent in the movie. A London ham operator uses a 1970s vintage Yaesu FT-101
to intercept some apparent bank robbers using CB-type walkie-talkies.

Sent: Monday, March 10, 2008 6:19:53 AM
Subject: AM Jambo

ATTENTION ALL VINTAGE HAM RADIO ENTHUSIASTS

AND ESPECIALLY

THE MIDWEST CLASSIC RADIO NET PARTICIPANTS

In recognition of the AM Jamboree as was initiated and hosted by Ron (K5HZ) and
Julie that was held for a number of years in south-central Wisconsin and
also recognizing that many AM'ers, in the Illinois, Wisconsin, Indiana and Iowa area
have expressed an interest in wanting to participate in such a social event such as the AM
Jamboree,

We are very happy to announce the Midwest Classic Radio Ham-boree

To be held on
Saturday June 28, 2008
8:00 am

at beautiful
Siems Memorial Park
In Union, Illinois

(Union Illinois is the home of the famous Illinois Railway Museum and
is located only 15 miles from the Wisconsin State line and approximately 100 miles from
Iowa and Indiana)

Scheduled
(further information forthcoming)

Free Swap-meet of vintage ham gear
Bring your own table

Free auction of vintage ham gear
Seller final-say protection

Catered lunch featuring Italian Beef and Sausage

Pavilion shelter with picnic tables

Raffle or bingo-type "Radio" game

-and-

SPECIAL PRESENTATION

This very first Ham-boree will be in honor of, and dedicated to the recognition of, the 13 years of unselfish service as net-control operator of the Midwest Classic Radio Net faithfully provided by Robert Hummel (WA9ZTY)

Please do not pass the presentation information to Rob as we want to keep it a surprise to him

1279. Re: [IndyHamRadio] 146.760 Marion County Emergency Repeater OFF THE AIR: 146.700 is now the back-up

Yahoo group: IndyHamRadio
Date: 2008-03-11 02:33:04 UTC
From: Kevin Carter
Topic: 1267 Message: 1279

Hi Mike,
Can you please change my email address from wizemt20@... to wizemt20@...

Thanks,
Kevin Carter
KB9AMU

Mike Palmer <N9FEB@...> wrote:
The 146.760 repeater's antenna came loose today and the repeater was
taken off-line in order to protect it. The 146.760 is the Marion
County Emergency Repeater.

With that, the Indianapolis Repeater Association has offered up the
146.700 Repeater as the back-up repeater until such time the 146.760
antenna can be repaired.

All Skywarn Emergency Net traffic will now be on the 146.700, as well
as any other County Emergency Traffic.

Another notice will go out after the repairs have been made canceling
this action.

From: Mark Thompson
Topic: 1280 Message: 1280

Spirit of Knoxville IV balloon launches Tuesday 11th March

Spirit of Knoxville IV (SNOX IV) launch date has been set at 0300 UT on Tuesday 11th March. The balloon with carry a RTTY LSB/CW beacon on 10.126 MHz.

This flight is designed to stay aloft for more than 24 hours, inserted into the current jet stream at normal flight altitudes of 30,000 to 40,000 ft. This will take the balloon into Europe over the UK and France if all goes well around 40 hours into the flight.

Launch Time: 0300 UTC March 11 (10 PM EDT March 10) Track the mission live at: http://www.spiritofknoxville.com (the Live status page will only become active at launch)

Keep an eye on the latest progress from the launch team on the front page of spiritofknoxville.com or by using twitter to follow twitter user "spiritofknox".

Radio listeners: Flight radio details will be available on the DTRC status page which opens when you run the current version of DTRC.

Download DTRC from http://dtrc.utarc.org

Thanks,

Spirit of Knoxville Crew

Mike-

I use Outpost Packet Message Manager (http://www.outpostpm.org/) riding on top of AGWPE which is a program that converts your sound card into a TNC. AGWPE is included with the Outpost download.

So, all you need is Outpost and a rig to soundcard interface like Rascal, Tigertronics, RigBlaster, MicroHam, etc.

Hi David

Great ideas!

I bought a SignaLink USB about a year ago and it has been the best rig to PC interface I have owned.

From the Website: http://www.tigertronics.com/slusbmain.htm

All sound card Digital and voice modes are supported by the SignaLinkTM USB. This includes traditional modes such as RTTY, SSTV and CW (to name a few), as well as today's hottest new modes like PSK31, MT-63 and EchoLink®. Performance on all modes has been optimized by the use of special low-noise parts and careful design techniques, while ease of operation is provided by front panel controls that let you adjust your Transmit Audio, Receive Audio and Transmit delay "on the fly".

Although I have never used it for Packet Radio.

Mike

Dave has a good setup with outpost and AGWPE. I prefer
the packet engine-pro $49 registered, it has several
features over the free version including tcpip over
radio.
For APRS they also have AGW tracker $49 (registerd
version) it makes a great interface for several types
of mapping software.

I'm beta testing RMS Packet and PaclinkMP with te
AWGPE-Pro I'll let you know it works out.

1296. D-STAR Presentation at Goshen Club Meeting on April 8th @ 7 pm

Yahoo group: IndyHamRadio
Date: 2008-03-26 15:32:35 UTC
From: Mark Thompson
Topic: 1296 Message: 1296
Attachments: 1 described; binary payloads are missing from this source WARC

The April 8th meeting of the Goshen Amatuer Radio Club (GARC) will feature an Overview & Introduction to D-STAR presented by Mark, WB9QZB.

D-STAR is an open protocol developed by the JARL and supports both Digital Voice & Data on 2m, 70cm & 23cm. D-STAR repeaters can be connected
to the internet via a gateway PC. Icom & others currently make products for D-STAR.

The meeting & presentation are open to all interested amateurs.

GARC meets on the second Tuesday of each month at 7 pm in Goshen, IN at the Homan Building (Activities Center on the Greencroft campus).
The GARC club house is located on the south side of Goshen, east of state road 15 or west of US 33 on collage ave.
Go to the enterance of Greencroft Retirement Center which is across from the save-a-lot grocery store.
Turn and go south to the stop sign and turn right going around the circle drive to second street turn right and
as you make the 2nd right hand turn you will see our 150 foot tower on the right. The club house is located to
the south side of the tower in the Homan Activities Building. Main entrance to club house is on the east end of Homan Activities Building,
name is on the glass of door.

Look forward to seeing you at the meeting.

More information about GARC is available at:

http://www.goshenarc.org/

More information about the digital modes is available at:

http://groups.yahoo.com/group/illinoisdigitalham/

Hi Bob, et all,

Apparently I had a computer glitch that didn't include the e-mail forward. Here is what was being sent to this mailing list.
James /K9APR

<fwd>
IndianaWeatherOnline.com Severe Weather/Flood Alert
Issued: March 27th, 2008 at 7:00 PM by Brandon Redmond

A stormy spring pattern is taking shape across the Ohio Valley. Heavy rain is likely tonight and some isolated strong thunderstorms are not out of the question. An inch to an inch and a half will be possible by tomorrow morning. This will only aggrivate the flooding situation and some additional minor flooding problems will be possible.

As colder air filters into the area by tomorrow morning, some sleet and light snow showers could mix in with any light rain that is still lingering across the area.

The main reason for this email though is to alert you all to the growing ominous potential for a sizeable severe weather outbreak and the possibility of a looming major flood event. Rain will be possible by Sunday Evening and will continue into Monday and Tuesday. As a strong low pressure system ejects Northeast into the Upper Ohio Valley, an episode of severe weather will be possible on Monday Night and into early Tuesday.

As much as three inches of rain could fall between Sunday and Tuesday and isolated higher amounts will be likely. In fact, our latest forecast guidance indicates the possibility of well over 5 inches of rain across a large portion of Indiana and Western Ohio.

Finally, one last note. The IndianaWeatherOnline.com 2008 Spring Outlook is online and you can view it by going to our blog at www.IndianaWeatherOnline.com <http://www.indianaweatheronline.com/>

For the latest weather information, please visit www.IndianaWeatherOnline.com <http://www.indianaweatheronline.com/> and www.LetsTalkWeather.net <http://www.letstalkweather.net/>

Well Ben, not everyone on the list will subscribe to the list. So that is why the forwards happen. If the group moderator tells me to stop sending to this list then I will. Whats with the attitude anyway? Does anyone else feel the way Ben does?

(Sigh, What is happening to amateur radio anyway??? Take a deep breath Mike.)

Now Ben,

Isn't that like saying "Those sirens are way too loud --- if we wanted that information, we would have a weather radio"???

As I recall, amateur radios very core is based on the ability to react to emergencies and provide communications when needed. How wonderful it is, that the amateurs in central Indiana are included in the distribution of the information this far in advance of potential storms and flooding. Personally, I feel that these types of messages are exactly what SHOULD be distributed on EVERY amateur radio listserve and forum.

Your reaction to the distribution of this message has fired me up. Hopefully, you will/are sign/ed up in order to receive the info about these potentially dangerous storms and are prepared to help out as needed!

Too bad that I'll be in the Smoky Mountains all of next week. A nice spring time thunderstorm would be kinda nice! I'll probably be rockin' and rollin' in the RV as the storms come through down there.

Mike Wolford (N5CEC)

I can understand (but don't agree with) your argument. It's more like
setting the SAME code on my radio so that I don't get tones for
counties 30 miles east of me -- the ability to be more selective about
what information you receive.

> Your reaction to the distribution of this message has fired me up.
> Hopefully, you will/are sign/ed up in order to receive the info about these

>
I actually don't plan on signing up. I have a degree in meteorology,
and my own preferred methods of obtaining weather information.
Obviously, I'm in a very small minority in that regards. But there
are other people who may not want to receive the postings for one
reason or another. Why not give everyone the option? I encourage
people who want to receive the notices to sign up for the
IndianaWeather mailing list, but I don't think we should be
duplicating the traffic on this list. It wasn't my intention to fire
you up, and I'm certainly not out to cause trouble. If most people
disagree with me, that's fine, I've made my opinion known and I'll let
the list decide where to go from here.

Due to some fortunate timing, I was in the Smokies during a
thunderstorm a few springs ago, except I was in a tent. Boy, what a
night that was. :-) Enjoy the trip!

James and the Group I have 2 Repeaters in N/W Indiana 444.750 and 224.740 Pl 131.8 . I have a NWS Receiver that Rebroadcast the National Weather Service Emergency Warnings and AMBER Alerts of Kidnapped Children , I have had two Hams ask Me to Turn that off after Midnight because it Might wake them up When Sleeping .

I have had people call Me at 3 in the morning and ask if I was monitoring the Conversation on the repeater They did not like the content of the Conversation of 2 truck driver Hams in the area . I said why are You setting there listening just Turn the radio off and go back to Bed Goodnight , So no matter how good Our intent to help and inform it is impossible to make Everyone Happy .

73 De Don KA9QJG

I will Probably get hollered at for this Post too , I just use the Delete key or Change Freq .
And since I am taking up bandwidth if Anyone on the Group is in the area Please Feel Free to use the Repeaters as much and often as You want No dues No Club just a little Common sense the Repeaters will never get Shut off because of the content of Your QSO Within reason

You know Don, I have heard this story more then once in the amateur radio community!!! It is sad that people have become careless in the result of being prepared for a disaster. Emergency preparedness should be the first and foremost. That is why I send the e-mails so you and everyone else can be prepared for what could happen. I work in the world of EMA's so I understand preparedness. As far as the alerts on the repeaters, I say leave them on....

Topic: 1297 Message: 1312

IndyHamRadio Members,

David, KC9MHB, has a point here. I find it interesting that issues of relative insignificance often generate many more comments than an issue with wide ranging consequences.

I have been following the conversation with interest. While it appears that the "dust may have settled" on this topic, as Moderator/Owner, I feel compelled to comment. I recognize some points I consider valid:

* This group is described on the home page as, "The Indy Ham Radio Group is dedicated to the exchange of information of interest to licensed amateur Radio operators of Indiana. This may be news, information, VE testing, club meetings, activities, training classes, weather spotter training and Ham Radio equipment to buy, sell or trade by private individuals. No commercial listings, please. Please limit your postings to items of local interest. (There are plenty of other platforms for discussion of national concerns.)"

* Ham radio is a hobby; a hobby with a great number of specialized interests ranging from the very serious (Emergency Response) to the very mundane (rag chewing over nothing). All parts are equally valid parts of the hobby.

* One person's "information of interest" can be another person's "spam".

* In a general interest group like this, there will be postings that are not of interest to every member. I hope it is a sort of "all you can eat buffet" where members can see lots of aspects of the hobby and can sample new "foods" from time to time. This is especially important to those new to the hobby. (I was first licensed in 1979; I am STILL sampling parts of the hobby I have never tried before.)

* The line where "samples" start to become "staples" is a gray area, requiring judgment on our part. Clearly, if every post from another group is reposted here, that would no longer be a "sample". Likewise, banning any particular branch of the hobby serves no useful purpose.

* I would ask that we all try to keep the group a potpourri of samples of various aspects of the hobby with links or connections to where members can get more. Variety is good. Diversity is good.

* If the topics brought to the group become dominated by any one particular part of the hobby, I encourage any member to speak up and point it out. Likewise we should not discourage any particular part of the hobby, just because we individually are not interested in it.

I believe this exchange of viewpoints has been a healthy one. I am very pleased that no one let it degenerate to personal attacks. I believe I have made this sufficiently lengthy and boring that no one will read it.

73,

Don, W9DEW

To those points, Don, anyone with an interest in severe weather that might be approaching their area can check the Convective Outlooks issued by the NWS Storm Prediction Center at:

http://www.spc.noaa.gov/products/outlook/

The Convective Outlooks give a national view of what the Storm Prediction Center is looking at for today, the next day, and the next day.

Also, most NWS offices in this area issue a Hazardous Weather Outlook every morning. These HWOs talk about the potential for severe weather that day and the next in that office's County Warning Area and usually include a "Spotter Activation Statement" at the end of the outlook. I check the HWO just about every morning so get an idea of severe weather that might affect my day.

Here are links to the Hazardous Weather Outlooks for:

Indianapolis
http://www.crh.noaa.gov/product.php?site=ind&product=HWO&issuedby=ind

North Webster
http://www.crh.noaa.gov/product.php?site=iwx&product=HWO&issuedby=iwx

Chicago http://www.crh.noaa.gov/product.php?site=lot&product=HWO&issuedby=lot

Paducah http://www.crh.noaa.gov/product.php?site=pah&product=HWO&issuedby=pah

Louisville
http://www.crh.noaa.gov/product.php?site=lmk&product=HWO&issuedby=lmk

Wilmington, Ohio http://www.erh.noaa.gov/iln/afos/CLEHWOILN

Hopefully, if you've attended an NWS "spotter talk" recently, the presenter has talked about how to read and interpret Convective Outlooks and Hazardous Weather Outlooks. If not, I may be able to answer questions about them.

Also, most of the NWS offices in the Central Region maintain a Severe Weather Summary Page that gives you a quick summary of what's going

on in their County Warning Area. I'll not post all of the links, but here is the link for Indianapolis:

http://www.crh.noaa.gov/hazards/ind

You can substitute IWX, LOT, PAH, or LMK in that URL for other offices, except Wilmington, that cover Indiana.

Bob...

Hi Bob,

Thanks for the links. If you would like to post them and any others in the "links" section, of this site, that would be great. We already have a folder for Weather Spotter links; you can just add these to the others.

I personally enjoy weather spotting and took the Advanced Class a few years back at South Bend. I probably should go again for a refresher.

Weather spotting is one of the things that attracted me to the hobby initially. April 11, 1965, I lost some high school classmates and neighbors in the Lebanon to Sheridan area to that tornado outbreak. I have had a keen interest in severe weather ever since then.

Thank you for sharing this information.

73,

Don, W9DEW

To those points, Don, anyone with an interest in severe weather that might be approaching their area can check the Convective Outlooks issued by the NWS Storm Prediction Center at:

http://www.spc. <http://www.spc.noaa.gov/products/outlook/>
noaa.gov/products/outlook/

The Convective Outlooks give a national view of what the Storm Prediction Center is looking at for today, the next day, and the next day.

Also, most NWS offices in this area issue a Hazardous Weather Outlook every morning. These HWOs talk about the potential for severe weather that day and the next in that office's County Warning Area and

usually include a "Spotter Activation Statement" at the end of the outlook. I check the HWO just about every morning so get an idea of severe weather that might affect my day.

Here are links to the Hazardous Weather Outlooks for:

Indianapolis
http://www.crh.
<http://www.crh.noaa.gov/product.php?site=ind&product=HWO&issuedby=ind>
noaa.gov/product.php?site=ind&product=HWO&issuedby=ind

North Webster
http://www.crh.
<http://www.crh.noaa.gov/product.php?site=iwx&product=HWO&issuedby=iwx>
noaa.gov/product.php?site=iwx&product=HWO&issuedby=iwx

Chicago http://www.crh.
<http://www.crh.noaa.gov/product.php?site=lot&product=HWO&issuedby=lot>
noaa.gov/product.php?site=lot&product=HWO&issuedby=lot

Paducah http://www.crh.
<http://www.crh.noaa.gov/product.php?site=pah&product=HWO&issuedby=pah>
noaa.gov/product.php?site=pah&product=HWO&issuedby=pah

Louisville
http://www.crh.
<http://www.crh.noaa.gov/product.php?site=lmk&product=HWO&issuedby=lmk>
noaa.gov/product.php?site=lmk&product=HWO&issuedby=lmk

Wilmington, Ohio http://www.erh.
<http://www.erh.noaa.gov/iln/afos/CLEHWOILN> noaa.gov/iln/afos/CLEHWOILN

Hopefully, if you've attended an NWS "spotter talk" recently, the presenter has talked about how to read and interpret Convective Outlooks and Hazardous Weather Outlooks. If not, I may be able to answer questions about them.

Also, most of the NWS offices in the Central Region maintain a Severe Weather Summary Page that gives you a quick summary of what's going on in their County Warning Area. I'll not post all of the links, but here is the link for Indianapolis:

http://www.crh. <http://www.crh.noaa.gov/hazards/ind> noaa.gov/hazards/ind

You can substitute IWX, LOT, PAH, or LMK in that URL for other offices, except Wilmington, that cover Indiana.

Ya know Bob and Don....if I don't spot some GOOD weather here pretty soon, I'm liable to lose my mind.

This has been the longest winter/cold spell I can remember....but then again, my memory, like my supply of homebrew beef jerky, is short.

Can you guys talk to the weather man and ask him, no...BEG him, for a fresh batch of summertime bicycle riding, QRP camping, and afternoon fishin weather?

I sure would appreciate it.

Good to see you at the hamfest Don, I swear you got taller...maybe I'm shrinking.

1316. New approach to emergency preparedness.

Yahoo group: IndyHamRadio

From: Walter A. Breining
Topic: 1316 Message: 1316

New approach to emergency preparedness.

FEMA and the Emergency Management Agency have initiated a new concept for Emergency Preparedness.

In the late 1980s and early 1990s, American industry introduced a new manufacturing concept called "Just in Time Freight" The Just in Time Freight concept provides for assembly line parts to arrive just in time for use eliminating the need for manufactures to warehouse parts for assembly.

"Just In Time Emergency Preparedness" (JIT-EP) is a new concept that will save the taxpayers thousands of dollars. JIT-EP is similar to the shipping concept "Just in Time Freight".

With JIT-EP emergency preparedness starts when there actually is an emergency. This new concept boasts the following advantages over continually maintaining a state of readiness.

1. It is much easier to prepare for an emergency when an actual emergency begins because much more will be known about the scope and type of emergency that is being prepared for and efforts can be more precisely focused.
2. Considerable savings can be enjoyed. The cost of maintaining resources and training costs can be eliminated during times when there is no emergency.
3. Local EMA (Emergency Management Agency) offices and EOCs (Emergency Operation Centers) can be eliminated and replaced with a P.O. Box. This eliminates the expense of maintaining these facilities with unsightly antennas.

The P.O. Box is used to collect Federal and State funding. These funds are placed in a "holding account" for a period of 90 days. If after 90 days these funds are not used because there has been no emergency, they can re directed to more important projects such as arts parks or bicycle trails so these funds will actually be of benefit to the community.

You will be hearing more about JIT-EP in the near future.

Prepare to Get Prepared.

It sounds like the same plan they had at Hurricane
Katrina and 9/11.

Sounds more like a JIP-EP

We need to learn from the mistakes of the past not
re-create them.

1320. Spring VHF/UHF Sprints, Monday, April 7 @ 7 - 11 pm

Yahoo group: IndyHamRadio
Date: 2008-04-04 17:48:57 UTC
From: Mark Thompson
Topic: 1320 Message: 1320

http://www.sysadnet.com/vhfsprintrules.htm

2008 Spring VHF/UHF Sprints
Sponsored by
John Kalenowsky, K9JK, and Steve Gilmore, W4SHG
John Kalenowsky, K9JK, and Steve Gilmore, W4SHG, with support from Ham Radio Outlet of Virginia, are pleased to announce the 2008 Spring VHF/UHF Sprints. Everyone is encouraged to participate, even if only in a small way. The rules have intentionally remained simple, and the contest's focus continues to be for single operator, single transmitter entries, both "fixed" and "rover". Again we will have for 2008, the "Rookie" classification, to recognize 'first-time' participants, from their own stations OR as "guest-op" at an "experienced" station to introduce newcomers to weak signal vhf/uhf operations and, hopefully, encourage their participation in the future. Guidance from an experienced operator for a "Rookie" is permitted as long as entries in this class are clearly identified by comments in the SOAPBOX: lines for Cabrillo formatted logs or on the Summary Sheet for paper logs. The detail should identify who is the "Rookie" and list any "experienced" operator(s) who were
present.
Please note that, for 2008, we still have the shortened submission date window and STRONGLY encouraging electronic log submissions using the Cabrillo format, but we will continue to accept paper logs (though the shorter deadline will apply to paper log submissions as well). A summary Sheet which includes your total contacts, multipliers and calculated score WILL BE required with Paper Logs (see sample at:
http://www.sysadnet.com/vhfsprintsummary.pdf). Such summary info is not required for electronic logs but may be included in the SOAPBOX: area of the Cabrillo formatted log if participants so desire. Be sure to include the grid square you operated from in either your log or summary sheet.
Please take a look at the sponsors for this year's events at
http://www.sysadnet.com/springsprintsponsors-2008.htm. Several sponsorship opportunities are still available. If interested in becoming a prize sponsor or sponsoring a plaque for the events in 2008 (or in the future), please email us at springsprintquestions@...
** Log submissions for 2008 may be viewed here. **
** Awards for 2007 may be viewed here. The complete scores database for 2007 can be viewed here.

We wish you the very best of VHF! 73,
John Kalenowsky, K9JK, and Steve Gilmore, W4SHG

---

1. Object: To work as many amateur stations in as many 2 degree by 1 degree grid squares as possible, using authorized amateur frequencies on the 50, 144, 222, 432, 902 MHz and above bands.
2. Contest Period:
2.1. - 144 MHz
The 144 MHz Sprint will be from 7 PM until 11 PM local time on Monday, April 7, 2008.

2.2. - 222 MHz
The 222 MHz Sprint will be from 7 PM until 11 PM local time on Tuesday, April 15, 2008.
2.3. - 432 MHz
The 432 MHz Sprint will be from 7 PM until 11 PM local time on Wednesday, April 23, 2008.
2.4. - Microwave (902+)
The Microwave Sprint will be on Saturday, May 3, 2008, from 6 AM until 1 PM local time. This includes all Amateur frequencies above 902 MHz. Please include band data in summaries and logs. NOTE: use of Liaison Frequency is encouraged.
2.5. - 50 MHz
The 50 MHz Sprint will be from 2300Z Saturday, May 10, until 0300Z Sunday, May 11, 2008.
3. Exchange: Grid-square locator - PLEASE EXCHANGE and LOG SIX-Character Grid Locators where possible. Correct exchange of FOUR-Character Grid Locator is the minimum requirement for a valid contact but we'd REALLY like to see SIX-Character locators exchanged and recorded in the submitted logs.

What's that, you say you have no clue what your SIX-Character Grid Locator is? To assist you with that, please try the following...
Enter your FOUR-Character Grid Locator here: [input] [input]
When you click the "Show me my Grid Square!" Button, you will be presented with a Google Map showing the borders of the 2-degree by 1-degree FOUR-character Grid Square that you entered. You can then navigate as well as Zoom in and out using the controls at the upper left of the screen. When you click a point on the map, however, the Latitude and Longitude of that point ALONG WITH THE SIX-Character Grid Locator for that point will pop up in a text balloon and the border of the SIX-Character Grid Locator will be shown. This is provided as a service to the Amateur Radio Community by Laurent/Larry Haas, F6FVY, using the Google Maps API. Thanks to Larry and Google! Try it, we think you'll like it!
4. Scoring:
4.1. QSO Points: Count one point for each complete QSO.
4.2. Multipliers: The total number of different FOUR-Character Grid Squares worked. Each FOUR-Character Grid Locator represents a 2 degree by 1 degree area on the earth's surface, the SIX-character designators are just sub-divisions of that. So, to be clear, if you work a station in EN53bj and another in EN53we, that is only ONE Multiplier, EN53.
4.3. Final score: Multiply QSO points by multipliers. Each Sprint is scored separately.
4.4. Rovers use same QSO Point and Multiplier criteria but scoring for Rovers is cumulative, total # of multipliers worked from each grid activated multiplied by total # of complete QSOs from each grid activated. Segregation of rover logs by grid activated is no longer required as long as the log makes it clear from which FOUR-Character grid locator each contact was made.
Example: Scores from EM98 5 qso's , 3 grids / EM99 10 qso's, 4 grids / EM89 3 qso's, 2 grids.
Total score would be 18 qso's x 9 grids = 162 points
4.5. Microwave Sprint scoring is cumulative, total # of grids worked from each band activated multiplied by total # of stations worked in each band activated.
5. Reporting: Logs (Cabrillo format preferred) must be received via e-mail or paper logs WITH summary sheet postmarked no later than following deadlines (roughly two weeks after the close of each event):
5.1. - 144 MHz - April 23, 2008
5.2. - 222 MHz ? May 1, 2008
5.3. - 432 MHz - May 9, 2008
5.4. - Microwave (902+) - May 19, 2008

5.5. - 50 MHz - May 27, 2008
6. Awards:
6.1. Certificates/Plaques (if sponsored) will be awarded as follows:
6.1.1. TOP FIVE individual scores for each of the five Sprint "band" events (Single-Op Fixed, Rover and Rookie will be considered for this ranking).
6.1.2. TOP FIVE cumulative Single-Op Fixed scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.3. TOP FIVE cumulative Rover scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.4. TOP FIVE cumulative Rookie scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.5. If a plaque is not sponsored for a particular finish above, a certificate (similar to what other VHF Contest sponsors provide) will be sent. "Specialty" plaques will also be considered (such as for best finish in a region) if anyone wants to sponsor such (and can provide a clear criteria). Please contact John or Steve regarding that. To view what plaques have been sponsored (and criteria) for 2008, click here.
6.2. Prizes: As they are sponsored, prizes will be awarded based on criteria of the sponsor. As an example, the simplest criteria will be "random drawing from all logs received." To view what prizes have been sponsored (and criteria) for 2008, click here.
7. Submission of Logs:
7.1. By submitting a log, participants confirm that they have observed all contest rules, as well as all regulations established for amateur radio in their country and that their log submission is true and accurate to the best of their knowledge. Participants further agree to be bound by the decisions of the Spring Sprint sponsors.
7.2. Electronic Logs:
7.2.1. The "Cabrillo" log format is now the standard for the Spring Sprints.
7.2.1.1. Use the following names for the Cabrillo "CONTEST:" field:
For 144 MHz, use CONTEST: VHF-SPRINT-144MHZ-SPRING
For 222 MHz, use CONTEST: VHF-SPRINT-222MHZ-SPRING
For 432 MHz, use CONTEST: VHF-SPRINT-432MHZ-SPRING
For "Microwave" (902 MHz & Up), use CONTEST: VHF-SPRINT-MICROWAVE-SPRING
For 50 MHz, use CONTEST: VHF-SPRINT-50MHZ-SPRING
7.2.1.2. Until logging programs with 'official' support for these events become more available, the closest format is probably for the June or September ARRL VHF QSO Parties (as long as the logging program knows how to handle SIX-Character Grid Square input and can properly 'ignore' the 5th and 6th characters for Multiplier counting). It may be necessary to manually edit the "CONTEST:" line in the file and Claimed Score may be incorrect for bands 222 MHz and above but the QSO data should be correct.
7.2.1.3. E-mail logs to: springvhfsprints@... preferably using a "Plain Text" e-mail format, with ONLY "your call" and the "band" in the subject line (W4SHG 144 -or- K9JK MICROWAVE for example) and with the log file as an attachment named "<your call>.LOG" (e.g. W4SHG.LOG)
7.2.2. "Web-to-Cabrillo": Bruce Horn, WA7BNM, has graciously agreed to provide 'web forms' to facilitate generation and AUTOMATIC SUBMISSION of Cabrillo-formatted logs for the Spring VHF & Up Sprints at the http://b4h.net/cabforms web site that he maintains. You may have to scroll down the homepage a bit to the "Other Contests" area to find the ones for the Spring VHF Sprints and they may not be there until just before the actual contests. PLEASE consider using these to generate and submit electronically instead of submitting a paper log. Our thanks to Bruce!
7.3. Paper logs:

7.3.1. Paper logs must include a Summary Sheet and the log sheets themselves should include the following information:
Band (in MHz, e.g. 50, 144, 222, 432, 902. For above 902, change to GHz, e.g. 1.2, 2.3, 3.4, etc.)
Mode (e.g. CW, PH, DIG)
Date/Time (PLEASE indicate whether the dates & times are "local" or UTC)
Callsign SENT (can be listed at the top of a page OR on each line)
Grid Locator SENT (PLEASE give your SIX-character locator when known)
Other Station's Callsign
Other Station's Grid Locator (PLEASE ask for and record SIX-character when the other station provides it)
7.3.2. "Snail Mail" paper logs to:

1326. D-STAR Presentation at Goshen Club Meeting on Tuesday, April 8th @ 7 pm

Yahoo group: IndyHamRadio
Date: 2008-04-06 21:13:00 UTC
From: Mark Thompson
Topic: 1326 Message: 1326

The Tuesday, April 8th meeting of the Goshen Amatuer Radio Club (GARC) will feature an Overview & Introduction to D-STAR presented by Mark, WB9QZB.

D-STAR is an open protocol developed by the JARL and supports both Digital Voice & Data on 2m, 70cm & 23cm. D-STAR repeaters can be connected
to the internet via a gateway PC. Icom & others currently make products for D-STAR.

The meeting & presentation are open to all interested amateurs.

GARC meets on the second Tuesday of each month at 7 pm in Goshen, IN at the Homan Building (Activities Center on the Greencroft campus).

The GARC club house is located on the south side of Goshen, east of state road 15 or west of US 33 on college ave. Go to the enterance of Greencroft Retirement Center which is across from the save-a-lot grocery store. Turn and go south to the stop sign and turn right going around the circle drive to second street turn right and as you make the 2nd right hand turn you will see our 150 foot tower on the right. The club house is located to the south side of the tower in the Homan Activities Building. Main entrance to club house is on the east end of Homan Activities Building, name is on the glass of door.

Look forward to seeing you at the meeting.

More information about GARC is available at:

http://www.goshenarc.org/

More information about the digital modes is available at:

http://groups.yahoo.com/group/illinoisdigitalham/

You rock. That's why Blockbuster's offering you one month of Blockbuster Total Access, No Cost.

1327. Zapping Cancer Cells at 13.56 MHz on 60 Minutes This Weekend

Yahoo group: IndyHamRadio
Date: 2008-04-10 19:07:30 UTC
From: Mark Thompson
Topic: 1327 Message: 1327

Zapping Cancer Cells at 13.56 MHz on 60 Minutes This Weekend (Apr 10, 2008) -- John Kanzius, K3TUP, of Erie Pennsylvania, has been working on an RF-based treatment for cancer that is currently undergoing testing. According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Kanzius is scheduled to be on the CBS news show 60 Minutes on Sunday, April 13 (keep in mind that the line-up could change). "While there never is a way to predict what shows and what ends up on the cutting room floor, John gave as many plugs to his ham radio background as he could in being the foundations of hands-on learning that led to his research and invention," Pitts said. Kanzius, a very active Amateur Radio operator, aided in the creation of the upcoming ARRL Technology and Amateur Radio public relations campaign. Read more about Kanzius and his ground-breaking idea to kill cancer cells with radio waves in the February 2008 issue of QST.

FCC ADOPTS RULES FOR DELIVERY OF COMMERCIAL MOBILE ALERTS
TO THE PUBLIC DURING EMERGENCIES

Washington, DC – The Federal Communications Commission (FCC) today adopted a First Report and Order (Order) that will support the ability of the nation’s wireless carriers to transmit
timely and accurate alerts, warnings and critical information to the cell phones and other

mobile
devices of consumers during disasters or other emergencies.
In compliance with the Warning, Alert and Response Network Act (WARN Act), today's Order adopts relevant technical requirements based on the recommendations of the Commercial
Mobile Service Alert Advisory Committee (CMSAAC) for the transmission of such emergency messages to the public.

During emergencies, Americans increasingly rely on wireless telecommunications services and devices to receive critical, time-sensitive information anywhere, anytime. Once fully implemented, the Commercial Mobile Alert System (CMAS) will help ensure that Americans who subscribe to participating wireless services receive emergency alerts when there is a disaster or
emergency that may impact their lives or well-being.

Wireless carriers that choose to participate in the CMAS will transmit text-based alerts to their subscribers. As technology evolves, the CMAS may eventually include audio and video services to transmit emergency alerts to the public. To ensure that people with disabilities who
subscribe to wireless services receive these emergency alerts, the FCC adopted rules that will
require wireless carriers who participate in the CMAS to transmit messages with both vibration
cadence and audio attention signals.

Consumers can expect to receive three types of messages via their cell phones and other mobile devices from participating wireless carriers, including:

· Presidential Alerts - national emergency-related alerts delivered to the American public that would preempt any other pending alerts;

· Imminent Threat Alerts - alerts with information on emergencies that may pose an imminent risk to people's lives or well-being; and

· Child Abduction Emergency/AMBER Alerts - alerts related to missing or endangered children due to an abduction or runaway situation.

-more-

Under the CMAS, subscribers to wireless services with roaming agreements will receive timely alerts, provided the subscriber's mobile device is configured for, and technically capable of,
receiving such emergency alerts from the network they are roaming on.
Participating wireless carriers will be required to comply with the rules adopted in the Order
today within 10 months from the date of announcement that a Federal agency has been designated
to collect and transmit the alerts to the wireless carriers.

Action by the Commission, April 9, 2008, by Commercial Mobile Alert Service First Report and Order (FCC 08-99). Chairman Martin, and Commissioners Copps, Adelstein, Tate and McDowell. Separate Statements issued by Chairman Martin, and Commissioners Copps, Adelstein,

Tate and McDowell. PS Docket No. 07-287.

Public Safety & Homeland Security Bureau (PSHSB) contact is Lisa Fowlkes, Deputy Bureau Chief, at (202) 418-7452.

-FCC-
News and other information about the Federal Communications Commission is available at www.fcc.gov.

THE COMMERCIAL MOBILE ALERT SYSTEM. Adopted rules necessary to enable Commercial Mobile Service alerting capability for Commercial Mobile Service providers who elect to transmit emergency alerts to their subscribers. Action by: The Commission. Adopted: 04/09/2008 by R&O. (FCC No. 08-99). PSHSB

1331. Talking Dog

Yahoo group: IndyHamRadio
Date: 2008-04-13 16:39:22 UTC
From: Don West
Topic: 1331 Message: 1331
Attachments: 2 described; binary payloads are missing from this source WARC

Yes, this is off topic. However, I do not come across many ham radio jokes. Let me know if you object.

73,

Don, W9DEW

During a recent Saturday afternoon drive around Orange County I happened down a back road down near the Santa Ana River. I saw a sign in front of a broken down aging farmhouse that read, "Talking Dog for Sale."

Well, that made me curious so I stopped to see what the deal was. In the yard there is a nice looking Labrador retriever sitting.

"You talk?" I asked.

"Yep," the Lab replies.

Well after I got over the shock of hearing a dog talk, I asked "So, what's your story?"

"Ah shucks there ain't much to tell. Say, is that a screwdriver antenna on your truck out there?"

"How on earth did you know that," I asked?

The Lab looks up and says, "Well, I'm a ham radio operator. I got my ticket when I was a young pup. In no time at all I had my 5-band DXCC in Phone and CW. The CIA heard about me and asked me to do spy work for them. I would hang around the communications centers, and with my keen hearing I could copy the transmissions. Because no one ever figured a dog would be eavesdropping, I was one of their most valuable spies for eight years. Copying high speed CW all day really tired me and I knew I wasn't getting any younger. So, I decided to settle down.

I retired from the CIA, (8 dog years is 56 CIA years) and joined a ham radio club. In fact I won first place in the Tri-County QSO Party, two years in a row. Then I had a mess of puppies and got away from Ham Radio for a while. I sure miss my radio though. Why don't you buy me and I'll be your CW operator in the next DX contest?"

I said "Let me see what I can do."

I went back in and asked the owner what he wanted for the dog.

"Ten dollars," the old farmer says.

"Ten dollars? This dog is amazing! Why on earth are you selling him so cheap?"

"Because he's a liar. He never did any of that stuff. He's just a No Code Tech."

1332. Dayton Hamvention Special Achievement Award: Emery McClendon, KB9IBW

Yahoo group: IndyHamRadio
Date: 2008-04-13 17:38:14 UTC
From: Mark Thompson
Topic: 1332 Message: 1332

Emery McClendon, KBPIBW

Dayton Hamvention Special Achievement Award: Emery McClendon, KB9IBW

Emery McClendon, KB9IBW, received the Hamvention award for Special Achievement for his efforts starting Amateur Radio Military Appreciation Day (ARMAD http://www.armad.net/) in 2003. He said he started ARMAD "as a way to have Amateur Radio serve as a tool for the people of our communities to be able to express 'live' support and appreciation for our troops, veterans, retired military and first responders." McClendon, a native of Fort Wayne, Indiana, became an Amateur Radio operator 16 years ago. His interest in organizing Military Special Events derives from his four years of service in the US Air Force and two years in the Indiana Air National Guard.

Amateur Radio Military Appreciation Day has become a popular event, spreading to other communities. Several military support groups have developed an interest in having Amateur Radio as a part of their activities. According to McClendon's award nomination, this has resulted in introducing Amateur Radio "to thousands of people worldwide who otherwise would have never known about our public service."

McClendon is active with two local Amateur Radio clubs, as well as with giving presentations about Amateur Radio to community groups. His activities, including ARMAD, have resulted in many TV, radio and media stories during the past five years, giving Amateur Radio community exposure.

Hamvention Chairman Carl Rose, K8CPR, praised the winners, saying: "On behalf of the Dayton Amateur Radio Association (DARA) and Hamvention 2008 it is my pleasure to congratulate this year's Award Winners. I ask all hams to join me in recognizing the outstanding contributions and the many years of service the winners have given to the Amateur Radio Service."

Subject: [Fwd: ABC's 20/20]

FYI, this week's episode of ABC's 20/20, which airs tomorrow night at 10:00 p.m. (EDT), is all about weather. Some of the stories listed on the show's Web site (http://www.abcnews.go.com/2020) include:
How to Survive in a Tornado
Weather Forecasting: Myth or Reality
Spring Forward, Fall Back, but Why?
Myths About Driving in Severe Weather
Apparently, the theme of the episode is "Your Weather: Myths, Lies and Downright Stupidity."

Yeah, here in Champaign IL it woke me up. Several things fell off shelves in my apartment. Nothing was damaged. But it kind of freaked me out. Kept going for almost a minute at least (I was half awake at the time). I got the time as about 4:45 CDT (0945Z). Just got up to get ready for work and haven't found out where the epicenter was, yet.

Yeah, here in Champaign IL it woke me up. Several things fell off shelves
in my apartment. Nothing was damaged. But it kind of freaked me out. Kept
going for almost a minute at least (I was half awake at the time). I got
the time as about 4:45 CDT (0945Z). Just got up to get ready for work and
haven't found out where the epicenter was, yet.

1340. ENCOMM for earthquakes

Yahoo group: IndyHamRadio
Date: 2008-04-18 18:50:01 UTC
From: Dean, Gregory A SSG RES USAR USARC
Topic: 1340 Message: 1340

Given that an earthquake could do far more damage than tornadoes, what suggestions are there for emergency preparedness? If we ever had a massive earthquake, it could take out roads, buildings, and other infrastructure plus the loss of life that could be in the thousands (huge health risks where more die because of the initial death toll). Look at the destruction that was in the SE Asia a few Christmas' ago.

One could be without fuel, food or health care for weeks. Transportation might be nearly impossible. How do we provide ENCOMM under such situations? Are we even training for such? At least Field Day comes close to such conditions.

Might be something to think about with Field Day coming up....

From: Dean, Gregory SSG USAR
Topic: 1340 Message: 1345

We need to be planning as individuals as well as communities. What if there would be a disaster (which could include earthquakes) so massive that it would be impossible for DHS (state) or even local emergency management to deal with in a timely fashion? What do you do? Are you prepared?

This is about thinking instead of waiting for someone else. It is about being able to survive and helping others get through as well. Think of how people would be in shock, could you step up and lead?

What commo equipment do you have? Is it able to work in a disaster situation? Do you have a way to access power if there is nothing else (to include no fuel). What about food, shelter. Can you survive by camping? Do you have camping equipment? How long can you go without medical assistance?

What is your ability to survive without much of modern technology? A month? A year? 10 years?

1348. Earthquake preparation: water - cooking.

Yahoo group: IndyHamRadio
Date: 2008-04-20 14:31:35 UTC
From: kc9brz
Topic: 1348 Message: 1348

Gas (piped natural gas for heating/cooking) will likely be turned off in the aftermath of an earthquake. And water lines will likely be cut, damaged, or turned off. If not entirely cut off, water supply through the water mains may also be contaminated due to breaks in the lines, and from sediment that the quake stirred up in the water source that is greater than the water plant can handle.

An emergency water supply is smart to have. Water keeps well (though not indefinitely) in the 2-liter bottles that soda comes in. If your tap water is not already chlorinated, add 1 drop household bleach to each 2-liter container. (2 drops of bleach per gallon is rule of thumb.) Rinse the 2-liter bottle well before filling with water, especially if it's a sugar-based soda.

If you don't have a Coleman stove, and don't want to invest that much, there are inexpensive BUTANE single-burner stoves for sale at Asian grocery stores, for about $21. The butane cartridges are about $1.50 or less each. You can buy these at about any Chinese, Korean or Vietnamese store in Indianapolis. These are lightweight aluminum, and won't stand up to the abuse of equipment that is normal at a Boy Scout campout, but if you take care of them, they're good.

1349. butane gas soldering iron

Yahoo group: IndyHamRadio
Date: 2008-04-20 14:35:59 UTC
From: kc9brz
Topic: 1349 Message: 1349

Speaking of emergency prep, I bought a BUTANE soldering iron
at Lowes. Look in the section that has the butane torch.

(Think you might need to solder something when there is
no electricity?)

The refill canisters are ridiculously expensive. Buy ONE refill,
but then go to an ASIAN GROCERY STORE (Chinese, Korean, Vietnamese)
and buy Butane canisters that they use for cooking. They are the
size of a can of hair-spray. Only $1.50 each, and about 3 times
as much butane as the $3.00 refill at Lowes. The valve on these
cans seems to fit the butane soldering iron.

Division News

·Director (Main)| ·Vice Director | ·Illinois | ·Indiana | ·Wisconsin | ·Division News

Central Division News & Views

Issue #18 - April, 2008
Fellow ARRL Members...
I hope these electronic newsletters will be the first in long series of newsletters from your Central Division Director - long after I have departed from the scene. I plan to do about four of these a year, but this could vary depending on the amount of Central Division ham radio news that develops. The news items that appear on the ARRL website will not be mentioned here unless they are of particular interests to hams in this division. As a general rule, items reported here will be in areas of interest to all hams such as: proposed legislation that could or will affect Amateur Radio, area-wide interference and intruder problems, FCC enforcement activity within our division, large-scale public service or emergency communications activities in this region.
Keeping this criteria in mind, if you have news items that you think qualify for publication here, please mail them to me at my address listed on the Director's Page on this website or email me direct at: dick@... Photographs (digital- JPG format or paper) are a welcome addition to any submitted item and will enhance the probability of its publication.

Issue #18 - April, 2008
It's Been Too Long Since My Last Newsletter
Over the last three months, I have received a few inquiries about when my next Central Division newsletter would be published. My last newsletter was published on the Central Division website in December, 2006. I started a newsletter three times in the first quarter of 2007, only to have events over-take my reports. There has been excellent coverage of these events on the ARRL website and I therefore got into the habit of putting off my next newsletter. Yes, I have posted a few single topic division-wide email messages the last 15 months, but I have not taken the time to produce a real newsletter since then.
I apologize for this lack of division-wide communication on my part and this issue is my first effort to get back on track in this regard. As for any rumors about my health, there are no problems other than the routines that develop in response to increasing age - I hit 69 years this past March. More simply put, my personal schedule is a bit more crowded and I have not yet completely accomplished any item on my lifetime to-do list. Or perhaps my years are getting too short. Do you remember how long it took for a year to pass when you were in grade school? It seemed like my birthday, summer vacation, and Christmas took almost forever. Now, planned events and activities arrive much too quickly.
Amateur Radio Service Long-Term Growth?
About 14 months have elapsed since the FCC abolished the remaining Morse code licensing requirement. Contrary to the opinions of some CW enthusiasts, it does not appear we have been overrun by no-code dummies. There has been considerable upgrading of licenses and a small overall increase in the total number of licensees in 2007. The following approximate

numbers are from Dave Sumner’s editorial in the February 2008 QST.
Amateur Radio Service Long-Term Growth?
YEAR New
Technician Technician
To General General
To Extra None
To General None
To Extra
200620,0004,0002,000500200
200725,00020,0005,0002,000400

My long-term concern (3 years after the removal of the Morse code requirement), is will we be gaining even more licensees? ARRL membership increased by about 4000 during 2007 to more than 152,000. This is a welcome reversal of our membership trend in recent years, but will we also see ARRL membership continue to increase 2 years from now?
I believe the answers to both of these questions will be determined by all of us. ARRL has and will continue to provide the recruitment tools. But it’s up to local radio clubs and super-active individuals to mentor new licensees and to introduce them to all that the ARRL does to support amateur radio.
2008 AES Superfest Report
The AES Superfest held at the end of March is an unusual hamfest, if you can call it by that name. There is no admission fee, no flea market, no commercial dealer sales, and it’s held inside the Milwaukee Amateur Electronics Supply store. Several amateur radio equipment manufacturers demonstrate their products, there is a small, but interesting selection of forums, most of the Milwaukee area amateur radio groups are there, there are volunteer exams, and the ARRL sends a staff member to run the ARRL display. This two day event has grown over the years to the point where it will need more floor space, if it’s to grow any larger. It’s not the largest event I attend within the Central Division each year. However, far more ARRL memberships are sold there than at any other hamfest within the division.
The weather in Milwaukee this time of the year is quite variable. I’ve driven up there in snow, ice, driving rain, and in calm sunny 70s. However, I find the reward to be well worth the risk.
Hamfests & Meetings
As of the publication of this newsletter issue, here is my ARRL travel schedule for May, June, and July 2008. It is subject to change if required ARRL meeting dates are changed or there are last minute transportation problems.

Central Division News & Views

Issue #18 - April, 2008
Fellow ARRL Members...
I hope these electronic newsletters will be the first in long series of newsletters from your Central Division Director - long after I have departed from the scene. I plan to do about four of these a year, but this could vary depending on the amount of Central Division ham radio news that develops. The news items that appear on the ARRL website will not be mentioned here unless they are of particular interests to hams in this division. As a general rule, items reported here will be in areas of interest to all hams such as: proposed legislation that could or will affect Amateur Radio, area-wide interference and intruder problems, FCC enforcement activity within our division, large-scale public service or emergency communications activities in this region.
Keeping this criteria in mind, if you have news items that you think qualify for publication here, please mail them to me at my address listed on the Director's Page on this website or email me direct at: dick@... Photographs (digital- JPG format or paper) are a welcome addition to any submitted item and will enhance the probability of its publication.

Issue #18 - April, 2008
It's Been Too Long Since My Last Newsletter
Over the last three months, I have received a few inquiries about when my next Central Division newsletter would be published. My last newsletter was published on the Central Division website in December, 2006. I started a newsletter three times in the first quarter of 2007, only to have events over-take my reports. There has been excellent coverage of these events on the ARRL website and I therefore got into the habit of putting off my next newsletter. Yes, I have posted a few single topic division-wide email messages the last 15 months, but I have not taken the time to produce a real newsletter since then.
I apologize for this lack of division-wide communication on my part and this issue is my first effort to get back on track in this regard. As for any rumors about my health, there are no problems other than the routines that develop in response to increasing age - I hit 69 years this past March. More simply put, my personal schedule is a bit more crowded and I have not yet completely accomplished any item on my lifetime to-do list. Or perhaps my years are getting too short. Do you remember how long it took for a year to pass when you were in grade school? It seemed like my birthday, summer vacation, and Christmas took almost forever. Now, planned events and activities arrive much too quickly.
Amateur Radio Service Long-Term Growth?
About 14 months have elapsed since the FCC abolished the remaining Morse code licensing requirement. Contrary to the opinions of some CW enthusiasts, it does not appear we have been overrun by no-code dummies. There has been considerable upgrading of licenses and a small overall increase in the total number of licensees in 2007. The following approximate

numbers are from Dave Sumner’s editorial in the February 2008 QST.
Amateur Radio Service Long-Term Growth?
YEAR New
Technician Technician
To General General
To Extra None
To General None
To Extra
200620,0004,0002,000500200
200725,00020,0005,0002,000400

My long-term concern (3 years after the removal of the Morse code requirement), is will we be gaining even more licensees? ARRL membership increased by about 4000 during 2007 to more than 152,000. This is a welcome reversal of our membership trend in recent years, but will we also see ARRL membership continue to increase 2 years from now?
I believe the answers to both of these questions will be determined by all of us. ARRL has and will continue to provide the recruitment tools. But it’s up to local radio clubs and super-active individuals to mentor new licensees and to introduce them to all that the ARRL does to support amateur radio.
2008 AES Superfest Report
The AES Superfest held at the end of March is an unusual hamfest, if you can call it by that name. There is no admission fee, no flea market, no commercial dealer sales, and it’s held inside the Milwaukee Amateur Electronics Supply store. Several amateur radio equipment manufacturers demonstrate their products, there is a small, but interesting selection of forums, most of the Milwaukee area amateur radio groups are there, there are volunteer exams, and the ARRL sends a staff member to run the ARRL display. This two day event has grown over the years to the point where it will need more floor space, if it’s to grow any larger. It’s not the largest event I attend within the Central Division each year. However, far more ARRL memberships are sold there than at any other hamfest within the division.
The weather in Milwaukee this time of the year is quite variable. I’ve driven up there in snow, ice, driving rain, and in calm sunny 70s. However, I find the reward to be well worth the risk.
Hamfests & Meetings
As of the publication of this newsletter issue, here is my ARRL travel schedule for May, June, and July 2008. It is subject to change if required ARRL meeting dates are changed or there are last minute transportation problems.
May 15-18, 2008Dayton HamventionDayton, OH
Jun 1, 2008Starved Rock RC HamfestPrinceton, IL
Jun 8, 20086 Mtr Club HamfestWheaton, IL
Jul 11-12, 2008Indianapolis HamfestIndianapolis, IN
Jul 13, 2008FRRL HamfestAurora, IL
Jul 17-20, 2008ARRL Board MeetingHartford, CT
Aug 3, 2008IL State ARRL ConventionBolingbrook, IL

I hope to see many of you at these hamfests. In addition to shopping for new and used equipment, they are a great way to renew and develop friendships and to meet some of the voices you have heard on your radios.

1353. WCARC hosting CoCoRahs Program/Training May 8th 7 PM - Columbia City

Yahoo group: IndyHamRadio
Date: 2008-04-23 03:56:40 UTC
From: Dan
Topic: 1353 Message: 1353

16 April 2008
FOR IMMEDIATE RELEASE
Volunteers Needed for Nationwide Rain and Snow Network
The Community Collaborative Rain, Hail & Snow Network (CoCoRaHS) is expanding across northern Indiana and volunteers are needed in Whitley and surrounding
counties. This nationwide project, located online at http://www.cocorahs.org, offers an
opportunity for anyone to become a volunteer observer of rain and snowfall. Those attending a
training session and signing an agreement form will be provided an official National Weather
Service approved rain gauge for free.
In support of this expansion effort, the National Weather Service Northern Indiana
Office, the Indiana State Climate Office at Purdue, and the Whitley County Amateur Radio
Club will host a CoCoRaHS training session Thursday, May 8th at 7:00 PM EDT at the
Peabody Library in Columbia City. The hands-on session, lasting around 90 minutes, will
educate volunteer observers on how to accurately set up and read their new rain gauges and
report the data via the internet.
CoCoRaHS came to Indiana in February of 2006 and now has over 800 observers of all
ages from across the Hoosier State. Indiana is one of the fastest-growing networks and the first
state in the Midwest to join this nationwide network of nearly 10,000 volunteers across 29
states.
CoCoRaHS is a volunteer, grass-roots network dedicated to the monitoring of precious
water resources across the country. The public, and organizations involved in agriculture,
public safety, and natural resources management will find great benefit from this data,
available free of charge to all on the network website.
CoCoRaHS also represents an important new portion of nationwide drought monitoring
and warning networks for flood monitoring and prediction services.
Sam Lashley, Northern
Indiana network coordinator and Senior Meteorologist with the National Weather Service

Northern Indiana Office, says that the project will help forecasters pin point areas of drought,
heavy rain and potential flooding. "Flooding kills more people each year than tornadoes.
Timely and accurate reports from CoCoRaHS will aid us in predicting when and where
dangerous flooding will occur. During the summer of 2007, CoCoRaHS volunteers were
crucial in helping determine areas that were experiencing drought, heavy rain and flooding
across all of Indiana," said Lashley.
Lashley is confident that expansion efforts in Whitley county and surrounding areas
will be as successful as those in other portions of Indiana. "We've been extremely fortunate so
far. Hundreds of extremely interested volunteers statewide have signed up already and the
benefits have been tremendous. Volunteers have included senior citizens, children with an
interest in science, adult weather enthusiasts, and even schools and home schooled children,"
said Lashley.
Attendance at the May 8th session is free, and open to any interested resident of the
state of Indiana. Additional information can be found at www.weather.gov/iwx or
www.cocorahs.org. Interested volunteers are asked to RSVP by contacting Sam Lashley at the
National Weather Service office in Northern Indiana (Sam.Lashley@...), or by calling
574-834-1104.

1354. Whitley Co. ARC - W5YI VE Testing, 4/26/2008, 9:00 am

SB QST ARL ARLB008
ARLB008 Court Finds FCC Violated Administrative Procedure Act in BPL Decision

The US Court of Appeals for the District of Columbia Circuit today released its decision on the ARRL's Petition for Review of the FCC's Orders adopting rules governing broadband over power line (BPL) systems. The Court agreed with the ARRL on two major points and remanded the rules to the Commission. Writing for the three-judge panel of Circuit Judges Rogers, Tatel and Kavanaugh, Judge Rogers summarized: "The Commission failed to satisfy the notice and comment requirements of the Administrative Procedure Act ('APA') by redacting studies on which it relied in promulgating the rule and failed to provide a reasoned explanation for its choice of the extrapolation factor for measuring Access BPL emissions."

The Court agreed with the ARRL that the FCC had failed to comply with the APA by not fully disclosing for public comment the staff studies on which it relied. The Court also agreed with the ARRL that the Commission erred in not providing a reasoned justification for its choice of an extrapolation factor of 40 dB per decade for Access BPL systems and in offering "no reasoned explanation for its dismissal of empirical data that was submitted at its invitation."

The Court was not persuaded by the ARRL's arguments on two other points, on which it found that the Commission had acted within its discretion.

The conclusion that the FCC violated the APA hinges on case law. "It would appear to be a fairly obvious proposition that studies upon which an agency relies in promulgating a rule must be made available during the rulemaking in order to afford interested persons meaningful notice and an opportunity for comment," the Court said, adding that "there is no APA precedent allowing an agency to cherry-pick a study on which it has chosen to rely in part."

The Court continued, "The League has met its burden to demonstrate prejudice by showing that it 'has something useful to say' regarding the unredacted studies citation omitted that may allow it to 'mount a credible challenge' if given the opportunity to comment." Information withheld by the Commission included material under the headings "New Information Arguing for Caution on HF BPL" and "BPL Spectrum Tradeoffs." The Court concluded that "no precedent sanctions such a 'hide and seek' application of the APA's notice and comment requirements."

With regard to the extrapolation factor, the Court ordered: "On remand, the Commission shall either provide a reasoned justification for retaining an extrapolation factor of 40 dB per decade for Access BPL systems sufficient to indicate that it has grappled with the 2005 studies, or adopt another factor and provide a reasoned explanation for it." The studies in question were conducted by the Office of Communications, the FCC's counterpart in the United Kingdom, and were submitted by the ARRL, along with the League's own analysis showing that an extrapolation factor closer to 20 dB per decade was more appropriate, as part of the record in its petition for reconsideration of the FCC's BPL Order. The Court said that the FCC "summarily dismissed" this data in a manner that "cannot substitute for a reasoned explanation." The Court also noted that the record in the FCC proceeding included a study by the National Telecommunications and Information Administration that "itself casts doubt on the Commission's decision."

The briefs for the ARRL were prepared by a team of attorneys at WilmerHale, a firm with extensive appellate experience, with assistance from ARRL General Counsel Christopher D. Imlay, W3KD. Oral argument for the ARRL was conducted by Jonathan J. Frankel of WilmerHale. Oral argument was heard on October 23, 2007; the Court's decision was released more than six months later.

After reading the decision, General Counsel Imlay observed, "The decision of the Court of Appeals, though long in coming, was well worth the wait. It is obvious that the FCC was overzealous in its advocacy of BPL, and that resulted in a rather blatant cover-up of the technical facts surrounding its interference potential. Both BPL

and Amateur Radio would be better off had the FCC dealt with the interference potential in an honest and forthright manner at the outset. Now there is an opportunity to finally establish some rules that will allow BPL to proceed, if it can in configurations that don't expose licensed radio services to preclusive interference in the HF bands."

ARRL Chief Executive Officer David Sumner, K1ZZ, added: "We are gratified that the Court decided to hold the FCC's feet to the fire on such a technical issue as the 40 dB per decade extrapolation factor. It is also gratifying to read the Court's strong support for the principles underlying the Administrative Procedure Act. Now that the Commission has been ordered to do what it should have done in the first place, we look forward to participating in the proceedings on remand, and to helping to craft rules that will provide licensed radio services with the interference protection they are entitled to under law."

ARRL President Joel Harrison, W5ZN, concluded: "I am very pleased that the Court saw through the FCC's smoke screen and its withholding of valid engineering data that may contradict their position that the interference potential of BPL to Amateur Radio and public safety communications is minimal. The remand back to the FCC regarding their use of an inappropriate extrapolation factor validates the technical competence of Amateur Radio operators and especially of the ARRL Lab under the direction of Ed Hare, W1RFI. We are grateful for the work of our legal team and especially for the unflagging support of the ARRL membership as we fought the odds in pursuing this appeal."

1357. Re: ARRL Central Division Newsletter April 2008

Yahoo group: IndyHamRadio
Date: 2008-04-29 13:54:34 UTC
From: Brad Knapp, K9MHZ
Topic: 1352 Message: 1357

Thanks for posting, Mark. I'm going to gently be a bit of a contrarian here; hoping to not offend anyone.

OK here goes....where has our division representation been? His position REQUIRES communication to his "constituency"....I've emailed him over time in the past to just say "hello" and "thanks", hoping to get even the least amount of a reply to be sure that someone was actually representing us. Nothing, nada, zip, zero. Now, on this posting, he's soliciting inputs/news so that he can have material to post in the future. Maybe it's just me, but I think someone in this position needs to PORACTIVELY get out amongst the troops and find out for himself what's happening. I know there are lots of very bright, motivated hams out there doing great things for the hobby and public service....I'm not so sure that our division "representation" can make the same claim.

OK, I'm done. Call it a cleansing rant....sincere apologies to anyone offended.

Best,

Brad, K9MHZ

Brad you make some good points. The Central Division has three different email lists available for the disemination of State Section and Central Division information. InHam - for Indiana, IlHam - for Illinois, and WiHam for Wisconsin.

I subscribe to InHam and there hasn't been a lot of traffic in the last year.

ARRL Members can also go to the ARRL Member site and configure your options to include getting emails from Section and Division Managers. I just checked mine to make sure I had it turned on.

http://www.arrl.org/members-only/memdata.html?modify=1

The Central Division website: http://www.central.arrl.org/

Has a lot of information on it, including hamfest schedules, testing sites and dates, and other tidbits useful for the Division ARRL Membership.

The Indiana Section website also has some good information: http://www.arrl.org/sections/?sect=IN

I am the Indiana ARRL Bulletin Manager, and frankly I have only issued about 4 bulletins this year, I'd love to put one out weekly but I can't seem to get anyone to submit much in the way of material. Jim Sellers K9ZBM is the current Section Manager for Indiana and his term ends at the end of June. If you or anyone else is interested in running for Section manager, you can get all the details in the January 2008 QST Magazine.

See: http://www.arrl.org/FandES/field/org/sm.html

Unfortunate, but true. I've been the admin for the InHam list for the
past several years. We have well over 100 subscribers, but very little
activity. I post from time to time asking to hear more about hamfests,
club meetings, test sessions, or any other ham related news but we don't
have much activity.

However, the list could be a very useful tool. And will be there if
needed. If anyone needs any help with InHam, drop me a line:-)

>Thanks Zack, I think my mileage varied on this one, but I do believe
>you. I'll look forward to seeing him at the next event.

I've seen Dick at just about every Fort Wayne Hamfest (mid-November each year) since he was elected. I usually try to attend the ARRL forum at that hamfest to see what he has to say. I have asked questions at past forums and found Dick's replies to be useful.

On the other hand, I've emailed him twice over the years and both times, got no response.

Dick is an experienced ham and an experienced businessman. I think we are fortunate to have him as Central Division Director. I suspect that he gets buried with emails and sometimes has to make a tough decision as to which ones merit a reply.

One other point, I do not believe that these positions should be "lifetime appointments". The division directors come up for re-election every two or three years. If there is someone out there who feels that they are worthy of our consideration as a candidate and who is willing to volunteer the time that I suspect this position requires, I encourage them to seek nomination.

1363. It Takes a Club

It Takes a Club

By David Sumner, K1ZZ
May 01, 2008

Looking at variations in Amateur Radio licensing activity and new ARRL membership around the country, it's apparent that there are "hot spots" where newcomers are joining our ranks in relatively large numbers compared to other areas.

What does it take to make such a "hot spot"? One answer is that it takes a local radio club -- but not just any club. It takes a club that has made a commitment to reach out to the community or communities that it serves, with a program to bring friends and neighbors from a vague awareness of Amateur Radio all the way to being active radio amateurs.

Such clubs don't just happen. It takes vision, leadership and a lot of hard work. It takes club officers and members who are willing to venture beyond their normal comfort zone. It takes a welcoming, supportive and non-judgmental attitude on the part of everyone in the club that a newcomer is likely to encounter.

The good news is that once you have such a club it becomes -- almost -- a perpetual motion machine. Here's how it works.

Assuming that your community has a radio club and that you're a member, the first step is to develop a culture of outreach and welcome within the club. This takes conscious effort, especially if your members are in the comfortable rut of talking to the same group of friends all the time.

Imagine that you're listening to the club's repeater for the first time, as an amateur who is either new to the community or a new licensee. Would you feel welcome to join in the conversation, or would you feel that you would be regarded as an intruder? Now, imagine that you're attending a club meeting for the first time. You walk in and see knots of people talking among themselves. Would anyone greet you and introduce them-selves or would you be left standing by yourself? Before you're ready to make a serious outreach effort you must be able to answer these questions positively.

Being friendly and welcoming is necessary, but not sufficient. Does your club offer licensing classes? Do you help new licensees get over the many other hurdles -- selecting and installing antennas, learning how to use equipment, debugging interference to and from consumer electronic devices, and so on -- that stand in the way of aspiring operators? Do you make sure that their first on-the-air contact is a positive

experience, and offer nets and roundtables that they will want to join? Do you expose them to the wide variety of activities that they can pursue as radio amateurs? Do you encourage ARRL membership, so they will enjoy full access to membership benefits and will receive the monthly stimulus of QST?

If you have all of these bases covered, congratulations! Your club is ready to promote itself to the community. Most clubs already have some experience doing this, with varying degrees of success. While a full discussion of the do's and don'ts is more than this page can accommodate, here are a couple of thoughts.

There are many amateur licensees in your community who are not presently active. With the caveat that some are Silent Keys and others have not kept their addresses current in the FCC data base, it's easy to compile a mailing list for an invitation to an Open House or other special event. If you succeed in reactivating them, their renewed enthusiasm may infect their friends and family members.

If you invite the general public to come and see your club, make sure there's something for them to look at. Even a static display with some QSL cards and photos of past club events can be an ice-breaker, giving your greeters something to talk and invite questions about.

Field Day is just around the corner. With proper planning it can be an ideal event for introducing Amateur Radio to your community, and your club to existing and prospective licensees. This year there is a new, easy-to-use tool for publicizing your club's Field Day site: the ARRL Field Day Station Locator Web Site:

www.arrl.org/contests/announcements/fd/locator.php
<http://www.arrl.org/contests/announcements/fd/locator.php>

But remember -- an invitation to visit your site carries with it the responsibility to ensure that visitors (including children) are safe and that they have a positive, informative experience. If your Field Day operation is open to the public, the proper greeting of visitors cannot be left to chance -- it's as important a part of Field Day planning as the antennas, equipment, operators and food.

Every club has its ups and downs. If yours has been in the downward part of the cycle, now is a good time to take stock -- to capitalize on the strengths and overcome the weaknesses. The opportunities for club growth, in quality as well as quantity, have never been greater.

Oh, about that "perpetual motion machine." Have you ever attended a club meeting where there was to be an election of officers, but there were more offices than candidates? If not, you're fortunate. Many clubs with static or shrinking membership lists find that it's difficult to fill club offices or undertake new projects. Once a club finds the formula for attracting and nurturing new members, maintaining the club's vibrancy and activity becomes much easier.

The best local clubs provide a logical path for identifying and developing their future leaders, from student to new member and in succession to greeter, committee member, committee chairman, and officer. Your club's president for 2012 may be someone who sees Amateur Radio in action for the first time on Field Day -- or may be sitting in your licensing class right now!

Cables to Go - USB 2.0 IDE Adapter - Ever have an old IDE hard disk that you would like to use again, or pull the data from? This little gadget works like a charm. One end plugs into your USB slot, the other end into the data connector on the IDE drive. Also includes the hard drive power adapter so the drive does not need to be plugged into a working PC. This is it right here: http://www.cablestogo.com/product.asp?cat_id=1501&sku=30500

The power adpater is $29.88 from Cables to Go and the IDE Adapter is $58.99 - I have used this setup one time and it is in perfect working order, with the original box, packing, and software. $50.00 plus shipping gets it all. I ship via US Postal from 46184 - total weight is 19 oz.

Have you ever wanted to be a podcaster? I did...but I just don't have the time...so here goes.

Behringer Eurorack UB802 - Ultra Low Noise design, 8 inputs, 2 bus mixer WITH built in premium microphone preamps. New, they are about $90.00, this one has been used less than an hour, in original box with all the packing, including the power adapter and owners manual. I have had this about 8 months and played with it for about three nights. I would love to be a world famous podcaster but I don't have time to become that interesting. I am asking $50.00 plus shipping. It weighs 2.3 KGS (about 5 lbs). - http://www.behringer.com/ub802/

Shure PG-58-XLR mic, with 15 foot cable, and XLR connectors on both ends. Plugs right into the UB802. This is a fantasic microphone, professional performance grade. New they're going for about $60.00 I would like to have $40 for this one, plus shipping. Weighs about 4 lbs with the box, manuals, cables, etc etc. I bought this with the UB802.

I must add my 2 cents worth. As Zack stated, our central division director is Dick Iseley W9GIG. He is one of the best directors that the ARRL has had. He not only attends the majority of the Indiana hamfests but is VERY responsive. If he has not responded to you, there is something causing him not to get your messages.

His e-mail is w9gig@...

1370. Operating Question

Yahoo group: IndyHamRadio
Date: 2008-05-06 02:41:10 UTC
From: KB9BVN
Topic: 1370 Message: 1370

I'm thinking about going to the Motor Speedway on the 17th for the day, and I was wondering if I could take my QRP rig and portable vertical and operate CW from the infield during the day?

I thought there was a station working the Speedway last year but I can't remember who it was.

Anyway...any ideas?

Thanks

In the past, there has been a special event station that operated in conjunction with events at Indianapolis Motor Speedway. The station uses the call W9IMS, a club call issued to the Indianapolis Motor Speedway Amateur Radio Club with WY9T as the trustee. If you check their listing at QRZ.com, you'll find their 2008 operating plans. Note that they do not actually operate from the speedway, but from a permanent location elsewhere in Indianapolis.

Thanks Bob...that's the group I was thinking of. I'll check it out.

I can pop a PAC-12 vertical up in about 2 minutes and take it down in about the same. That and a KX-1 make for some really quick portable operations.

Good Morning!

Years ago there was an interference problem that was determined to be created by an amateur operating too closely to some of the television feed cabling. There was also a name to be used as a contact point for anyone wishing to operate from the stands in the future.

I do not remember the specifics, only that it happened --- so you might prowl around and see if there is a communications officer or some such thing to contact at the track. Heck, no sense in carrying and babysitting the rig if you can't use it when you get there!

Have a great time at the track!

Hey Mike!

Long time no talk to. I was thinking about just calling the track today to see if I could get permission. Although sometimes it's easier to just beg forgiveness than ask for permission. <grin>

The rig I am going to take fits in my hand so I just put it in a padded camera case and clip it on my belt. The antenna rolls up in a cloth carrying thingie about 16 inches long and about 4 inches thick.

You still down there in Spencer?

Yup, still down here hiding out in the woods! And still hopelessly involved in astronomy! The car, RV, vacation days, budget, all seem to revolve around getting to dark sky sites and looking up.

I've got some of that ham gear stuff around here somewhere, but it's been so long since I've used any of it, I would have to be completely retrained! Although I did purchase a new TS-700A a couple of years ago --- it lived in the front seat of the car for a short while (two weeks), and now lives out in a cardboard box. Quite a waste huh.

I totally agree about the begging for forgiveness line.

Here's hoping that you achieve a major pileup as you operate portable IMS!

Beg for forgiveness, while you sit in a holding cell!

Look for Brian on TV. He will be that guy running
across the track with yellow shirts trying to tackle
him down and arrest him. Blowing their whistles and
the whole deal! Just like those guy at a football
game that have too much to drink and run out on the
field and try to make it to the end zone.

Brian, Wear your call letters on the back of your
shirt and hold that PAC-12 up high so we can all see
it and know it is you! Better yet just paint your
chest and you'll make that site where they post all
the best looking hams.

GOOD LUCK!

1378. RE: [IndyHamRadio] Operating Question

Yahoo group: IndyHamRadio
Date: 2008-05-06 13:04:01 UTC
From: Ray, K9DUR
Topic: 1370 Message: 1378

Since 2004, the Indianapolis Motor Speedway Amateur Radio Club has operated using the call W9IMS during all 3 races at the Speedway each year. However, they were operating from a contest station located on the northeast side of Indianapolis. During negotiations with the IMS management to be designated the "official" Indianapolis Motor Speedway amateur radio station and to acquire the right to use the IMS logo on the QSL cards & certificates, the IMS management made it very clear that, for a variety of reasons, absolutely NO radio transmissions were to take place from within the Speedway grounds.

If you did try to set up a portable station, the IMS security personnel would probably make you take it down & then you would find yourself sitting in the middle of Georgetown Road. More importantly, you could place in jeopardy the agreement between the W9IMS operation and the IMS management.

Subject: RE: [IndyHamRadio] Operating Question

Since 2004, the Indianapolis Motor Speedway Amateur Radio Club has operated using the call W9IMS during all 3 races at the Speedway each year. However, they were operating from a contest station located on the northeast side of Indianapolis. During negotiations with the IMS management to be designated the "official" Indianapolis Motor Speedway amateur radio station and to acquire the right to use the IMS logo on the QSL cards & certificates, the IMS management made it very clear that, for a variety of reasons, absolutely NO radio transmissions were to take place from within the Speedway grounds.

If you did try to set up a portable station, the IMS security personnel would probably make you take it down & then you would find yourself sitting in the middle of Georgetown Road. More importantly, you could place in jeopardy the agreement between the W9IMS operation and the IMS management.

If we're in jail we'll need to know the tap code.

Put the alphabet in a 5 x 5 grid...omit the letter K

So the letter B would be one tap (row 1) and then 2 taps (second letter)

And you know this how?

By the way, the W9IMS station was about the only station I heard
locally on 10-meters last year. 5x9, even after dark, even
in the off part of the solar cycle. :-)

I can hardly wait for 10m to pick back up again, so I can
fire up the HTX-10.

From: KB9BVN
Topic: 1384 Message: 1384

Glad you asked...in 1971 or 1972 I was a kid that had just gotten a POW-MIA bracelet that had the name Jeremiah Denton inscribed upon it. It was the "in" thing to do, so I spent abot $3.00 to get mine. In 1973 Denton was released by the merciless North Vietnamese. In 1976 he wrote a book that was originally called "When Hell was in Session". The book is the story of his survival as a POW in North Vietnam, and Denton goes to great lengths to make sure the reader understands every small detail of life as a POW. It is not for the faint hearted as the graphic details are laid out in a very meticulous fashion, it gave this young reader many sleepless nights. .

I highly recommend the book, I have given copies to my sons long ago.

Anyway, Denton goes to some lengths to describe how he was able to interacts with the other POW's by using the now famous "Tap Code". John McCain, Ev Alvarez, and a few others in the POW camp have described the "Tap Code" in articles and books they have written or had written about their experiences in a North Vietnamese POW camp.

It was just something that has kind of stuck in my mind....on a ham radio note....Denton is the prisoner that managed to blink out the word T-O-R-T-U-R-E when the North Vietnamese paraded him in front of a TV camera for a publicity/propaganda shoot. Denton used morse code, and his blinking eyes to get the message out.

1385. Help needed for transformer calculations for full wave end-fed antenna.

Yahoo group: IndyHamRadio
Date: 2008-05-07 14:56:06 UTC
From: kc9brz
Topic: 1385 Message: 1385

I've found some web pages about making a matching
transformer (coupler) to drive an end-fed antenna.

But the verbage assumes more knowledge on the part
of the reader than what I have. (I passed my
General test just by memorizing part of the question
pool, and didn't learn much electronic theory. I know
what resistance [R] and capacitance [C] are, but
reactance, inductance, and impedance are still a mystery
to me.)

Here's the deal-ee-o:

Due to the tower and building/shack and support configuration,
we want to try a full wave (266 feet) end-fed antenna for
75/80 meters. A G5RV, half-wave dipoles and inverted-vees
have been tried and haven't been good enough. We have a
building with a metal roof, the tower was put smack-dab
next to the building, and that's probably been the major
influence.

(We're also going to try a full wave and 2-wave horizontal
loop, but that's another project.)

We need to drive this full-wave end-fed antenna with coax from
the ham shack to the outdoor antenna switch. Then from the
outdoor switch up the tower, to the end of the antenna we can go
coax or other options.

We have a MFJ 1500 watt roller-inductor antenna tuner
inside, next to the transmitter. But I understand we need
a "matching transformer" at the end of the end-fed antenna.

We also have a Kenwood TL-922A 1000 watt amp, so we want
to make the matching transformer enough to handle 1 KW.
(75 meter band has a lot of noise on it, so we need the oomph
to get through.)

The purpose of the ham station is to support disaster services
of a major non-profit organization should land-lines, sat-phones,
and cell-phones go down. We need to reach places that are
too close for 40/20 meters, and too far out for VHF.

The majority of the operating is going to be between 3.8 and 4.0
Mhz (phone) for this antenna, but we'd also like to get at
least a 1.5 SWR or better down to 3.5 Mhz using the inside
tuner.

I've found what looks like a simple matching tranformer to construct at: http://www.aa5tb.com/coupler3.html

Would someone like to help me, and do the calculations for computing the turns ratio and capacitance value for this thingee for 3.8 to 4.0 Mhz going into a full-wave antenna, and suggest the parts that would handle 1 KW ?

Thanks.

D...my experience with an end fed antenna has always been with half waves. I can help you with that.

Assume a Q of 20 for 4 Mhz, and feed point impedance of 4K Ohms (end fed half waves have a very high feed point impedance...could be 3.5K to 4.5K Ohms depending on how accurate you cut your wire)

Now go visit : http://www.nt7s.com/index.php5?page=efhw

He has all the math laid out in some detail, this can give you your L and C numbers. Jason is a EE student and is very good at this.

The T200-2 Toroid has good Q between 500 Khz and 10Mhz...and is pretty big. I do not know if it can handle a KW though.

http://toroids.info/T200-2.php

For the Cap...I'd use a air variable with some reasonable spacing between the plates. The voltage at the feedpoint could be more than 1500 volts at that power. I have see 100w show about 600v on a EFHW.

This is one of the best webs out there for EFHW antenna construction:
http://www.w8ji.com/end-fed_1_2_wave_matching_system_end%20feed.htm

1387. Indiana Section Info

Yahoo group: IndyHamRadio
Date: 2008-05-07 18:50:35 UTC
From: Brian Murrey
Topic: 1387 Message: 1387

Our current Section Manager, Jim Sellers K9ZBM, will not be seeking re-election at the end of his term on June 30th. The ARRL published a request for nominations in the January and February QST and received none. So according to Steve Ewald WV1X at the ARRL, Jim will likely remain as the SM until they can find a new SM.

I got this from Steve Ewald today:

BEGIN

The ARRL will be re-soliciting for nominations for the Indiana Section Manager's position in the July QST -- and once again in the August QST.

The "Happenings" column will have an article that reports the upcoming Section Manager election cycle.

For a little background in the re-solicitation, the notice that nominations were open for the next term of Indiana Section Manager (beginning July 1) was announced in January and February QSTs.

The receipt deadline of early March came and went without any nominations for Indiana Section Manager. We expect Jim, K9ZBM, will be staying on as SM until a new Section Manager is properly named through nomination or election.

The protocol indicates that ARRL needs to re-solicit for nominations for the Indiana SM position. The re-solicited term of office will be for 18 months (starting in January 2009) instead of the normal 24 months (2 years) beginning in July 2008.

Essentially, nominations are already open. The nomination period will be announced in the July and August QST. The nomination period ends on September 5, 2008.

If there is more than one valid nominee for the Indiana Section Manager position, then an election would be held in the Fall. The winner would then take office on January 1, 2009. If just one valid nomination arrives by the deadline, that person would be considered elected and his or her term of office would begin on January 1, 2009.

More information on the SM nomination/election process and procedures are found at this link:

http://www.arrl.org/FandES/field/org/smterms.html.

END

So, if you are interested, now is the time to make your interest known. Jim has been a great SM and has given a lot of years to Indiana Amateur Radio wearing numerous hats. I will be getting this info into bulletin format and will try to get it to as many of the Indiana nets that I can. If you want a copy of the bulletin to read on your net, you can get it from this list as I will publish it here as well.

I have to ask this, but why would the omitted letter be K? Why not something less-frequently used like X or Z?

On a side note, if anyone has seen the movie "The diving bell and the butterfly", it is about a guy that had total paralysis except for his ability to blink, known as locked-in syndrome. It's a true story, and the way that they communicated with him was, for every letter, they would read off the alphabet, in order of frequency of use, and he would blink when they got to the proper letter.

Needless to say, this took forever, but even so the guy actually wrote a book this way. I couldn't help but wonder why on earth they wouldn't use something like morse code (just put a chart of letters and morse symbols in front of the guy) or the tap code described here.

The reason given for the omitted K (might have been a C....can't recall) was because they both sounded the same, so they were interchanged.

I have heard of guys using blow tubes to send CW when they had suffered paralysis. I have never seen it, just heard about it.

1392. FISTS Sprint today

Yahoo group: IndyHamRadio
Date: 2008-05-10 14:34:14 UTC
From: KB9BVN
Topic: 1392 Message: 1392

The FISTS Spring is today beginning at 17:00Z and running until 21:00Z.
(1PM to 5PM EDT)

For more details: http://www.fists.org/sprints.html

Basic CW Operating Manual: http://www.fists.org/basiccw.html

FISTS is a well established and recognized CW organization in the world of amateur radio. Founded in 1987 by Geo Longden, G3ZQS, it now has a membership in the ten thousands, is world-wide, and growing daily.
What FISTS wants to accomplish:

1. To further the use of CW on the amateur bands.
2. To encourage newcomers to the CW mode.
3. To engender friendship within the membership.

If you're an old hat at CW, or a CW new comer, join in and have some fun today. We slow down when needed.

73 de KB9BVN

When you work a FISTS, you've worked a friend.

1397. Re: [IndyHamRadio] FISTS Sprint today - my experience

Yahoo group: IndyHamRadio
Date: 2008-05-11 01:19:44 UTC
From: Ivin Flint
Topic: 1392 Message: 1397

I enjoyed the sprint today from the shores of Lake Monroe. My Daughter and I hiked 5 miles in through the Hoosier National Forest and I spent a couple hours working radio while my daughter looked around the edge of the lake. The bands were not too good so I only made 3 QSO's into the sprint but was QRP to a PAC-12 portable vertical.

The coolest part of operating was QSOing with a group in VT having a boy scout event. My daughter and I both enjoyed talking on SSB to them. We were as excited as they were to talk on the air! It is amazing what you can do with 10 watts or less.

Then the 5 mile hike out to the car. What a GREAT DAY!

1398. IP&L and RFI from power poles.

Yahoo group: IndyHamRadio
Date: 2008-05-12 21:46:25 UTC
From: Shawn Noe
Topic: 1398 Message: 1398

I have located a pole with my 70CM hand held that I believe some nasty sounding noise is coming thru on my all of my radios. On HF it raises my noise floor to about S9, on 2M on weaker signals I can hear it on FM. I can not hear it on my 440 base, but I walked around with a 70CM portable listening to a weak FM repeater and found the offending pole. I wrote down the number on the pole. It's a nasty looking pole anyway, vines have climbed it and the wood on the pole looks really old.

Does anyone know if there is a special number I can call at IP&L for RFI issues? Somehow I don't think I will get much help using the standard IPL phone system.... most don;t know much about RFI.

Shawn,

Try the customer service line. I bet they know what to do. If they don't, then go to the FCC website and get your complaint opened.

If they are like Duke in Indiana, you'll need to ride herd on the complaint pretty close.

I had a pole I questioned with IPL and within a week
they were there and checked it out. I was wrong about
it, but IPL was very quick to respond. I live on the
outer parts of their service area no less. I hope you
have a good experience with them as well.

Like Brian said, just call customer support and they
should help you out.

From: Don West
Topic: 1398 Message: 1402

Be sure to give them the number on the pole, that will save them time and they are more likely to get the problem that affects you the most. If the give you a serious case of "we don't care about your noise problem", see if the noise is as loud on air craft frequencies and report it to the FAA. They are more forceful than the FCC with interference complainants since they still use AM.

Best Regards,

Don West

You have used the right method for tracking it. A signal will travel up and down the lines on lower frequencies but will only be heard very near the source on higher ones.

Does the noise get worse during a rain? How about on a very dry day? Bad insulators get noisier when damp. A bad connection is usually worse when dry. A common noise source is a corroded neutral connection. When the corrosion gets wet it will sometimes quiet down.

If somebody here has a magic number that would be great. Otherwise call the repair number. I had good luck with IP&L but that was some years ago.

Do not try to shake the pole in any way. It could bring the lines down on you. I think Indianapolis uses 7200 V primaries, however the older 2400 volt wires would be bad enough.

1406. Michigan ARRL DRG's Suggested SSID's

Yahoo group: IndyHamRadio
Date: 2008-05-16 01:35:11 UTC
From: Dan Dahms
Topic: 1406 Message: 1406

I have done some initial searching via the internet concerning SSID protocols. Since the ARRL never bothered to establish a standard and because the Indiana Digital Experimenters Assoc. died and knowone to my knowledge has picked up the pieces, here we sit.

In fact the whole country has been a mix of different protocols. If we are reviving packet we should try and establish some kind of standard at least statewide no matter what it is.

Here is what Michigan Section ARRL DRG had proposed back in 2005.

Dan M. Dahms N9WNH
President
Whitley Co. ARC Inc.

ARRL Michigan Section Digital Radio Group (DRG)

Working Group
for
Operational Standards

Recommended SSID Assignments:
At the first DRG meeting held Saturday March 5th 2005 in Lansing, here are the suggested SSID assignments that were discussed. Many of these are 'legacy' uses and some are new assignments. These are not cast in stone but are supplied here as a suggested guideline.

SSID PURPOSE
========= ===============
none (-0) home stations
-1 home station personnal mailboxes (usually a TNC-based PBBS
-2 gateways
-3 full-service BBS's (those that forward mail/bulletins)
-4 network nodes (having two or more radio ports that perform routing functions via TCP/IP, NetROM, etc.)
(Can be combined with BBS's that also perform routing)
-5 console/keyboard -or- printer
-6 conference bridges
-7 cross-band digipeaters (and KA-nodes)
-8 cross-band digipeaters
-9 mobile / modats
-10 WL2K
-11 - unassigned -

-12 - unassigned -
-13 - unassigned -
-14 - unassigned -
-15 (often used as a downlink address when exiting the far
end of a network connection)

Enjoy!

1407. Impressions of Dayton 2008

Yahoo group: IndyHamRadio
Date: 2008-05-17 20:56:59 UTC
From: Dean, Gregory A SSG RES USAR USARC
Topic: 1407 Message: 1407
Attachments: 1 described; binary payloads are missing from this source WARC

Well, I went to Dayton yesterday (Friday). Basically very little new equipment. ICOM had the IC-7200 and Yeasu introduced the VX-8R.

The IC-7200 is basically the IC-7000 in a hardened case for ENCOM work. HYPERLINK "http://www.universal-radio.com/catalog/hamhf/0026.html" http://www.universal-radio.com/catalog/hamhf/0026.html.

Saw the VX-8R at Dayton yesterday. Here is Universal Radio's web page HYPERLINK "http://www.universal-radio.com/catalog/ht/0008.html" http://www.universal-radio.com/catalog/ht/0008.html. It covers 6/2/220/440 at 5W (1.5 on 220). It does APRS with optional GPS. Also will have an optional Bluetooth headset. It is like a large VX-3, the same thickness but tall and wider. The unit they had at Dayton you could touch but the lettering was not permanent. They said it came with a 1400 mAh battery. It is to be available in late June at between $330 and $350, list.

As for APRS, ARGENT (HYPERLINK "Http://www.argentdata.com" Http://www.argentdata.com) has a new TNC for $90. It works with the Garmin Nuvi 350 and will show APRS stations on the GPS unit. They are building a five watt transceiver which will also house the TNC and should be priced about $190.

As I only went one day, there may be one or two items that were the hot selling (low price) but we had not heard of any.

One thing of interest that I learned was that ICOM and Kenwood have each a 5% interest in each other. And are teaming up on digital radios. Kenwood does have a D-Star radio in Japan. Word was that Motorola has fired many of the senior staff at Yeasu and only wants the P25 division and the low cost commercial/marine/aviation radios. Also the Tetra radio (like P25) in Europe is primarily low cost radios (like cell phones) with TDMA. And the second wave of P25 will have TDMA as well as FDMA (multiple repeaters).

Any other insights that I missed?

Kenwood sells a version of the Icom IC-800 D-Star radio in Japan only.

All of the Japanese radio manufacturers that are in the land mobile business, including Icom, Kenwood, and Vertex, currently produce APCO P25 radios for VHF and UHF. That being the case, I wonder how much effort Kenwood and Vertex will spend developing radios for an amateur radio-only protocol like D-Star.

One other point about the Japanese radio business. Kenwood and JVC have had a working partnership for several months and it was announced just recently that Kenwood and JVC are going to merge. My gut feeling is that home entertainment and car audio will always be a much bigger market to that combined company than amateur radio will ever be.

I was disappointed that Kenwood had no new radios to show at Dayton this year, though the firmware upgrade to the TM-D710 will be much appreciated by the APRS community.

Actually, the IC-7200 will only do the HF bands plus 6m. The IC-7000 does those bands plus 2m and 70cm. Not sure why Icom left those bands out of the IC-7200 when they are a popular feature in the IC-7000.

The IC-7200 will only do SSB, CW, AM, and RTTY. It will not do FM. That leaves the radio lacking the ability to do 10m and 6m FM which are useful modes.

One plus in the IC-7200's favor that I wish other radio manufacturers would adopt is that has a USB port for doing computer control rather than a serial port or some proprietary interface.

Even though the IC-7200 brochure mentions "rugged design for outdoor use", I don't see a water resistance spec or any kind of Mil-Spec for resistance to environmental damage.

Finally, the price quote I heard Friday morning, which is not cast in stone because the radio has not been approved by the FCC and is not yet available for sale, was around $1500. Compare that to the Yaesu FT-450, which has similar band coverage, similar IF DSP, and similar size, but at half the price.

1410. American Red Cross Responds to ARRL Concerns Regarding Background Checks

Yahoo group: IndyHamRadio
Date: 2008-05-20 05:08:24 UTC
From: Mark Thompson
Topic: 1410 Message: 1410

American Red Cross Responds to ARRL Concerns Regarding Background Checks
In November 2007, ARRL President Joel Harrison, W5ZN, wrote to the American Red Cross (ARC) regarding concerns voiced by ARRL volunteers. In 2006, the Red Cross stated it would implement background checks that included, among other things, a credit check and a "mode of living" check for its staff and volunteers, including ARES volunteers providing services to the Red Cross during disasters. ARRL saw these portions of the background check as unneeded and inappropriate for ARES service.
In a letter dated May 8 of this year, Armond T. Mascelli, ARC Vice President for Disaster Response Services replied to President Harrison: "I can now report back to you that [these] actions have been completed and changes have been instituted which I trust resolves the concerns detailed in your letter. This effort took considerably more time and attention than originally envisioned, but I believe the results will now benefit our respective organizations.
"A new background consent form now [is] to be used by all Red Cross chapters for ARRL members and other partner organizations. The form and related process is limited to the name and social security number verification of the individual, and a criminal background check. References and suggestions to other related investigative possibilities have been stricken."
ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, announced the resolution at the ARRL ARES forum at the Dayton Hamvention® and received hearty applause. "We are very pleased that the American Red Cross has addressed some of the issues that we raised regarding their background investigations and that we can move forward in a relationship that has existed for a long, long time," Harrison said. "The American Red Cross and the ARRL have shared a productive relationship for many years which has been of benefit to both the organizations and to the public. We are glad that throughout the past months we have been able to negotiate the issues that we had and have finally come to a resolution."
What's Next?
With the background check issue apparently resolved, the ARRL will be working with the ARC in the negotiation and creation of a draft for a new Memorandum of Understanding (MOU) or similar document to replace the one which expired last year; Dura and Keith Robertory of the ARC will be leading the effort. When complete, the draft of the MOU will be presented to the leadership of both organizations for approval.
"The ARRL is very pleased that the American Red Cross has responded appropriately to our concerns about the background check issue," said ARRL Chief Executive Officer David Sumner, K1ZZ. "We believe it now will be possible to go forward to negotiate a statement of understanding between the two organizations. We look forward to renewing and expanding the relationship with the Red Cross."

1411. ARRL Introduces "Fifth Pillar" at Dayton Hamvention®

Yahoo group: IndyHamRadio
Date: 2008-05-21 20:54:14 UTC
From: Mark Thompson
Topic: 1411 Message: 1411

ARRL Introduces "Fifth Pillar" at Dayton Hamvention®
On Saturday, May 17 at the Dayton Hamvention, ARRL President Joel Harrison, W5ZN, plans to announce that the League will expand its identity program to include greater emphasis on technology. Harrison explained that "Ham radio operators, and particularly ARRL members, closely identify with current and emerging radio technology. Today, we are naming 'technology' as ARRL's new fifth pillar." ARRL's other four pillars, the underpinnings of the organization, are Public Service, Advocacy, Education and Membership. "For hams, expanding the four pillars to include technology will reinforce one of the organization's guiding principles -- that ham radio is state-of-the-art, innovative and relevant," he said.

"Radio amateurs have entered a new era. More than a dozen Amateur Radio satellites are presently in orbit with more to come. Software is expanding the capabilities of their radio hardware and communication by digital voice and data is expanding rapidly among hams," Harrison said.

In addition to the new fifth pillar, the ARRL has launched a year-long ham radio recruitment campaign emphasizing the Amateur Radio Service as a scientific national resource. The campaign invites newcomers to discover ham radio in the 21st Century -- where hams are using science, technology and experimentation to explore the radio spectrum. "For more than 90 years, the ARRL has been at the forefront of technology, encouraging experimentation and education through its license training resources, publications and periodicals. ARRL provides its members with top-notch technical information services, trusted product reviews and radio spectrum advocacy," Harrison said. "The ARRL Laboratory is a centerpiece of ham radio technology, contributing to radio electronics experimentation, spectrum development and advocacy, and radio frequency engineering." Harrison also noted that many hams attribute their affinity to "Amateur" Radio as launching their professional careers in radio engineering, satellite communications, computer science and wireless communications.

"This is less about defining a new course for Amateur Radio, but simply recognizing a course that has always been a precept of radio amateurs and the ARRL," he said. Referring to the federal rules and regulations for Amateur Radio, Harrison explained that one of the defining principles of the Service's very creation by the government is the amateur's proven ability to contribute to the advancement of the radio art. Harrison remarked, "Today's technology is nothing new to ham radio!"

1415. Repeater updates?

Yahoo group: IndyHamRadio
Date: 2008-05-27 21:25:26 UTC
From: Shawn Tovey
Topic: 1415 Message: 1415

I am updating my website and radio programs with repeaters in the SOUTHERN parts of Indiana. I would like some help. I have noticed that some websites are either outdated or just missing some information.

If you wouldn't mind, please email me a list of the repeaters you use often in Indiana from Indianapolis and south. Please include any details about the repeater that you know such as; Frequency, Tone, Call Sign, Location (specific if possible), club affiliation, and so on.

Thank you very much.

If anyone has the Icom CS-208 Programming software and would like a copy of my profile, I would be more than happy to share.

Be well and 73,

Shawn Tovey KC9LII

1417. 144 MHz beacon

Yahoo group: IndyHamRadio
Date: 2008-05-28 20:41:14 UTC
From: Zack Widup
Topic: 1417 Message: 1417

This weekend I copied a new 144 MHz CW beacon I have never heard before. The beacon was on 144.275. I thought I copied KB9UZT as the callsign but that call is currently unassigned in the FCC database.

The grid locator given was simply EM69. This would pretty much place it in Indiana.

Does anyone have any info on this beacon? Did I miscopy the call? There WAS a lot of QSB on the signal at the time and it was rather weak.

73, Zack W9SZ

Why not get a few folks together and use Ham Test Online
http://www.hamtestonline.com/?

I have used this service. It is as good a program as there is out
there. Have a few "elmers" who are available to answer questions but
have the new folks use Ham Test Online on a daily basis (about 20
minutes per day).

Just remember that many individuals just do not have the time to go
to a class. Most classes I have ran generally will lose half of the
students by the end of the class. An online teaching method is more
in tune with how our society works. By having "elmers" work like an
online tutor (or by phone), we can provide the human touch to back up
the learning.

Just something to think about... N9NWO

For Immediate Release from the Jackson County Public Library

Learn to Be a Ham Radio Operator

Contact: Becky Brewer, Head of Information Services 522-3412 ext. 239

It is not too late to sign up for Ham Radio Operator class at the Seymour Library. The class will hold an introductory session 3:30 – 4:45 pm on Saturday, May 24, but attendees may also begin attending the class a week later on Saturday, May 31. This program will take dedication of seven to eight Saturday afternoons from 3:30-4:45 pm, including testing for licensing, and will require no equipment on the part of participants. The testing will take place from 11 am-2 pm July 19. The class is presented by the Jackson County Amateur Radio Technical Society Inc. (JCARTS), a non-profit organization, and is free. However, JCARTS recommends the students purchase The ARRL Ham Radio License Manual which costs 24.95. Registration and prepayment of $24.95 to JCARTS for a book is preferred, at the Seymour Library, 303 W. Second St.

For more information, contact Becky Brewer at 522-3412 ext. 239, or Shawn Tovey at 358-7623 or kc9lii@....

Although this class was started for new techs, I invite anyone who is looking to upgrade to come to the classes to study with others. I will attend some of the classes as both an instructor and to study. I am preparing to upgrade to general class on June 2nd at the Heartbeat Cafe in Seymour. If anyone would like to get together before the test session to cramp and get a bite to eat, please email me. I sure could use the extra help!

I would also like to make sure that everyone has been aware of the following testing sessions in Jackson County hosted by the Seymour VE Team.

June 2, 2008 - The Heartbeat Café
1537 W. Tipton Street
Seymour, Indiana
Registration 6:00PM
Testing 6:30PM
Retesting not available

July 19,2008 - Jackson County Public Library
303 W. Second Street
Seymour, Indiana
Registration 11:30AM
Testing 12:00PM
Retesting until 2:00PM

Be well and 73,

I just checked out hamtestonline.com/

Yeah, that's good for those who can't make a class.

The $49.95 fee is actually cheaper than ONE book plus the
price of gas going to/from a class a few times.

However, like you said, you still need an elmer for
people who are not adept at self-teaching, or visual
learners.

Some people have to both hear and see, and get their
questions answered before all the necessary tidbits
of information get stored in their mental filing cabinet.

1426. "Chick Factor Night" by Indy Motor Speedway ARC

Yahoo group: IndyHamRadio
Date: 2008-05-29 18:48:52 UTC
From: Mark Thompson
Topic: 1426 Message: 1426

"Chick Factor Night" at W9IMS on May 24

"ALL CHICKS, ALL THE TIME":
MAKING A SPECIAL EVENT MORE SPECIAL

Fewer than 15 percent of all American amateur radio operators are female, but special event enthusiasts should have no trouble finding YLs on the air this Saturday, May 24, thanks to a first-time "event-within-an-event" presented by the Indianapolis Motor Speedway Amateur Radio Club.

Since early May, the club has been operating its annual special event station, W9IMS (http://www.w9ims.com), in commemoration of the upcoming Indianapolis 500.

But for three straight hours on the night before the race ? 2100 UTC Saturday to 0000 Sunday ? it'll be "all chicks, all the time" as the club observes Chick Factor Night. During this time, only YLs will be allowed behind the W9IMS microphones, and any OMs on the premises will be required to serve snacks and beverages to the busy ladies.

The chivalrous celebration seems appropriate, considering that the legendary 500-mile auto race will feature a record number of female drivers (three ? Danica Patrick, Sarah Fisher and Milka Duno) for the second straight year. W9IMS, the official amateur radio station of the Indianapolis Motor Speedway, has operated an Indy 500 special event station annually since 2004, but the YL-only mini-event is a first.

So what's a Chick Factor?

As explained in the November 2007 QST article "Girl Meets Brickyard," which highlighted 11-year-old Extra Class YL Amanda Feriante, Chick Factor refers to the ham radio phenomenon in which a female operator can instantly create a pile-up (and break a pile-up) with the mere sound of her voice. It also applies to the YLs themselves in addition to being the name of a new YL-oriented club, still in the process of organizing, called Chick Factor International (W9YL).

Amanda, AF6YL, will be back at W9IMS this year, and she'll be joined on Chick Factor Night by several other female club members and guests. The "scheduled to appear" list includes mom Kortnee Feriante, KF6Y; Heather Heininger, KB9ZLB; Kim Oberc, KC9IRN; and Emily Bishop, WE4MB. The club has also issued an open invitation to other YLs who reside or plan to be in the Indianapolis area Saturday evening.

The W9IMS Comm Center can put several transmitters on the air simultaneously, so there should be no shortage of opportunity to work the YLs. Look for W9IMS on several of the following frequencies (plus or minus): 3.840 MHz, 7.240, 14.240, 18.140, 21.340, 28.340, 50.140, 144.240 SSB and 146.52 simplex FM. For updated frequency information, look for DX spots at sites such as DX Summit ? http://oh2aq.kolumbus.com/dxs/

As a special tribute to a Chick Factor pioneer, one of W9IMS's YL ops will conduct a CW sked at 2100 UTC Saturday with Denice Stoops (KI6BBR) on 14.050 MHz. Denice ? the first

female telegrapher hired at historic maritime radio station KPH (http://www.radiomarine.org/kph-proj.html) ? will operate K6KPH, the Maritime Radio Historical Society station, located at the KPH facility at Point Reyes National Seashore in California.

Any station that works W9IMS (and any SWL who receives it) during the month of May is eligible for a special Indy 500 QSL card. The club also awards a certificate for working or receiving all three of its annual special event operations in any combination of years.

But nothing additional will be given to stations for working/tuning in one or all of the Chick Factor participants.

Then again, when it comes to chatting with YLs, when have awards ever mattered?

So, what about setting up a "virtual class"? "Elmers" would not even have to live near you. Purdue and IU already have tele-classes with online professors. We use something like Ham Test Online and have experienced hams (mentors/elmers) available across the state.

Wonder if we could set up something like that?

Yeah, that's "do-able", with a certain type of people.

You could learn that way, and I could learn that way.

But, the "low tech" people I'm thinking of would first need
to take a training class on how to use an online seminar/class. :-)

There are many people who just need a real live person
in the room to spoon feed them things in order to learn.

The people I'm hoping to send to live Ham classes are
not already computer-savvy people. They are not going
to become experimenters or home-brewers, and have never
and will never pick up a soldering iron.

A few might be, and I'll send them to www.hamtestonline.com,
or have them get the Gordon West Tech book.

And even of the low-tech non-computer-savvy people, some
of them are comfortable with memorizing the answers to
the question pool, but most need at least some theory,
because they have nowhere to "plug in" the things they
memorize. Without that plug-in, or link, or glue
between the new fact and some pre-existing thing in
their brain, they don't learn.

Some are the type of people who say "Why?" all the time, not
because they are curious, but because they just can't
accept a new "thing" without associating it with a real
life application, and something that they already have in
their brain.

It's just a way that many people have to learn. In extreme
cases, it's like someone on the Titanic saying they're not
going to accept that the ship is sinking (and get on a lifeboat)
until they know WHY the ship is sinking. The new reality

goes against previous "facts" so they need the "why".

There is a certain type of learning (or personality) that
I'm trying to describe. But I forget the actual label
of it. I often fall into it when I'm confronted with
learning something that I'm not naturally interested in.

Bottom line: If we want to attract people to Ham Radio who are
not already computer or tech geeks or Poindexter types, we have
to present things in ways that non-computer non-tech
non-Poindexster types will easily accept, digest, and act upon.

Without recruitment, Hams tend to be a self-selecting group
of techno-geeks. Please notice I only said "tend to".

The announcement just appeared on QRZ.com and if you read the announcement carefully you'll notice the following paragraph:
Any station that works W9IMS (and any SWL who receives it) during the month of May is eligible for
a special Indy 500 QSL card. The club also awards a certificate for working or receiving all three of
its annual special event operations in any combination of years.73, Mark, WB9QZB

1433. GET READY FOR THE UPCOMING ARRL JUNE VHF QSO PARTY

Yahoo group: IndyHamRadio
Date: 2008-05-30 19:49:17 UTC
From: Mark Thompson
Topic: 1433 Message: 1433

GET READY FOR THE UPCOMING ARRL JUNE VHF QSO PARTY

June is just about here, and according to ARRL Contest Branch Manager Sean Kutzko, KX9X, that means the VHF bands are starting to get some steam. "If you've never experienced the fun of VHF+ operating, the ARRL June VHF QSO Party is a great place to start. With many HF radios now offering at least 6 meter SSB/CW capabilities -- and some offering 2 meters and 70 cm as well -- any amateur with a Technician class license or higher can experience long-haul communication on the VHF bands," he said.

Known as the "Magic Band," 6 meters can be quiet for days at a time, and then suddenly explode with signals when the E layer of the ionosphere cooperates. There's no guaranteed way to predict when 6 meters opens, which is why the propagation mode is called "Sporadic-E." When 6 meters opens, contacts several hundred miles away can be made with relatively modest equipment; 50 W and a simple dipole antenna can do wonders during a good opening.

When operating on VHF, Kutzko said that your Maidenhead grid square is the common geographical information exchanged. For complete information on grid squares and how to tell what grid square you are in, visit the ARRL's web site <http://www.arrl.org/locate/gridinfo.html>.

Kutzko advises that there are a few things to know about operating on 6 meters: In the US and Canada, there is a "calling frequency" on 50.125 MHz USB. Many stations monitor this frequency to listen for band openings. Stations can call CQ on the calling frequency, and if somebody answers, the stations will find a new frequency on which to conduct their QSO. It is considered poor etiquette to monopolize the calling frequency for QSOs.

Most SSB activity will take place between 50.125 MHz and 50.250 MHz. If conditions are exceptional, Kutzko said you may hear signals above 50.250: "CW signals can be found from 50.100 MHz to 50.080 or so. The frequencies between 50.100 and 50.125 MHz are a 'DX Window,' meaning it is reserved for QSOs between W/VE and DX stations. Please do not make stateside-to-stateside QSOs in the DX Window."

Kutzko said that getting on 6 meters is easy: "A dipole for 6 meters is only 9 feet, 4 inches long and is an easy construction project. Try to get the dipole in the air as high as possible, but even 15 feet off the ground will make some QSOs. If you have an antenna tuner that can handle 6 meters, you can try loading up another of your antennas on 6 meters with reasonable success."

Because VHF+ antennas are relatively small, Kutzko said that many amateurs operate from portable locations, such as a hilltop or a campground. Others operate the contest as a "rover," operating from their car or truck while transmitting from multiple grid squares over the contest period. "Tracking rovers during the contest is almost as much fun as the contest itself," he said.

The ARRL June VHF QSO Party runs from 1800 UTC Saturday, June 14-0300 UTC Monday, June 16. Be sure to use those extra bands on your transceiver and get in on the fun you've been missing on 6 meters and up! For more information on this contest, please be sure to check out the Contest Rules <http://www.arrl.org/contests/rules/2008/june-vhf.html>.

Also, don't be afraid to ask the other op. The experienced ops will probably be able to tell you from your location which grid you are in. It is pretty common to work someone who doesn't know their grid, and most of us are more than happy to help out a new guy:-)

>Most SSB activity will take place between 50.125 MHz and 50.250 MHz. If
>conditions are exceptional, Kutzko said you may hear signals above
>50.250: "CW signals can be found from 50.100 MHz to 50.080 or so. The

>is reserved for QSOs between W/VE and DX stations. Please do not make
>stateside-to-stateside QSOs in the DX Window."

Also, cross mode QSO's are common, and legal, on VHF. If you hear someone calling CQ but can't get their attention, try calling them with CW. Don't be afraid to use CW in the "SSB portion of the band".

Be aware there are often "peak times" during the contest. Early to mid morning, and evenings tend to have the most activity. But a band opening at any time will bring everyone out to play!

Band openings on 6 tend to reduce the activity on 2m. Unless 2 meters opens as well, then it gets real fun:-)

VHF contesting is a blast. If you haven't tried it, get on and make a few QSO's. It's a whole different world from HF contesting.

I'll be Rover in EM68, EM78, EM69, and EM79 in southern Indiana. Can't afford the gas for more! I'll have a big signal on 6,2, and 432.

Hope to work you!

1437. K9ZF /R in the June VHF QSO Party

Yahoo group: IndyHamRadio
Date: 2008-06-07 18:36:22 UTC
From: Dan Evans
Topic: 1437 Message: 1437

Greetings Group;

The big June VHF QSO Party is nearly here! Next weekend to be exact, check here for details:

http://www.arrl.org/contests/rules/2008/june-vhf.html

I will be working the "usual 4" grids. I'm planning to start the contest in EM69 near Nashville, IN,
catch EM79 near Columbus IN, Saturday evening, start Sunday morning in EM68 near Salem, IN, and head for
EM78 near Henryville, IN, sometime in mid-morning to afternoon. I'll stay with EM78 until the evening,
which wraps up the contest here.

Just 4 grids this time. With gas at $4.15/gallon here I just can't afford to hit more. If things were different,
I would hit at least 6 or 8.

On a positive note, I finally have the K9ZF 'no budget' Rover station back up to par. Only 3 bands, but I should
have a strong station on each;

6m- FT897D, 100 Watts, Moxon at ~27'

2m- FT897D, 160 Watts, 10 ele at ~21'

432- FT897D, 100 Watts, Big M2 Yagi at 24'

Look for me on 6 or 2 near the SSB calling frequencies [50.125 or 144.200] Or spend some time on the band calling CQ
and I, and many others, will happily find you!

Logging and voice/cw keying by RoverLog. I may even try some WSJT Saturday evening, although I have been off the
digital modes so long I may have forgotten how:-)

No APRS this time out. Since the ARRL decided to allow it’s use, I had hoped to have an APRS capable station for
this contest, but didn't make it. Maybe in September:-)

I will have plenty of pics of the newly outfitted K9ZF 'no budget' Rover after the contest. Last time out it seems
like I spent more time taking pics than making QSO's! Hopefully that will change this time out:-)

Today's Rover Tip: Bring along your MP3 player. Most of them have a neat "voice recorder" function. This is a

great way to log those random QSO's while in motion safely. Just don't forget to speak the date, time, and band info!
This is when I catch most of my FM contacts.

73

1442. Intro and questions

Yahoo group: IndyHamRadio
Date: 2008-06-08 15:59:21 UTC
From: C L
Topic: 1442 Message: 1442

I am the Vice President of the Central Indiana REACT, Inc Team we are a newly formed REACT Team and we would like to find out how we might interact with or assist Amateur Radio Disaster Communications Teams in the central Indiana area.

Radio Emergency Associated Communications Teams or REACT is a public service organization comprised of private radio operators serving travelers and their communities alike with radio communications. Member volunteers are dedicating to improving their communities by providing voluntary, two-way communications.

Purposes include:

* The correct usage of CB Emergency Channel 9
* Developing the skilled use of the CB Radio Service, GMRS (UHF),
* Amateur with packet, BBS, Cellular and other radio services as additional sources of communications in emergencies
* Coordinating efforts with other emergency organizations including
* Police, FEMA, NOAA, RACES, ARES, NOVAD, the Salvation Army and the American Red Cross
* Providing public service communications for travelers and their local communities
* Using their radios in the interest of public safety
* Many teams monitor Citizens Band [CB] Radio Emergency Channel 9.

Many also use radios called General Mobile Radio Service (GMRS) and have access to local GMRS Repeaters, generally on the 462.675 MHz frequency. Some teams have more than one repeater, or may be on different frequencies.

When Seconds Count -- Since 1962, REACT volunteers have been "on scene" providing critical communications and radio monitoring services. Our member teams work to "assist in and improve" their local communities, work an untold number of small local emergencies ranging from single family house fires, multi-unit apartment fires, brush fires, chemical spills, train derailments, to assisting during shelter operations by the Red Cross, Salvation Army or other agencies during floods, and of course our relentless monitoring of various two-way radio frequencies. Because of our efforts, REACT is a recipient of the President's Volunteer Action Award.

As a newly formed REACT Team we would like to know about interaction between Amateur Radio and REACT, is there a history of working together here in Indiana? If not who would be willing to work with us to make a history?

At the current time we do not have any Amateur Radio Operators in the Team yet, but we would like to; we desire to be an all spectrum, all formats radio team.

I look forward to hearing from you soon.

Thank you,

C. L. Hankins II WQHF776

Vice President

Central Indiana REACT, Inc. Team 6137

A Nonprofit Organization of Citizens Interested In Radio

Communications and Committed To Public Service

1443. 2008 ARRL/TAPR DCC (Digital Communications Conference), September 26 - 28

ARRL/TAPR DCC (Digital Communications Conference),
September 26 - 28, 2008, Chicago, IL

More Information about the DCC at: http://www.tapr.org/dcc.html
Mark your calendar and start making plans to attend the premier technical conference of the year, the 27th Annual ARRL and TAPR Digital Communications Conference to be held September 26-28, 2008, in Chicago, Illinois. The conference location is the Holiday Inn Hotel, Elk Grove Village IL
The ARRL and TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work, and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications.
Topics include, but are not limited to:
Software defined radio (SDR), digital voice (D-Star, P25, WinDRM, FDMDV, G4GUO), digital satellite communications, Global Position System (GPS), precision timing, Automatic Position Reporting System® (APRS), short messaging (a mode of APRS), Digital Signal Processing (DSP), HF digital modes, Internet interoperability with amateur radio networks, spread spectrum, IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio, using TCP/IP networking over amateur radio, mesh and peer to peer wireless networking, emergency and Homeland Defense backup digital communications, using Linux in amateur radio, updates on AX.25 and other wireless networking protocols.

Three-Day Conference
(Friday, Saturday, Sunday)
Technical and introductory sessions will be presented all day Friday and Saturday.
Friday Evening Social. Join others at the conference for a Friday evening social get together.

Saturday Evening Banquet with an invited speaker that concludes with award presentations and prize drawing.

The ever-popular Sunday Seminar that focuses on a topic and provides an in-depth four-hour presentation by an expert in the field.

Technical Sessions

This is a must attend conference for technically inclined amateurs. Now, more than ever, amateur radio needs this great meeting of the minds to demonstrate a continued need for our current frequency allocations by pushing forward and documenting our achievements. The ARRL and TAPR Digital Communications Conference is the best way to record our accomplishments and challenge each other to do more.
Just review past DCC proceedings to the see the depth of topics presented since 1981.

Introductory Sessions

The ARRL and TAPR Digital Communications Conference is for all levels of technical experience, not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications.
Introductory sessions are scheduled throughout the conference to introduce new technical topics for beginners and experts alike. Here are some of the introductory seminars scheduled:

Banquet Speaker

Each year the conferences invites top amateurs in the field to speak. Past speakers have included Geoff Baehr, N6LXA, Chief Network Officer of Sun Microsystems, Dale Hatfield, W0IFO, Chief of the FCC's Office of Engineering and Technology, Yutaka Sakurai, JF1LZQ, Vice President of Japan's Packet Radio User's Group, and Ken Kaplan, N0GZ, who wrote the OS/9 operating system.

Sunday Seminar
  Software Radio Through the Looking-Glass
Phil Harman, VK6APH
One of the most exciting, and rapidly evolving, aspects of Ham Radio is that of Software Defined Radios. What was initially left to technical minded experimenters is now starting to move into the main stream. The latest SDRs offer performance equal to the best analogue radios on the market.
For those brought up on analogue radios there is quite a learning curve to understand exactly how these new radios work, what they do well and what shortcomings they have. Phil will guide us through the basics of SDRs right up to the very latest techniques that digitise signals directly at the antenna socket. Using diagrams and a minimum of math he will cover such subjects as front end design, mixers, why we need I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency Power Amplifiers.

Demonstration Room
Each year at the DCC a separate (and lockable) room is provided for people to bring and show off their latest projects. Tables and power will be provided. Bring your equipment and display for all to see, learn, and ask questions about. Be sure to bring a small sign and/or flyer naming and describing your project.

Hotel
Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, IL.
It is highly recommendedthat you book your room prior to arriving.
A block of rooms at the special DCC room rate of $89.00 single/double.

This special rate is good until September 7, 2008or until the block of rooms are all sold out.
To book your room, call the hotel directly (phone numbers below) and mention the group code TAPR DCC when making reservations.
Be sure to book your rooms early!
